

		Teaching	Guide			
	Identifyir	ng Data			2020/21	
Subject (*)	Plant Biotechnology Code 610441019				610441019	
Study programme	Mestrado Universitario en Bioloxía Molecular, Celular e Xenética					
		Descrip	otors			
Cycle	Period	Yea	Ir	Туре	Credits	
Official Master's Degre	ee 2nd four-month period	Firs	it	Optional	3	
Language	SpanishEnglish					
Teaching method	Face-to-face	Face-to-face				
Prerequisites						
Department	Bioloxía					
Coordinador	Bernal Pita da Veiga, María de lo	s Ángeles	E-mail	angeles.bernal@	Dudc.es	
Lecturers	Bernal Pita da Veiga, María de lo	s Ángeles	E-mail	angeles.bernal@	Dudc.es	
	Pomar Barbeito, Federico			federico.pomar@	⊉udc.es	
Web						
General description						
Contingency plan	1. Modifications to the contents					
	They will not modify the contents					
	2. Methodologies					
	When treating of a matter of the second cuatrimestre will be able to give three situations:					
	A - To normal face-to-face Teaching, if the access to the Faculty was allowed in a schedule and aforo like the ones of					
before the pandemia. In this case would go back to a totally face-to-face system.						
	B- Hybrid teaching or semipreser	ncial, if the acces	s to the Faculty w	as restricted in schedu	ule or aforo. In this case there	
	would be a combination of face-to	o-face and on-lin	e teaching.			
	C- No face-to-face, if the access	to the Faculty wa	as totally forbidder	in this cuatrimestre. I	In this case the teaching would be	
	totally no face-to-face					
	*Teaching methodologies that are	e maintained				
	In the case A, all.					
	In the case B, introductory activities would give of rotatory face-to-face way (aforo face-to-face limited considering the final					
	students number) and to the time the class transmision on-line with Teams.					
	*Teaching methodologies that are modified					
	In the case C, introductory activities would manage totally on-line.					
	3. Mechanisms for personalized attention to students					
	Email, tutorías by Teams and forums in Moodle, with daily attention in the case of the email and forums, and previous					
	request of the student in the case of the tutorías by Teams.					
	4. Modifications in the evaluation					
	In the case A, face-to-face. In the cases B and C, on-line evaluation (Moodle and other institutional tools).					
	*Evaluation observations:					
	5. Modifications to the bibliography or webgraphy					
	In the case A, any. In the cases B and C: if it was possible alternative books and/or additional in electronic format to which					
	had access from the start of this cuatrimestre (conditioned to that publish in open in the next months or there is institutional					
	subscription), and in any additional material case ad hoc generated by the professors.					

	Study programme competences	
Code	Study programme competences	
A4	Skills to apply molecular techniques to the study of the plant cell physiology, its response to external triggers and their biotechnological	
	applications.	
A5	Skills of understanding the microorganisms' role as pathogenic agents and as biotechnological tools.	
A8	Skills of having an integrated view of the previously acquired knowledge about Molecular and Cellular Biology and Genetics, with an	
	interdisciplinary approach and experimental work.	

A10	Skills of modifying genes, proteins and chromosomes with biotechnological applications
B1	Analysis skills to understand biological problems in connection with the Molecular and Cellular Biology and Genetics.
B3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions
	and to prepare reasoned reports on scientific and biotechnological questions
B8	Critical reasoning skills and ethical commitment with the society: sensitivity in front of bioethical problems and to the ones related to the
	natural resource conservation
B9	Skills of preparation, show and defense of a work.
C1	Adequate oral and written expression in the official languages.
C6	Acquiring skills for healthy lifestyles, and healthy habits and routines.
C8	Valuing the importance of research, innovation and technological development for the socioeconomic and cultural progress of society.

Learning outcomes			
Learning outcomes	Study programme competences		
Ability to manage information: gather and interpret data, information and relevant results, draw conclusions and issue		BR1	
reasoned reports on scientific and biotechnological issues		BR3	
		BR8	
		BR9	
Knowing the importance of research, innovation and technological development in the economic and cultural advancement of	AR5	BR8	CC6
society.	AR10		CC8
Ability to understand the current state of the Plant Biotechnology and use	AR4	BR1	CC8
Basic terminology used in the field	AR8		
Adequate oral and written expression in the official languages			CC1

Contents		
Торіс	Sub-topic	
Module 1. Historical development of the Plant Biotechnology	1. The 1 <sup>a</sup> and 2 <sup>a</sup> Green Revolution	
	2. What is thePlant Biotechnology?	
Module 2. Technical approach of the Plant Biotechnology	1. Genetic engineering in plants: general concepts	
	2. Methods of obtaining of transgenic plants	
Module 3. Main applications of the Plant Biotechnology	1. Transgenic Plants applications	
	2. Phytoremediation

	Methodologies
Methodologies	Description

Introductory activities	Activities used at beginning of any teaching-learning process to obtain information regarding student competences, interests
	and/or motivations in relation to specific learning outcomes, which educators may then incorporate in their planning to create
	more meaningful, effective learning experiences based on students? existing knowledge.
Online forum	Informal discussion space for students to exchange ideas concerning specific problem or topic. Interaction takes place in
	online learning environment using asynchronous communication tools (?forum?).
Document analysis	Research skills development involving use of audiovisual and/or bibliographical documents (documentary or film extracts,
	news items, advertising images, photographs, articles, legal texts, etc.) relating to specific topic of study, with targeted analysis
	activities. Used as introduction to topic, as focus for case study, to explain abstract processes and present complex situations,
	or as strategy for synthesising content (theoretical and practical).
Collaborative learning	Guided teaching-learning procedures (overseen in person and/or using ICT methods) based on organisation of class in which
	students work together to solve tasks assigned by teacher, with aim of optimising their learning experience and that of other
	members of group.
Binary questions	Objective test in which students are required to respond to a specific question using one of two closed answer options.
	(Answer options for binary questions are ?yes/no? or ?true/false?.)

Personalized attention		
Methodologies	Description	
Introductory activities	In tutorial sessions, each student will discuss with the teacher the progress of the course, and all questions that are submitted	
Binary questions	to the content thereof.	
Collaborative learning	This tutorial sesions will be by Teams preferently, with previously date by mail.	
Online forum		
Document analysis		

Assessment			
Methodologies	Competencies	Description Qualificatio	
Binary questions	A4 A5 A8 A10 B1 B3	To minimum qualification to surpass to matter will be of 5 points	30
Collaborative learning	A4 A5 A8 A10 B1 B3	Concretion and clarity in the contents 30	
	B8 B9 C1	Consults of different sources of information	
Online forum	B1 C6	Participation of active form and proposal of new threads of conversation in the forum	20
Document analysis	A4 A5 A8 A10 B1 B3	His contribution is not a reproduction of the text of origin, but a coherent synthesis in	20
	B8 B9	which only they appear the most important appearances of the same
