Web	(En construcción)					
General description	Historically, the study of Chemistry has	been divided in large are	as of knowledge which ir	ncluded Inorganic Chemistry		
	among them. This discipline includes ex	perimental investigation	and theoretical interpreta	tion of the properties and		
	reactivity of all elements of the periodic	table as well as the com	oounds derived from ther	n. Therefore, two of the most		
	characteristic features of Inorganic Che	mistry are in first place, t	ne great diversity of conte	ents and second, its		
	interdisciplinary nature. The significance	e of Inorganic Chemistry	goes beyond of purely ac	ademic boundaries. Thus, in o		
	daily lives, we can find a great variety of	f inorganic products whic	h are commonly used. It	can be remarked the significan		
	implications in industrial and technologie	cal processes which con	ribute decisively to the decis	evelopment of society. In the		
	curriculum of the Degree in Chemistry of	of the UDC and according	to academic organizatio	n criteria, Inorganic Chemistry		
	curriculum of the Degree in Chemistry of the UDC and according to academic organization criteria, Inorganic Chemistry is scheduled in the second year of the Degree and planned in two theoretical-practical courses: Inorganic Chemistry 1 and					
		gree and planned in two	theoretical-practical cours	ses: Inorganic Chemistry 1 and		
	Inorganic Chemistry 2. Inorganic Chemi					
		istry 2 focuses on the sys	stematic study and synthe	esis of the elements of groups 1

 A23 Critical standards of excellence in experimental technique and analysis A26 Ability to follow standard laboratory procedures in relation to analysis and synthesis of organic and inorganic systems B1 Learning to learn B2 Effective problem solving B3 Application of logical, critical, creative thinking 	A21	Understanding of qualitative and quantitative aspects of chemical problems
A26 Ability to follow standard laboratory procedures in relation to analysis and synthesis of organic and inorganic systems B1 Learning to learn B2 Effective problem solving B3 Application of logical, critical, creative thinking	A22	Ability to plan, design and develop projects and experiments
B1 Learning to learn B2 Effective problem solving B3 Application of logical, critical, creative thinking	A23	Critical standards of excellence in experimental technique and analysis
B2 Effective problem solving B3 Application of logical, critical, creative thinking	A26	Ability to follow standard laboratory procedures in relation to analysis and synthesis of organic and inorganic systems
B3 Application of logical, critical, creative thinking	B1	Learning to learn
	B2	Effective problem solving
B4 Working independently on own initiative	B3	Application of logical, critical, creative thinking
	B4	Working independently on own initiative
C1 Ability to express oneself accurately in the official languages of Galicia (oral and in written)	C1	Ability to express oneself accurately in the official languages of Galicia (oral and in written)

Learning outcomes			
Learning outcomes	Study	Study programme	
	con	npetenc	es/
		results	
The student must know and rationalize the chemical behavior of the elements and their main compounds, as well as their	A1	B1	C1
individual properties and possibilities to be combined, using suitable models and theories and establishing relationships with	A2	B3	
their position in the periodic table.	A3	B4	
	A4		
	A5		
	A6		
	A12		
	A14		
	A16		
	A21		
The student must know the equipment and techniques of common use in a laboratory of Inorganic Chemistry, and develop the	A17	B1	C1
skills required to use them.	A18	B2	
	A20	B3	
	A21	B4	
	A22		
	A23		
	A26		
The student must be able to relate critically the theoretical knowledge with the experimental facts observed in the laboratory.	A14	B1	C1
	A20	B3	
		B4	

The student must know the bibliographic resources used in Inorganic Chemistry.	A16	B1	C1
		B3	
		B4	

	Contents
Торіс	Sub-topic
Lesson 1. Metals: an overview.	1.1. General Characteristics of metals.
	1.2. Structure and bonding.
	1.3. Physical and chemical properties. Chemistry in aqueous solution. Aquated
	cations: formation and acidic properties. Pourbaix diagrams.
	1.4. Preparation. Ellingham diagrams.
Lesson 2. Coordination Chemistry.	2.1. General considerations: Definition and terminology.
	2.2. Types of ligands.
	2.3. Bonding in complexes.
	2.4. Coordination numbers and geometries.
	2.5. Isomerism in coordination chemistry.
	2.6. Ligand Topology.
Lesson 3. The Group 14 elements (C, Si, Ge, Sn, Pb).	3.1. Electronic structures of atoms and chemical behaviour.
	3.2. The elements: structure and bonding, physical and chemical properties.
	Chemistry in aqueous solution.
	3.3. Occurrence, extraction and uses.
	3.4. Main compounds.
Lesson 4. The Group 13 elements (B, Al, Ga, In, Tl).	4.1. Electronic structures of atoms and chemical behaviour.
	4.2. The elements: structure and bonding, physical and chemical properties.
	Chemistry in aqueous solution.
	4.3. Occurrence, extraction and uses.
	4.4. Main compounds.
Lesson 5. The Groups 1, 2 and 3.	5.1. Electronic structures of atoms and chemical behaviour. Diagonal relationships
	between Li and Mg, and between Be and Al.
	5.2. The elements: structure and bonding, physical and chemical properties.
	Chemistry in aqueous solution.
	5.3. Occurrence, extraction and uses.
	5.4. Main compounds.
Lesson 6. d-Block metal chemistry: the first row metals.	6.1. The d-Block metals: General characteristics and classification.
	6.2. Electronic structures of atoms and chemical behaviour. The most common
	oxidation states.
	6.3. The elements: structure and bonding, physical and chemical properties.
	Chemistry in aqueous solution.
	6.4. Occurrence, extraction and uses.
	6.5. Main compounds.
Lesson 7. d-Block metal chemistry: the second and the third	7.1. Electronic structures of atoms and chemical behaviour. The most common
row metals.	oxidation states.
	7.2. The elements: structure and bonding, physical and chemical properties.
	Chemistry in aqueous solution.
	7.3. Occurrence, extraction and uses.
	7.4. Main compounds.
Lesson 8. The f-block metals.	8.1. Lanthanides
	8.2. Actinides
	8.3 Postactinides
Lesson 9. Experimental Inorganic Chemistry.	Synthesis of inorganic elements and compounds.

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Introductory activities	Presentation of the subject and its contents, the methodology that is used throughout the course and the criteria that will be
	used for the assessment.
Guest lecture /	Classroom activity designed for relatively large groups of students (a maximum of sixty) in which the main contents of the
keynote speech	course are presented. The lectures will require the participation of the students asking questions about the lecture and
	answering those questions raised by the instructor. It is advised that the students read in advance the literature associated to
	the topic that will be covered by the lecture.
Problem solving	On site activities for small to very small groups in which the students must participate actively. A list of problems and exercises
	will be delivered to the students before the problem-solving sessions. Before attending class, and in order to participate and be
	evaluated in it, the student must submit the exercises through the online platform available for the course. The problems are
	discussed and solved by the students following the guidance of the instructor.
Supervised projects	Before starting the laboratory practice the student will perform an initial survey of theoretical and preparative aspects related to
	the experiment that will be carried out in the laboratory. For this purpose, students will make use of the knowledge of the
	contents of the course and the sources of information recommended by the instructor. This preliminary work and the
	conclusions drawn from the study will be presented to the instructor in an interview before the laboratory practice starts. The
	instructor will assess whether the student has gained enough knowledge to start the experiments in the laboratory with safety
	and with ability to link the experiments with the concepts delivered during the course.

Laboratory practice	It will focus on the synthesis and isolation of inorganic substances. The experiments must be carried out with a careful
	observation of the safety rules, as well as with the efficiency and rigor characteristic of the scientific method. The students will
	complete a laboratory notebook that will contain three different parts: An overview of the preliminary work developed to
	prepare the experiment (supervised projects), a detailed description of the execution of the experiment (laboratory diary), and
	a comment on the results obtained and the conclusions that can be drawn from the experiments.
Objective test	The students will answer intermediate tests with short questions combining multiple-choice answer questions, organization,
	short-answer, discrimination and/or association questions, in some of the sessions scheduled for lectures or problem solving
	activities. This will help both students and instructors to detect deficiencies related to the contents of the course presented up
	to that point.
Multiple-choice	A test will be carried out in the lectures at the end of each lesson, to evaluate the learning of the contents. This test will be
questions	made using platforms such as Moodle, Office 365 package tools and / or applications available on the Internet. For this
	purpose, questions will be asked as a direct question or an incomplete statement, and several options or response alternatives
	providing possible solutions, of which only one of them is valid, thus seeing the degree of assimilation of the contents of the
	course by the student.
Document analysis	This methodology will help the student to work on relevant content for the subject matter, with activities specifically designed
	on the platforms for their analysis through the use of audiovisual and / or bibliographic documents (fragments of documentary
	reports or films, current news, photographs, articles, etc.) available to the student through the online platforms.
Mixed	Written test that will contain different types of exercises: Essay-type questions that require medium or long answers that
objective/subjective	address a rather general topic, short-answer questions to address more specific issues, Problem-solving questions, which
test	require calculations for their solution or the logical application of the competences that the student has acquired during the
	course, and Multiple-choice questions.

	Personalized attention
Methodologies	Description
Guest lecture /	The teaching-learning process is supported by individual attention to the student, and will take place at the most convenient
keynote speech	time for the student and the teacher.
Problem solving	
Laboratory practice	Those students having a part-time dedication to the course, and thus waiver of assistance to the on-site academic activities
Mixed	according to the regulations of UDC, will be supported with specific individual attention in different forms:
objective/subjective	- Tutoring support upon request of the student.
test	- The instructor will propose (upon student request) specific tasks to the student such as problem sheets related to the
Supervised projects	contents of the course. The student will solve the problems individually and then request a tutoring session to have convenie
Objective test	feedback from the instructor.
Multiple-choice	- Tutoring support for the preparation of the experiments that the student will carry out in the laboratory and the preparation of
questions	the personal interview (see methodologies above). Again, these tutoring sessions will take place upon student request and
Document analysis	scheduled at the convenience of the student.

	Assessment			
Methodologies	Competencies /	Description	Qualification	
	Results			
Problem solving	A1 A2 A3 A4 A5 A6	During the problem-solving classes, the professor assesses the solution of the	10	
	A12 A14 A21 B2 B4	proposed problems as well as their active participation in the discussions with the		
	C1	other students.		

Laboratory practice	A14 A17 A18 A20	Work in the laboratory will be assess according to:	20
	A21 A22 A23 A26 B1	- Organization and security	
	B2 B3 B4 C1	- Knowledge of the material and technical procedures	
		- Manual skill and, especially, the ability to understand the processes observed from	
		the previous preparation.	
		The three parts of the laboratory notebook will also be graded:	
		1-Summary of the theoretical preparation (carried out during the supervised work).	
		2-Detailed description of laboratory work (laboratory diary).	
		3- Results and conclusions drawn from the experiment.	
Mixed	A1 A2 A3 A4 A5 A6	Students will take the mixed test in the hours designed by the Faculty. It will consist of	40
objective/subjective	A12 A14 A21 B2 B3	a number of questions and problems related to the subject's contents, according to the	
test	C1	Methodology section.	
Supervised projects	A14 A16 A21 B1 B2	During the interview associated to the supervised work, the teacher will assess	10
	B3 B4 C1	whether the student has gained enough knowledge of the theoretical and preparative	
		aspects related to the experiment that will be carried out in the laboratory	
		The student will not be able to begin the work in the laboratory until he/she performs	
		adequately this previous preparation.	
Objective test	A1 A2 A3 A4 A5 A6	Periodically, the students will take a series of short-term or short-answer tests, in	10
	A12 A14 A21 B2 B3	accordance with the methodologies section.	
	C1		
Multiple-choice	A1 A2 A3 A4 A5 A6	Periodically, short multiple-choice tests will be carried out through online platforms,	5
questions	A12 A14 A21 B2 B3	according to what is indicated in the Methodology section.	
	C1		
Document analysis	A1 A2 A3 A4 A5 A6	Periodically, according to what is indicated in the methodology section, there will be	5
	A12 A14 A21 B2 B3	activities in which, based on audiovisual and / or bibliographic documents, the student	
	C1	must answer questions related to the content through the online platforms available for	
		the course.	

Assessment comments

Passing the course requires obtaining a minimum of 50 points. It is also mandatory to achieve at the same time a minimum of the 50 % of the grade of the mixed test and also a minimum of 40 % of the sum of the marks from Tutorized works + Laboratory practice. In the case of a student who do not get the minimum mark in any of them, even if the sum of the global is equal or higher than 50, the course will be considered failed (4.5 over 10 points). The evaluation cannot be positive if not all laboratory classes have been attended. The student will not be graded when participating in activities that add up to less than 25% of the final grade of the continuous assessment. Regarding the second chance in July: The grade of the mixed test of the second oportunity will replace that obtained in the mixed test of the first opportunity, being again necessary to obtain a minimum of 5 (out of 10) of the total score of the mixed test in order to pass the subject, which will mean, as in "the first opportunity", 40% of the grade. Those students who failed to pass the laboratory practice will be able to carry out a supervised project regarding a new laboratory practice and the corrresponding summary of the theoretical preparation. The qualification of the rest of evaluable activities during the course will be kept in the second opportunity in July.

Students who are assessed in the "second chance" will only be eligible for honors if the maximum number of these for the course, in accordance with academic regulations, was not fully covered in the "first chance".

Those students who take advantage of the "recognition of part-time dedication and academic exemption from attendance" in accordance with UDC regulations, will only be required to attend supervised work and practical laboratory classes. The final grade for these students will consist of two parts: the grade obtained in the supervised work and laboratory practices, which will contribute 30% to the final grade and the mixed test, which will count for the remaining 70%. These qualification percentages will apply to both opportunities.

In the case of exceptional, objectifiable and duly justified circumstances, the Responsible Professor may totally or partially exempt any member of the student body from participating in the continuous assessment process. Students who find themselves in this circumstance must pass a specific exam that leaves no doubt about the achievement of the competencies of the subject.
