General description	The students will acquire the basic	knowledge abo	out the physical e	nvironment that they v	will need to develop their career	
	biologists. The physical environment (the internal and external geological processes and the risks associated to them)					
	constitutes the basis of ecosystems and biological communities.					

	Study programme competences
Code	Study programme competences
A6	Catalogar, avaliar e xestionar recursos naturais.
A22	Describir, analizar, avaliar e planificar o medio físico.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
A32	Desenvolverse con seguridade no traballo de campo.
B4	Traballar de forma autónoma con iniciativa.
B5	Traballar en colaboración.
В6	Organizar e planificar o traballo.
B7	Comunicarse de maneira efectiva nunha contorna de traballo.
B8	Sintetizar a información.
В9	Formarse unha opinión propia.
B10	Exercer a crítica científica.
B13	Comportarse con ética e responsabilidade social como cidadán e como profesional.

	Contents		
Topic	Sub-topic		
I. The Formation of the Earth	1. Origin of the Earth		
	2. Earth structure: geochemical model		
	3. Structure of the Earth: dynamic model. Tectonic plates		
	4. Earth Dynamics: Earth's energy		
	5. Origin and evolution of the Hydrosphere. Origin and early evolution of the		
	atmosphere		
II. The rocks of the Earth	6. Magmatic rocks: plutonic and volcanic		
	7. The metamorphic rocks. Types of metamorphism.		
	8. Sedimentary rocks: detrital, chemical and biological.		
III. Historical Geology	9. Stratigraphy and chronostratigraphy. The weather in Geology. Absolute and relative		
	chronology. The geochronological scale. Eons, eras and periods.		
	10. The Archaic Eon.		
	11. The Proterozoic Eon		
	12. The Phanerozoic Eon I: the Paleozoic		
	13. The Phanerozoic Aeon II: the Mesozoic		
	14. The Phanerozoic Eon III: the Cenozoic		
IV. Complementary Themes	15. Human paleontology		
	16. Climate change

	Methodologies
Methodologies	Description
Guest lecture /	Classroom lectures of 50 minutes. In the first hour of class will explain the program of the subject and the teaching method to
keynote speech	be used. The following hours will be dedicated to impart the theoretical contents of the program.
Seminar	Approach and resolution of problems and issues directly and indirectly related to the topics developed in the lectures, under
	the direction of the teacher.
Field trip	
	Study of outcrops of rocky bodies and their forms and interpretation of their genesis and representation. Study of present and
	fossil geological processes and forms of relief
Laboratory practice	Development of the practical agenda with observations on selected material, use of classification criteria. Conceptual
	exercises
Objective test	Exercise consisting of a list of questions about any content of the subject.

	Personalized attention
Methodologies	Description
Seminar	The personalized attention in relation to these methodologies is conceived as moments of face-to-face work for students with
Field trip	the teacher, which implies a compulsory participation for the students. The form and the moment in which they will be
Laboratory practice	developed will be indicated in relation to each activity throughout the course according to the work plan of the subject. The
	solution of practical problems in workshops will serve to verify and guide the contents of the subject and its assimilation by th
	students taking place in small groups. This monitoring can also take place in small groups during laboratory and field
	practices. Personalized attention can be carried out in a non-presential way through e-mail or the virtual campus. This
	non-presential modality will be developed mainly for students with part-time dedication or dispensation of assistance

		Assessment	
Methodologies	Competencies	Description	Qualification
Seminar A22 B4 B5 B6 B7 Bi		Continuous assessment of the ability to obtain, select and understand information. Processing and synthesis of the same.	
Field trip	A6 A22 A32 B9	The observations and attention will be evaluated, as well as the application of the knowledge when interpreting the observations by means of a Field Report.	10
Laboratory practice	A22 A30 A31	The evaluation will come from the assistance and performance of the practices as well as practical tests during the same.	10
Guest lecture / keynote speech	A22 B8 B9	Topics will be presented in the initial 40-45 minutes, and sessions with interactive activities will be finalized to reflect the students about the contents presented. The evaluation will consist of a written test.	70

Assessment comments

Attendance at 80% of all scheduled activities is mandatory. To pass the subject it is necessary to have a 5 out of 10 as a global grade. To calculate the average mark, it is necessary to obtain at least 4.5 out of 10 in each activity. In order to obtain the grade of not presented (NP) it suffices not to take the ordinary final exam.

Students with part-time

dedication or exemption from attendance. These students must compensate

for non-attendance to activities by:-For laboratory activity: a practical work on rock recognition, remotely tutored.-For the field activity: if the attendance (strongly recommended) is not possible, a bibliographical work on the study area, tutored at a distance.-For the seminar activity: the same work as the students face-to-face but tutored at a distance.

	Sources of information
Basic	Recomendaranse textos durante o curso a medida que se necesiten durante a explicación teórica. Os textos
	recomendados son os que traten o tema de Xeoloxía xeral existentes na biblioteca da Facultade de Ciencias.
	Tratarase de proporcionar información específica sobre temas concretos durante a exposición teórica ben nas clases
	maxistrais ben nos grupos reducidos.
