Teaching Guide				
Identifying Data				2023/24
Subject (*)	Molecular Plant-Pathogen Interaction Mechanisms		Code	610441019s
Study programme	Máster Universitario en Bioloxía Molecular, Celular e Xenética (semipresencial)			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	2nd four-month period	First	Optional	3
Language	SpanishGalicianEnglish			
Teaching method	Hybrid			
Prerequisites				
Department	BioloxíaDepartamento profesorado másterPsicología			
Coordinador	Diaz Varela, Jose		E-mail	jose.diaz.varela@udc.es
Lecturers	Bernal Pita da Veiga, María de los Ángeles		E-mail	angeles.bernal@udc.es
	Diaz Varela, Jose			jose.diaz.varela@udc.es
Web				
General description	This subject is focused on the molecular aspects of plant-pathogen interaction and, in a short view, of interactions related to other organisms (herbivores, rhizobia and mycorrhizae)			

Study programme competences

Code	Study programme competences
A4	Skills to apply molecular techniques to the study of the plant cell physiology, its response to external triggers and their biotechnological applications.
A5	Skills of understanding the microorganisms' role as pathogenic agents and as biotechnological tools.
A6	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A8	Skills of having an integrated view of the previously acquired knowledge about Molecular and Cellular Biology and Genetics, with an interdisciplinary approach and experimental work.
B3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions and to prepare reasoned reports on scientific and biotechnological questions
B5	Ability to draft, represent, analyze, interpret and present technical documentation and relevant data in the field of the branch of knowledge of the master's degree in the native language and at least in another International diffusion language.
B9	Skills of preparation, show and defense of a work.
C2	Ability to know and use appropriately the technical terminology of the field of knowledge of the master, in the native language and in English, as a language of international diffusion in this field

Learning outcomes

Learning outcomes	Study programme competences		
- To understand the molecular mechanisms of plant-pathogen interaction	AR4 AR8		CC2
- To know the different mechanisms of the plant response to pathogens.	AR4 AR5 AR6 AR8		CC2
To understand and be able to use the experimental approaches to research in this field.	AR4 AR5	BR3 BR5	CC2
- Ability for critically reviewing scientific papers related to this subject.	AR5 AR6	BR3 BR5 BR9	CC2

Contents

Topic	Sub-topic
Molecular mechanisms in plant-pathogen interaction.	Recognition of the plant by the pathogen and mechanism to attack the plant. Recognition of the pathogen by the plant and mechanisms of defense. Pathogen Associated Molecular Patterns (PAMPs). Oxidative burst. Salicylates, jasmonates and ethylene. Hypersensitive response. Gene-for-gene resistance. Nonhost resistance. Induced resistance to pathogens: SAR and ISR. Npr1. Priming. Transcription factors involved in resistance.
Other interactions related to plant-pathogen interaction.	Recognition of herbivores, signalling and defense mechanisms. Rhizobium-plant interaction. Mycorrhizae.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A4 A5 A6 A8	0	40	40
Document analysis	A8 B3 B9 C2	0	12	12
Laboratory practice	A5 B3 B5 C2	0	16	16
Objective test	A5 A6 B3 B5 C2	2	0	2
Personalized attention		5	0	5
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	In this blended mode, lectures are replaced by videos, texts and other materials so that students can learn the fundamental contents of the subject. There will be virtual forums for dialogue and debate between students and lecturers on the issues addressed.
Document analysis	Reading and analysis of a primary research paper related to the subject, accompanied by its presentation in Teams by the student and further discussion.
Laboratory practice	Laboratory practices The blended students will do virtual laboratory and field practical activities designed ad hoc by the lecturers. Optionally, each blended student can request, individually, the possibility of attending the practices on the dates established for face-to-face students.
Objective test	Exam on the contents of the lectures carried out through the Virtual Campus

Personalized attention	
Methodologies	Description
Guest lecture / keynote speech Document analysis Laboratory practice	The students can ask any question about the subject, and particularly about the work to do, using Teams and email.

Assessment			
Methodologies	Competencies	Description	Qualification
Guest lecture / keynote speech	A4 A5 A6 A8	Participation in the forums about contents of the virtual lecture units.	10
Document analysis	A8 B3 B9 C2	Aspects to be assessed: Proper understanding of the paper by the student, the presentation in Teams and the participation in the discussion (including the critical review of the paper).	40
Laboratory practice	A5 B3 B5 C2	Participation in the virtual activities, as well as a written report.	20
Objective test	A5 A6 B3 B5 C2	Exam about the virtual lecture units.	30

Assessment comments

The students who pass the subject in the first opportunity, will be preferentially considered to get the highest qualification (with honors). Any academic dishonesty (plagiarism, cheating in exams, etc.) will be penalised in accordance with the provisions of the UDC regulations.
