| Department | Física e Ciencias da Terra | | | |
| Coordinador | Grandal D` Anglade, Aurora | E-mail | aurora.grandal@udc.es | |
| Lecturers | Bao Casal, Roberto Blanco Calvo, Luis Alejandro Sanjurjo Sanchez, Jorge Taboada Castro, Maria Teresa | E-mail | roberto.bao@udc.es alejandro.blancoc@udc.es jorge.sanjurjo.sanchez@udc.es teresa.taboada@udc.es | |
| Web | | | | |
| General description | The students will acquire the basic knowledge about the physical environment that they will need to develop their career as biologists. The physical environment (the internal and external geological processes and the risks associated to them) constitutes the basis of ecosystems and biological communities. | | | |
| Contingency plan | 1. Modifications to the contents none 2. Methodologies *Teaching methodologies that are maintained lectures, interactive teaching in small groups, laboratory work *Teaching methodologies that are modified The field trip will be replaced by an activity related to the study area, using videos and images, and the elaboration of a descriptive report. 3. Mechanisms for personalized attention to students Tutorial sessions by email or Teams 4. Modifications in the evaluation none *Evaluation observations: the objective tests on the theoretical contents will have an eminently integrating character, and will be centered on reflections on the theoretical contents 5. Modifications to the bibliography or webgraphy none | | | |

Study programme competences

| Code | Study programme competences |
|------|---|
| A6 | Catalogar, avaliar e xestionar recursos naturais. |
| A22 | Describir, analizar, avaliar e planificar o medio físico. |
| A30 | Manexar adecuadamente instrumentación científica. |
| A31 | Desenvolverse con seguridade nun laboratorio. |
| A32 | Desenvolverse con seguridade no traballo de campo. |
| B4 | Traballar de forma autónoma con iniciativa. |
| B5 | Traballar en colaboración. |
| B6 | Organizar e planificar o traballo. |
| B7 | Comunicarse de maneira efectiva nunha contorna de traballo. |
| B8 | Sintetizar a información. |

| | |
|-----|--|
| B9 | Formarse unha opinión propia. |
| B10 | Exercer a crítica científica. |
| B13 | Comportarse con ética e responsabilidade social como cidadán e como profesional. |

| Learning outcomes | | | |
|--|--|--------------------------------|--|
| Learning outcomes | | Study programme competences | |
| To acquire basic knowledge about internal and external geological processes | | A6 A22 A30 A31 A32 | B4 B5 B6 B7 B8 B9 B10 B13 |
| To know the risks associated with geological processes | | A6 A22 A31 A32 | B4 B5 B6 B7 B8 B9 B10 B13 |
| To know the history of the Earth and within it the evolution of life and its relation to the great changes in the physical environment | | A6 A22 A30 A31 A32 | B4 B5 B6 B7 B8 B9 B10 B13 |
| To know the natural resources | | A6 A22 A30 A31 A32 | B4 B5 B6 B7 B8 B9 B10 B13 |

| Contents | |
|-------------------------------|---|
| Topic | Sub-topic |
| I. The Formation of the Earth | 1. Origin of the Earth 2. Earth structure: geochemical model 3. Structure of the Earth: dynamic model. Tectonic plates 4. Earth Dynamics: Earth's energy 5. Origin and evolution of the Hydrosphere. Origin and early evolution of the atmosphere |

| | |
|----------------------------|---|
| II. The rocks of the Earth | 6. Magmatic rocks: plutonic and volcanic 7. The metamorphic rocks. Types of metamorphism. 8. Sedimentary rocks: detrital, chemical and biological. |
| III. Historical Geology | 9. Stratigraphy and chronostratigraphy. The weather in Geology. Absolute and relative chronology. The geochronological scale. Eons, eras and periods. 10. The Archaic Eon. 11. The Proterozoic Eon 12. The Phanerozoic Eon I: the Paleozoic 13. The Phanerozoic Eon II: the Mesozoic 14. The Phanerozoic Eon III: the Cenozoic |
| IV. Complementary Themes | 15. Human paleontology 16. Climate change |

| Planning | | | | |
|--------------------------------|----------------------------|----------------------|-------------------------------|-------------|
| Methodologies / tests | Competencies | Ordinary class hours | Student's personal work hours | Total hours |
| Guest lecture / keynote speech | A22 B8 B9 | 28 | 70 | 98 |
| Seminar | A22 B4 B5 B6 B7 B8 B10 | 8 | 16 | 24 |
| Field trip | A6 A22 A32 B8 B9 | 5 | 5 | 10 |
| Laboratory practice | A22 A30 A31 | 10 | 5 | 15 |
| Objective test | A22 B3 B4 B6 B8 B9 B10 B13 | 2 | 0 | 2 |
| Personalized attention | | 1 | 0 | 1 |

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| Methodologies | |
|--------------------------------|--|
| Methodologies | Description |
| Guest lecture / keynote speech | Classroom lectures of 50 minutes. In the first hour of class we will explain the program of the subject and the teaching method to be used. The following hours will be dedicated to impart the theoretical contents of the program. |
| Seminar | Approach and resolution of problems and issues directly and indirectly related to the topics developed in the lectures, under the direction of the teacher. |
| Field trip | Study of outcrops of rocky bodies and their forms and interpretation of their genesis and representation. Study of present and fossil geological processes and forms of relief. |
| Laboratory practice | Development of the practical agenda with observations on selected material, use of classification criteria. Conceptual exercises. |
| Objective test | Exercise consisting of a list of questions about any content of the subject. |

| Personalized attention | |
|--|--|
| Methodologies | Description |
| Seminar Field trip Laboratory practice | The personalized attention in relation to these methodologies is conceived as moments of face-to-face work for students with the teacher, which implies a compulsory participation for the students. The form and the moment in which they will be developed will be indicated in relation to each activity throughout the course according to the work plan of the subject. The solution of practical problems in workshops will serve to verify and guide the contents of the subject and its assimilation by the students taking place in small groups. This monitoring can also take place in small groups during laboratory and field practices. Personalized attention can be carried out in a non-presential way through e-mail or the virtual campus. This non-presential modality will be developed mainly for students with part-time dedication or dispensation of assistance |

| Assessment | | | |
|--------------------------------|------------------------|--|---------------|
| Methodologies | Competencies | Description | Qualification |
| Seminar | A22 B4 B5 B6 B7 B8 B10 | Continuous assessment of the ability to obtain, select, understand, process and summarize information. | 10 |
| Field trip | A6 A22 A32 B8 B9 | The observations and attention will be evaluated, as well as the application of the knowledge when interpreting the observations by means of a Field Report. | 10 |
| Laboratory practice | A22 A30 A31 | The evaluation will come from the assistance and performance of the practices as well as practical tests during the lab course. | 10 |
| Guest lecture / keynote speech | A22 B8 B9 | Topics will be presented in the initial 40-45 minutes, and sessions will be finalized with interactive activities that promote the students' reflection about the contents presented. The evaluation will consist of a written test. | 70 |

| Assessment comments |
|---------------------|
|---------------------|

Attendance at 80% of all scheduled activities is mandatory.

To pass the course a minimum of 4.5 points is required in all activities and an average mark of 5 out of 10.

To qualify as a non-applicant (NP), it is sufficient not to take the regular final exam.

Those who do not pass the course by means of continuous assessment activities must carry out the same type of activities autonomously, although under the supervision of the teaching staff.

Both in the final

exam and in the second opportunity

in July, the grades of the activities passed previously will be maintained

and only those not passed will have to be evaluated.

- The evaluation of the theoretical

contents (including geochronological scale) will be carried out by means of a written examination, in person or by telematic means if necessary.

- The test of contents of the work in small group will consist of the resolution of a question similar to those formulated during the course by means of the use of bibliographic databases (Web of Science).

- The evaluation of the laboratory

work will consist of the delivery of

a work on rock recognition

- The evaluation of the field

activity will consist of the delivery of a bibliographic work on the geological aspects of the study area chosen this course.

Part-time or waived

attendance students. These students must compensate for non-attendance to activities through the same system described.

Sources of information

| | |
|----------------------|--|
| Basic | Recomendaranse textos durante o curso a medida que se necesiten durante a explicación teórica. Os textos recomendados son os que traten o tema de Xeoloxía xeral existentes na biblioteca da Facultade de Ciencias. Tratarase de proporcionar información específica sobre temas concretos durante a exposición teórica ben nas clases maxistras ben nos grupos reducidos.os textos principais son: ?Skinner B. & Porter S. The Dynamic Earth. An introduction to physical geology. X-440?Hamblin & Christiansen. Earth?s Dymamic Systems. X-447 and X-860?Wicander & Monroe. Historical Geology. X-330 -333?Wicander & Monroe. The changing Earth. X-366 ?Cowen. History of Life. X-132 - 135)?Levin. The Earth through time. X-850 ? 852?Mazen. The story of Earth. The first 4.5 billion years, from stardust to living planet X-37?Prothero. The story of the Earth in 25 rocks : tales of important geological puzzles and the people who solved them X-39 ?Anguita & Moreno. Procesos geológicos internos. X-27?Anguita. Origen e Historia de la Tierra. X-32?Tarbuck & Lutgens. Ciencias de la Tierra : Una Introducción a la Geología Física. X-808 - 810?Mediavilla. La historia de la Tierra. X-792 -793 |

Other comments

It is recommended to send the works telematically and if this is not possible, do not use plastics, choose double-sided printing, use recycled paper and avoid printing drafts.The sustainable use of resources and the prevention of negative impacts on the natural environment should be observed.The importance of ethical principles related to sustainability values in personal and professional behaviour should be taken into account
