

Teaching Guide

Teaching Guide				
Identifying Data				2019/20
Subject (*)	Advanced Cellular Biology		Code	610441003
Study programme	Mestrado Universitario en Bioloxía Molecular , Celular e Xenética			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	First	Obligatory	3
Language	SpanishGalician			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía			
Coordinador	Yañez Sanchez, Julian	E-mail	julian.yanez@udc.es	
Lecturers	Díaz Prado, María Luz	E-mail	luz.diaz@udc.es	
	Manso Revilla, Maria Jesus		maria.jesus.manso@udc.es	
	Yañez Sanchez, Julian		julian.yanez@udc.es	
Web				
General description	<p>Cell biology as a current discipline has grown and matured significantly so that its conceptual boundaries are often diffuse and difficult to define. Thus, Cytology, Biochemistry, Molecular Biology, Genetics and Cell Physiology cell overlap in many respects. In fact, any substantial advance in either of these areas involves using methodologies typified as specific in one or more areas.</p> <p>This course focuses on the structure and function of cellular components with a holistic view of the interactions between these components to ensure proper functioning of the cell. We realize that it is not possible to cover in a single course all the continuous advances in depth, so we selected aspects of current relevance to give an idea of the complexity underlying cellular processes.</p> <p>Since this is an advanced course, it is assumed that students have basic knowledge of cell biology, genetics, physiology, biochemistry and molecular biology.</p>			

Study programme competences / results

Code	Study programme competences / results
A1	Skills of using usual techniques and instruments in the cellular, biological and molecular research: that are able to use techniques and instruments as well as understanding potentials of their uses and applications.
A2	Skills of working in a sure way in the laboratories knowing operation handbooks and actions to avoid incidents of risk.
A6	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A7	Skills of knowing and analyzing specific cellular systems as stem cells, nerve cells, cells of the immune system, or other cells related to several pathologies.
A13	Skills to become a professional in health, pharmacy, veterinary, animal production, biotechnology or food sectors.
B5	Correct oral and written communication on scientific topics in the native language and at least in another International diffusion language.
B9	Skills of preparation, show and defense of a work.
C1	Adequate oral and written expression in the official languages.

Learning outcomes

Learning outcomes	Study programme competences / results		
Skills of understanding the functioning of cells through the structural organization.	AR6 AR7	BR5 BR9	CC1
Skills to apply immunohistochemical techniques to the study of cell components	AR1 AR2 AR13		

Contents	
Topic	Sub-topic
Introduction to cell	Cell Domains and the origin of multicellularity. Integrative view of the eukaryote cell
Structure and dynamics of the cell nucleus	Structure of nuclear envelope Nucleocytoplasmic traffic. Cell nucleus organization: chromatinic territories and nuclear subdomains.
Biogenesis, trafficking and functions of the cell endomembrane system	Structure and membrane domains. Membrane compartments and vesicular trafficking. Traffic RE-Golgi complex. Endosomes and endocytosis. Traffic between the Golgi complex and endosomes. The secretory pathway of the Golgi complex: conventional and unconventional exocytosis. Lipid trafficking between compartments. Post-translational targeting of cytosolic proteins to organelles. Degradation of cellular components.
Cytoskeleton and cell dynamic.	Microtubules and associated proteins. Microtubule complex structures. Microfilaments and associated proteins. Cell motility and contractile systems. Cytoskeleton and cytokinesis. Intermediate filaments. Septins.
Interactions cell to cell and cell to extracellular matrix	Cell adhesion and junctions Extracellular matrix molecules Pathological alterations of the extracellular matrix.

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student?s personal work hours	Total hours
Guest lecture / keynote speech	A6 A7	8	16	24
Document analysis	A6 A13 B5 B9 C1	4	12	16
Laboratory practice	A1 A2	10	20	30
Mixed objective/subjective test	A6	2.5	0	2.5
Personalized attention		1	0	1
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Face sessions of approximately 60 minutes on the contents of the program. For a full exploitation of these sessions, it is recommended that students have previously read on their own fundamental aspects of these topics in the recommended texts.
Document analysis	It will consist of individual reading of recent research articles or reviews in Cell Biology designated by the lecturer complementing the given lectures. In classroom sessions each student will present a brief summary in limited time and will provide the basis for a posterior general discussion.
Laboratory practice	It will consist of the application of immunohistochemical methods for the analysis and study of certain cellular structures or components.

Mixed objective/subjective test	It will consist of an exam with choice questions and/or short questions on the contents of the topic treated in lectures and seminars.
---------------------------------	--

Personalized attention	
Methodologies	Description
Guest lecture / keynote speech	Students will be attended personally for any question raised along the course (in person, via e-mail and/or skype)

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Document analysis	A6 A13 B5 B9 C1	The degree of understanding of the subject and its presentation in the indicated time so as original graphical abstract will be assessed. Active participation in the discussion of presentations is also valued.	30
Mixed objective/subjective test	A6	It will consist of short answer and multiple choice questions on the contents of the topics covered in the keynote sessions and seminars.	70

Assessment comments
<p>Part time students may substitute attendance of seminars (Journal Club) by a single written review paper on some aspect related to the syllabus and agreed with the lecturer.</p> <p>Exceptionally, under justified reasons (part-time learning or particular learning circumstances), in case the student could not follow the assessment activities, the teacher can adopt appropriate measures aimed not to hurt their score.</p> <p>In the second call (July) only the results of the examination will be taken into account for final qualification</p> <p>Part time students could make their exams presentially or on line (via moodle or skype).</p> <p>Honors will be preferably granted among students presented in the first call.</p>

Sources of information	
Basic	<ul style="list-style-type: none"> - Pollard, T.D; Earnshaw WC (2002, 2008). Cell Biology. Saunders - Alberts, B.; Johnson A.; Lewis, J.; Raff, M.; Roberts, R. & Walter, P (2008). Molecular Biology of the cell. Garland
