| General description      | This material is an advanced approach to the study of the eukaryotic chromosome structural and dynamic point responsible for packaging, transmission, maintenance and regulation of DNA function in different cellular contexts system. The Contents aim to complete previous knowledge acquired by students in matters related to Genetics and Molecular Biology at the undergraduate or graduate studies, helping to establish a conceptual view from up state of the art research. |        |                        |           |

## Study programme competences

| Code | Study programme competences                                                                                                                                                                                              |
|------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A1   | Skills of using usual techniques and instruments in the cellular, biological and molecular research: that are able to use techniques and instruments as well as understanding potentials of their uses and applications. |
| A3   | Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.                                                                             |
| A6   | Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.                                                                             |
| A11  | Skills of understanding the structure, dynamics and evolution of genomes and to apply tools necessary to his study.                                                                                                      |
| B1   | Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.                                                                                                    |
| B2   | Skills of decision making for the problem solving: that are able to apply theoretical knowledges and practical acquired in the formulation of biological problems and the looking for solutions.                         |
| B3   | Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions and to prepare reasoned reports on scientific and biotechnological questions  |
| B4   | Organization and work planning skills: that are able to manage the use of the time as well as available resources and to organize the work in the laboratory.                                                            |
| B5   | Correct oral and written communication on scientific topics in the native language and at least in another International diffusion language.                                                                             |
| B6   | Skills of team work: that are able to keep efficient interpersonal relationships in an interdisciplinary and international work context, with respect for the cultural diversity.                                        |
| B7   | Personal progress skills : that are able to learn from freelance way, adapting to new situations, developing necessary qualities as the creativity, skills of leadership, motivation for the excellence and the quality. |
| B9   | Skills of preparation, show and defense of a work.                                                                                                                                                                       |
| C1   | Adequate oral and written expression in the official languages.                                                                                                                                                          |
| C2   | Mastering oral and written expression in a foreign language.                                                                                                                                                             |
| C3   | Using ICT in working contexts and lifelong learning.                                                                                                                                                                     |
| C4   | Acting as a respectful citizen according to democratic cultures and human rights and with a gender perspective.                                                                                                          |
| C5   | Understanding the importance of entrepreneurial culture and the useful means for enterprising people.                                                                                                                    |
| C6   | Acquiring skills for healthy lifestyles, and healthy habits and routines.                                                                                                                                                |
| C7   | Developing the ability to work in interdisciplinary or transdisciplinary teams in order to offer proposals that can contribute to a sustainable environmental, economic, political and social development.               |
| C8   | Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.                                                                                     |

## Learning outcomes

| Learning outcomes                                                                                                                                                                                | Study programme competences |                                                      |                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|------------------------------------------------------|------------------------------------------------------|
| Understand the knowledge of genetics from the perspective of eukaryotic chromosome as a structural and dynamic system.                                                                           | AR1<br>AR3<br>AR6<br>AR11   | BR1<br>BR2<br>BR3<br>BR4<br>BR5<br>BR6<br>BR7<br>BR9 | CC1<br>CC2<br>CC3<br>CC4<br>CC5<br>CC6<br>CC7<br>CC8 |
| Ability to understand the organization of genes, genomes and chromosomes from a comparative and focused on the relationship between structural, functional and evolutionary aspects perspective. | AR1<br>AR3                  | BR1<br>BR2<br>BR3<br>BR4<br>BR5<br>BR6<br>BR7<br>BR9 | CC1<br>CC2<br>CC3<br>CC4<br>CC5<br>CC6<br>CC7<br>CC8 |
| Increase the theoretical knowledge in the analysis of the structure, function and evolution of chromosomes in eukaryotes.                                                                        | AR1<br>AR3                  | BR1<br>BR2<br>BR3<br>BR4<br>BR5<br>BR6<br>BR7<br>BR9 | CC1<br>CC2<br>CC3<br>CC4<br>CC5<br>CC6<br>CC7<br>CC8 |

| Contents                                                  |                                                                                                                                                                                                              |

| Methodologies                  | Description                                                                                                                                                                                                                                                                                                                                        |
| Guest lecture / keynote speech | Professor transmit theoretical knowledge in keynote sessions related to the thematic blocks of matter. The contents shall comply with the previous knowledge acquired by students in their undergraduate studies or degree.                                                                                                                        |
| Seminar                        | Students will develop and produce a single seminar dossier with more specific knowledge than provided in lectures. It will be presented to the rest of his colleagues in the field corresponding to the schedule.<br>A report it will be given in writing to the teacher and will be presented orally in class.                                    |
| Objective test                 | Students will take an individual exam that will assess the knowledge acquired at the end of the course.                                                                                                                                                                                                                                            |
| Laboratory practice            | Methodologies for working with chromosomes are made.<br>Activities to apply the adquired knowledge to chromosome techniques                                                                                                                                                                                                                        |
| Oral presentation              | Referred to the seminar dossier prepared singly or jointly by the students. If the work is done in groups, each student will present a part of the seminar.<br>They quality of the report/seminary will be assessed in terms of content and references. Both the submitted written report and oral presentation will contribute to the assessment. |

| Personalized attention                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Methodologies                                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Laboratory practice<br>Oral presentation<br>Seminar | Personal attention is understood as an orientation focused on improving and increasing the previous basic knowledge of students, learning to discern the most appropriate literature to the subject of the seminars and improve the standard of scientific methodology.<br><br>The teacher will help the students solving doubts that may arise in performing the activities entrusted to it.<br>It will take in the timetable of tutorials available to the teacher. |

| Assessment                     |                               |                                                                                                                                                                                        |               |

## Assessment comments

Os alumnos semipresenciais deberán asistir a Práctica/Visita. Ademais de traballar nun seminario específico para solventar a non asistencia as sesións maxistras e as presentacións orais.

A proba obxectiva e obligatoria.

Os alumnos NO PRESENTADOS serán aqueles que non asistan a ningunha das 5 metodoloxías propostas.

## Recommendations

### Subjects that it is recommended to have taken before

Genetic Variation Mechanisms/610441005

Proteomics/610441013

Human Genetics/610441016

### Subjects that are recommended to be taken simultaneously

Protein Structure and Dynamics/610441011

Genomics /610441014

Bioinformatics and Biomolecular models /610441020

### Subjects that continue the syllabus

Stem Cells and Cell Therapy/610441009

Genetic Toxicology /610441017

Project/610441022

### Other comments

(\*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
