Teaching Guide				
Identifying Data			2021/22	
Subject (*)	Instrumental Analytical Chemistry 1		Code	610G01013
Study programme	Grao en Química			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	1st four-month period	Third	Obligatory	6
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Química			
Coordinador	Moreda Piñeiro, Jorge	E-mail	jorge.moreda@udc.es	
Lecturers	Moreda Piñeiro, Jorge	E-mail	jorge.moreda@udc.es	
	Soto Ferreiro, Rosa Maria		rosa.soto.ferreiro@udc.es	
Web				
General description	This course is intended for students to understand the fundamentals and the possibilities of the most common spectroscopic techniques. Focus will be on the physical and chemical bases of the main techniques, equipment configuration, experimental conditions and main applications.			
Contingency plan	<p>1. Modifications to the contents</p> <p>Contents changes are not considered</p> <p>2. Methodologies</p> <p>All methodologies will be face-to-face and the programming established in the coordination calendar of the Center will be maintained. In cases where the capacity of the assigned classroom is exceeded, a second classroom will be enabled for the teaching of the class through TEAMS for students who are not in the classroom with the teacher.</p> <p>In the case of non-face-to-face survival caused by COVID-19, all teaching methodologies are adapted to the non-face-to-face modality through Moodle and Teams and the programming established in the coordination calendar of the Center is maintained.</p> <p>The guest lectures and seminars will be taught through the Moodle Platform synchronously at the time specified in the course schedule.</p> <p>The laboratory practices will be replaced by virtual practices and supervised project that will be delivered by the student at the end of the semester.</p> <p>The multiple choice questions and the seminar solving test will be carried out through the Moodle Platform (on-line test).</p> <p>3. Mechanisms for personalized attention to students</p> <p>All teaching methodologies will be face-to-face</p> <p>In the case of non-face-to-face survival caused by COVID-19 disease,the personalized follow-up will be done through email, the Moodle platform and the TEAMS tool, at the request of the students and, as far as possible, at the time established for the tutorials. For students with part-time dedication or specific learning modalities or diversity support, personalized attention will be provided within the flexibility allowed by coordination schedules and material and human resources.</p> <p>4. Modifications in the evaluation</p> <p>Contents changes are not considered</p> <p>*Evaluation observations:</p> <p>Remarks included in the guide are maintained.</p> <p>5. Modifications to the bibliography or webgraphy</p> <p>Bibliography support changes are not considered. All the necessary materials will be available in Moodle or through access to the electronic resources available in the Library of the Center.</p>			

Study programme competences	
Code	Study programme competences
A7	Knowledge and application of analytical methods
A15	Ability to recognise and analyse new problems and develop solution strategies
A19	Ability to follow standard procedures and handle scientific equipment
A20	Ability to interpret data resulting from laboratory observation and measurement
A21	Understanding of qualitative and quantitative aspects of chemical problems
A23	Critical standards of excellence in experimental technique and analysis
B2	Effective problem solving
B3	Application of logical, critical, creative thinking
B4	Working independently on own initiative
B5	Teamwork and collaboration
C6	Ability to assess critically the knowledge, technology and information available for problem solving

Learning outcomes			
Learning outcomes		Study programme competences	
Know the fundamentals and characteristics of the most common spectroscopic techniques		A7	B4
Ability to select the most appropriate instrumental technique in solving a particular analytical problem		A7 A15	B4 C6
Skill in the use of different instruments and adjusting the instrumental variables		A19 A21 A23	B4 B5
Ability to get the most reliable information from experimental data. Making calculations.		A20 A21	B2 B3 B4 C6

Contents	
Topic	Sub-topic
1. Principles of instrumental analysis	Resolution of analytical problems. Figures of merit of the instrumental techniques. Calibration. Characteristics and classification of the instrumental techniques. Basic components of the instruments. Signals and noise.
2. UV-VIS spectroscopy	Fundamentals. Instrumentation. Applications. Derivative spectroscopy.
3. IR spectroscopy	IR absorption spectroscopy: fundamentals, instrumentation, practical aspects and applications. IR reflectance spectroscopy.
4. Molecular luminescence spectroscopy	Fundamentals. Variables affecting fluorescence. Relation between concentration and fluorescence. Emission and excitation spectra. Applications. Phosphorescence.
5. Mass spectrometry	Fundamentals. Instrumentation. Applications.

6. Atomic absorption spectrometry	Fundamentals. Flame atomization, electrothermal atomization, vapour generation: Instrumentation. Applications.
7. Atomic emission spectrometry	Fundamentals. Plasma sources. Instrumentation. Applications. ICP-MS.
8. Atomic X Ray spectrometry	Fundamentals. Fluorescence, absorption and diffraction spectrometry. Analytical and operational considerations. Instrumentation. Sample preparation. Applications.
Experimental work	<p>Experiment 1.- Evaluation of the presence of interferents and determination of binary mixtures by UV-VIS spectroscopy.</p> <p>Experiment 2.- Identification of plastics by FT-IR spectroscopy.</p> <p>Experiment 3.- Determination of PAH by molecular fluorescence spectroscopy.</p> <p>Experiment 4.- Determination of Zn in water by flame atomic absorption spectrometry (FAAS). Study of interferences in the determination of Zn and Ca.</p> <p>Experiment 5.- Determination of K in marine water by flame atomic emission spectrometry (FAES).</p> <p>Experiment 6.- Study of the experimental conditions in electrothermal atomic absorption spectrometry: optimization of the atomization program and use of modifiers.</p>

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A7 A15 A21	20	60	80
Seminar	A15 A20 A21 B2 B3 B4	8	24	32
Laboratory practice	A7 A15 A19 A20 A21 A23 B5	20	0	20
Multiple-choice questions	A7 A15 A20 A21 C6	4	0	4
Workshop	A7 B3 B4	0	12	12
Personalized attention		2	0	2

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Learning involve incorporating key concepts on each spectrochemical technique. This 20 Guest lectures will be held on the most important content of the program. For full use of these, it is recommended that students have previously read on their own fundamental aspects of these topics in the recommended texts
Seminar	These seminars will constitute 7 sessions in which the teacher and students solve numerical problems. The work of students in these seminars is assessed by solving problems on the day of the objective test.
Laboratory practice	Learning the contents of the course involves 6 sessions of labs in which students will practice the theoretical concepts acquired, manipulate analytical tools and solve problems. The teacher will advise these activities.
Multiple-choice questions	Farase un examen final para evaluar o grado de aprendizaxe o longo do cuatrimestre. A data do mesmo está indicada no calendario de exames do grao
Workshop	The contents explained will be consolidated performing several self-assessment questionnaires.

Personalized attention	
Methodologies	Description

Laboratory practice Seminar	<p>The labs and seminars for the numerical solution of problems are conducted under the supervision of the teacher at school hours. Tutorial sessions (if necessary) will be made in which doubts will be resolved and the work performed by the student will be supervised, etc.</p> <p>For students with part-time dedication seminars for the numerical solution of problems will be performed by students outside the academic timetable established; Professor resolve any questions and review the work done tutorials established with the student. It shall be mandatory laboratory practices in the academic schedule.</p>
--------------------------------	---

Assessment			
Methodologies	Competencies	Description	Qualification
Multiple-choice questions	A7 A15 A20 A21 C6	The students' work will be evaluated through a Multiple choice question Test which enclosed all theoretical and practical contents.	50
Laboratory practice	A7 A15 A19 A20 A21 A23 B5	The Labs will be mandatory throughout the semester. The students will answered several cuestions during at the end of lab sesions.	20
Seminar	A15 A20 A21 B2 B3 B4	The seminars will be avaluated by the individual resolution of numerical problems on the day of the multiple choice question test.	20
Workshop	A7 B3 B4	The questionnaires will completed by the students at the end of each topic.	10

Assessment comments
<p>To pass the course three basic requirements are required:</p> <ul style="list-style-type: none">-mandatory attendance at labs and regular attendance at other activities (seminars for the numerical solution of problems),-implementation of all activities (workshops) and-achieve a minimum final score of 5 points in each of the activities. <p>If minimum valuea are not achieved in any of activities, and the average is greater than or equal to 5, the student will not pass the course and will appear a qualification of 4.5. The student will obtain the qualification of ?No presentado? when they do not perform labs and the multiple-choice questions. The qualifications for the labs and seminars will remain in the July second chance. While the qualification of the multiple-choice questions made in July will replace that obtained in February. The students evaluated on the second opportunity will obtain ?Matrícula de honor? only if the maximum number of those for the corresponding course has not been fully covered at the first opportunity.</p> <p>An objective test of the first half of the teoríc contents of the programme will be conducte before the official data (First Oportunity). Students who surpass the these contents (minimum final score of 5 points) will not have to re-examine in the official data of the First Opportunity in January.</p> <p>For students with part-time dedication, labs practices will be mandatory and will be provided within the flexibility to allow coordinating schedules and material and human resources. Students with part-time dedication will be evaluated by the qualifications obtained in the mixed test (65%), labs practices (20%) and workshops (15%). This will apply to both opportunities.</p> <p>For those students who apply for the advance assessment in December, the considerations indicated in the teaching guide for the previous year will be applied.</p>

Recommendations

Subjects that it is recommended to have taken before

Analytical Chemistry 1/610G01011

Analytical Chemistry 2/610G01012

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Other comments

Recommended:- Be able to redact, synthesize and present a work neatly. - Knowledge of basic computing tools (use of internet, word processing, presentations, etc.). - Be able to handle textbooks. - Basic knowledge of English. - Study and review the contents taught weekly using bibliographic material to understand and deepen the information obtained in class. - Clarify any doubts with the teacher. - Prepare the seminars thoroughly. - Participate actively in class.
