General description	This subject is focused on the molecular aspects of plant-pathogen interaction and, in a short view, of interactions related				
	to other organisms (herbivores, rhizobioa and mycorrhyzae)				

	Study programme competences
Code	Study programme competences
A4	Skills to apply molecular techniques to the study of the plant cell physiology, its response to external triggers and their biotechnological
	applications.
A5	Skills of understanding the microorganisms' role as pathogenic agents and as biotechnological tools.
A6	Skills of understanding the functioning of cells through the structural organization, biochemistry, gene expression and genetic variability.
A8	Skills of having an integrated view of the previously acquired knowledge about Molecular and Cellular Biology and Genetics, with an
	interdisciplinary approach and experimental work.
В3	Skills of management of the information: that are able to gather and to understand relevant information and results, obtaining conclusions
	and to prepare reasoned reports on scientific and biotechnological questions
B5	Ability to draft, represent, analyze, interpret and present technical documentation and relevant data in the field of the branch of knowledge
	of the master's degree in the native language and at least in another International diffusion language.
В9	Skills of preparation, show and defense of a work.
C2	Ability to know and use appropriately the technical terminology of the field of knowledge of the master, in the native language and in
	English, as a language of international diffusion in this field

Learning outcomes			
Learning outcomes	Stud	y progra	amme
	CO	mpeten	ces
- To understand the molecular mechanisms of plant-pathogen interaction	AR4		CC2
	AR8		
- To know the different mechanisms of the plant response to pathogens.	AR4		CC2
	AR5		
	AR6		
	AR8		
To understand and be able to use the experimental approaches to research in this field.	AR4	BR3	CC2
	AR5	BR5	
- Ability for critically reviewing scientific papers related to this subject.	AR5	BR3	CC2
	AR6	BR5	
		BR9	

Contents

Topic	Sub-topic
Molecular mechanisms in plant-pathogen interaction.	Recognition of the plant by the pathogen and mechanism to attack the plant.
	Recognition of the pathogen by the plant amnd mechanisms of defense. Pathogen
	Associated Molecular Patterns (PAMPs). Oxidative burst. Salicylates, jasmonates and
	ethylene. Hypersensitive response. Gene-for-gene resistance. Nonhost resistance.
	Induced resistance to pathogens: SAR and ISR. Npr1. Priming. Transcription factors
	involved in resistance.
Other interactions related to plant-pathogen interaction.	Recognition of herbivores, signalling and defense mechanisms. Rhizobium-plant
	interaction. Mycorrhizae.

	Methodologies		
Methodologies	Description		
Guest lecture /	In this blended mode, lectures are replaced by videos, texts and other materials so that students can learn the fundamental		
keynote speech	contents of the subject. There will be virtual forums for dialogue and debate between students and lecturers on the issues		
	addressed.		
Document analysis	Reading and analysis of a primary research paper related to the subject, accompanied by its presentation in Teams by the		
	student and further discussion.		
Laboratory practice	Laboratory practices The blended students will do virtual laboratory and field practical activities designed ad hoc by the		
	lecturers.		
	Optionally, each blended student can request, individually, the possibility of attending the practices on the dates established		
	for face-to-face students.		
Objective test	Exam on the contents of the lectures carried out through the Virtual Campus		

Personalized attention		
Methodologies	Description	
Guest lecture /	The students can ask any question about the subject, and particularly about the work to do, using Teams and email.	
keynote speech

Laboratory practice		

Assessment			
Methodologies	Competencies	Description	Qualification
Guest lecture / keynote speech	A4 A5 A6 A8	Participation in the forums about contents of the virtual lecture units.	10
Document analysis	A8 B3 B9 C2	Aspects to be assessed: Proper understanding of the paper by the student, the presentation in Teaams and the participation in the discussion (including the critical review of the paper).	40
Laboratory practice	A5 B3 B5 C2	Participation in the virtual activities, as well as a written report.	20
Objective test	A5 A6 B3 B5 C2	Exam about the virtual lecture units.	30

Assessment comments

The students who pass the subject in the first opportunity, will be prefentially considered to get the highest qualification (with honors).

Any academic dishonesty (plagiarism, cheating in exams, etc.) will be penalised in accordance with the provisions of the UDC regulations.
