Contidos	
Temas	Subtemas
Development of the student's Master's Thesis (TFM), which represents a project in the field of any of the SEAS 4.0 master degree topics.	
Once the student has passed all courses and has completed the Master's Thesis, its defense will take place during February in Naples (UNINA).	
This subject includes the completion of internships in a company .	
At the beginning of the third semester, the four consortium universities (UNINA, UDC, UNIZG, TUHH), will present the students different alternatives for carrying out internships in companies and topics for TFM, as well as the professors who will act as tutors for them.	
The internships may be carried out in industrial partners or in R&D centers or institutions, and the associated TFM could be related to the corresponding practices carried out by the student. It is not necessary that the internship and the TFM are carried out in the same location, but its topic must be related to the topics of the SEAS 4.0 degree.

Metodoloxías	
Metodoloxías	Descrición
Saídas de campo	The students will carry out an internship in real organizations, where they will be able to apply the knowledge, methods, techniques and technologies acquired and developed during their studies.
Traballos tutelados	The student produces a complete report that describes the practical work about a significant topic. This training activity applies to courses such as internship and master thesis (TFM), in which the student must present a memory that summarizes the work done in both cases..

Observacións	

To help in achieving a sustainable environment and to get the objective of number 5 action of the "Ferrol Green Campus Action Plan" (Healthy and environmentally and socially sustainable research and teaching): The assignments to be done in this course:- Will be required in digital format.- Will be delivered using Moodle, with no need to print them. In case it is necessary to print them:- Plastics won't be used.- Two side printing will be used.- Recycled paper will be used.- Printing drafts will be avoided. A sustainable use of the resources should be done, together with the prevention of negative impacts on the environment. In this course, an effort will be pursued towards the incorporation of gender inclusion aspects: no sexist language will be allowed, bibliography from authors of both genders will be used, and the participation of students of both gender in class will be promoted. The situations of gender discrimination will be detected, and actions will be implemented to correct them. The full integration of students who for physical, sensorial, psychic, or socio-cultural reasons may have difficulties in their academic life will be promoted.
