	Study programme competences			
Code	Study programme competences			
A1	Ability to use chemistry terminology, nomenclature, conventions and units			
A3	A3 Knowledge of characteristics of the different states of matter and theories used to describe them			

A6	Knowledge of chemical elements and their compounds, synthesis, structure, properties and reactivity
A12	Ability to relate macroscopic properties of matter to its microscopic structure
A17	Ability to work safely in a chemistry laboratory (handling of materials, disposal of waste)
A20	Ability to interpret data resulting from laboratory observation and measurement
A23	Critical standards of excellence in experimental technique and analysis
A24	Ability to explain chemical processes and phenomena clearly and simply
A25	Ability to recognise and analyse link between chemistry and other disciplines, and presence of chemical processes in everyday life
B2	Effective problem solving
B3	Application of logical, critical, creative thinking
B4	Working independently on own initiative
C4	Self-development as an open, educated, critical, engaged, democratic, socially responsible citizen, equipped to analyse reality, diagnose
	problems, and formulate and implement informed solutions for the common good
C6	Ability to assess critically the knowledge, technology and information available for problem solving

Learning outcomes					
Learning outcomes			Study programme		
			ces		
To achieve a general vision of Materials Science and its interdisciplinary character. To achieve basic notions about different	A25	B3	C4		
criteria for the classification of materials.			C6		
To know the different families of materials (metals, ceramics, polymers, composites) and the main methods of synthesis and	A1				
processing	A3				
To know their most outstanding properties and to be able to relate them to their composition, structure and microstructure.	A6				
	A12				
	A24				
To know the basics and applications of materials of interest for the electrical and electronic industries, and also of magnetic	A12				
and optical materials.	A24				
	A25				
To develop criteria for the selection of materials based on their applications.	A6	B2	C4		
	A25	B3	C6		
		B4			
To get acquainted with techniques and working methodologies of common use in Materials Labs.	A17	B2			
	A20	B4			
	A23				
To be able to analyze and interpret data containing scientific and technical information about materials.	A1	B2	C4		
	A20	B3	C6		
	A23	B4			

Contents			
Topic Sub-topic			
I. Introductory Section	? Introduction to Materials Science		
	? Criteria for classification of Materials		
	? Criteria for selection of Materials		
	? Structure, microstructure and phase diagrams		
II. Families of Materials	? Metals and alloys (steels, cast irons and non-ferrous alloys)		
	? Ceramics (clay products, refractories, abrasives, cements, glasses, advanced		
	ceramics)		
	? Polymers (thermoplastics, termosetting polymers, elastomers)		
	? Composites		
	?Synthesis and processing tecniques		

III: Properties of Materials	? Mechanical properties
	? Magnetic properties:
	- dia- and para-magnetism
	- ferro-, ferri-, and antiferro-magnetism
	- main applications (motors, magnetic recording)
	? Electrical properties:
	- electronic condutors
	- semi-condutors (transistors, photovoltaic cells, LEDs)
	- supercondutors
	- insulators (dielectrics, ferroelectrics, piezoelectrics, pyroelectrics, devices)
	? Introduction to optical properties and their applications
IV: New trends in Materials Science and examples of selection	? Biomaterials, nanomaterials, etc.
of materials	? Examples of selection of materials
V: Materials Laboratoy	? Synnthesis and processing
	? Characterization and study of materials properties

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Guest lecture /	In these lectures the teacher will present the contents of the different themes, enphasizing their main aspects and paying
keynote speech	special attention to fundamental and/or difficult concepts.
Problem solving	These classes will be devoted to the resolution of a series of problems and questions that will be given in advance to the
	student so that he/she can work on them before the corresponding session.
Seminar	Work in small groups devoted to the discussion of a topic, a case study etc. prepared in advanced by the students.
Events academic /	Complementary activities consisting in a visit to centers/installations working in aspects related to this subject, attendance to
information	scientific talks organized by the Faculty and other organisms during this semester, etc.
	These activities will be organized and announced during the course depending on the number of students, the invited
	speakers that will come tro the Faculty during this period, etc.
Supervised projects	Before starting the work in the Lab the students will have to carry out a study about aspects of interest for the topic of his/her
	experiment. This task will be guided and supervised by the teacher with whom the student will have at least one personal
	interview.

Laboratory practice	Supervised work that will be carried out in the Lab and that will be centered in the synthesis and processing of different types
	of materials, their characterization and study of their properties.
Mixed	Final exam that will take place on the official dates approved by the "Junta de Facultad". It will evaluate the level of
objective/subjective	knowledge and competences acquired by the student ands his/her capability to integrate them as well as proof a global vision
test	on the subject.

	Personalized attention
Methodologies	Description
Guest lecture /	Personalized attention will be given mainly through activities carried out in small groups, and also in individualized tutorials
keynote speech	fundamentally associated with the methodologies "problem solving", "supervised work" and "laboratory practices".
Seminar	
Events academic /	For students with "academic dispensation":
information	- the tutorials associated with "laboratory practices" will be the same as for the rest of the students;
Laboratory practice	- the rest of the tutorials may be replaced by personalized tutorials that will not be evaluated. These students would pass a
Problem solving	particular examination, in addition to the compulsory mixed test, which would leave no doubt about their level of knowledge
Supervised projects	competences, skills and abilities, and which would score 20% of the overall grade. In order to benefit from this system, the
Mixed	student must notify the responsible teacher at the beginning of the course.
objective/subjective	
test	Obviously, and apart from the tutorials proposed by the teacher, any student can carry out tutorials at their own request
	(face-to-face or virtual) within the 6 hours of weekly tutorial that the teacher makes available to the student. Whenever
	possible, the teacher will facilitate these tutorials outside these hours and/or at a distance.

		Assessment	
Methodologies	Competencies	Description	Qualification
Guest lecture /	A1 A3 A6 A12 A16	Aspects that will be taken into account: extent of previous preparation, of follow-up	0
keynote speech	A25 B3 C4	and of active participation	
		"Guest lecture", "Problem solving", "seminars" and "events" will be assessed together.	
Seminar A1 A3 A6 A12 I	A1 A3 A6 A12 B2 B3	Aspects that will be taken into account: the work done by the students, their answers, their level of knowledge and their active participation in debates with the other students .	0
		"Guest lecture", "Problem solving", "seminars" and "events" will be assessed together.	
Events academic / information	extracted from these	Aspects that will be taken into account: the conclusions that the students have extracted from these activities and that they should also refect in a written summary that they will have to present afterwards.	0
		"Guest lecture", "Problem solving", "seminars" and "events" will be assessed together.	

Laboratory practice	A1 A16 A17 A20 A23	The work done in the lab will be assessed from the point of view of: organization and	20
	B2 B3 B4	security, knowledge of material and techniques, working skills, and specially degree	
		of understanding and rationalization of observed facts on a scientific basis. The	
		previous preparation of this work and the laboratory notebook will be also taken into	
		account in this evaluation.	
		Although the grade will be based on a continuous evaluation, in particular cases the	
		teacher can also carry out an exam.	
		"Laboratory practice" and "supervised projects" will be	
		assessed together.	
Problem solving	A1 A3 A6 A12 A16	Aspects that will be taken into account: the response of the students and their active	20
	A24 B2 B3	participation in presencial activities. Occasionally, and if requested by the teacher, the	
		students should submit their answers to selected questions, that can also be	
		evaluated.	
		"Guest lecture", "Problem solving", "seminars" and	
		"events" will be assessed together.	
Supervised projects	A1 A3 A6 A12 A16	In the tutoring sessions associated to the activity "Trabajos tutelados" the	0
	A24 A25 B3 B4 C4	teacher will not only guide the students but will also evaluate all aspects related to	
	C6	their preparation for the work in the Lab (in fact the student will not be allowed to start	
		the work in the Lab until he/she have done a goodenough previous preparation), for	
		the case studies , etc.	
		"Laboratory practice" and "supervised projects" will be	
		assessed together.	
Mixed	A1 A3 A6 A12 A24	This final exam, that will take place at the end of the semester, can contain: questions	60
objective/subjective	A25 C4 C6	to develop, short questions, a test and problems that will be similar to those solved	
test		during the Course.	

Assessment comments

The final grade will result from the addition of the following partial contributions:

- Final exam ("Prueba mixta"): up to a maximun of 6 points.

-Activities carried out during the different sessions (seminars, exercises, tutoring sessions, scientif events, etc): up to a maximum of 2 points. -Laboratory sessions: up to a maximum of 2 points.

A minimum of 5 points will be required to pass the Materials Science subject, with the restriction that a minimum of 2.7 (over a maximum of 6) will be necessary in the final exam ("prueba mixta"), as well as a minimum of 0.8 (over a maximum of 2) in the laboratory sessions. If these minima are not achieved the studentt will fail. When a sum of more than 5 points is obtained but the minimum required mark is not reached in one of the activities, the final grade will be "Failed: 4.5 points".

As the assessment of this subject is based on a continuous evaluation model, the progression of the student throughout the semester will be taken into consideration with a maximum of 1 point.

Also, and according to this evaluation model, if the student has participated in activities whose relativeweight is more than a 25% of the total grade, he/she will be assessed.

In this same context, and according to the rules contained in ?Probas de Avaliación e Actas de Cualificación de Grao e Mestrado?, the so-called ?second opportunity of July? is understood as a second opportunity to carry out a final exam ("prueba mixta"). Nevertheless, and in very special cases, the teacher could also include a second part concerning aspects of the Laboratory Sessions. This mark will be considered together with the others obtained during the course corresponding to the other activities (seminars, exercises, scientific events, etc.). The percentages of the different contributions will be the same as those of the former "first opportunity".

The highest grade "Matricula de Honor" will be mainly given to students that pass the subject in the "first opportunity". And it will only be given in the so-called "second opportunity" if there are still any available.

In the case of exceptional, objective and adequately justified circumstances (such as in the case of students with an academic exemption of attendance), the responsible teacher could totally or partially exempt the student from attending the continuous assessment process. In any case, this student will have to undergo a particular examination (in addition to the compulsory mixed test) that will leave no doubt about their level of knowledge, competences, abilities and skills, and that will score 20% of the overall grade.

The teaching-learning process, including assessment, refers to an academic year (this implies that each year starts a new process, including all assessment activities and procedures).
