Subject (*)	Genetics			610G02019		
Study programme	Grao en Bioloxía				'	
		Descr	iptors			
Cycle	Period	Ye	ar	Туре	Credits	
Graduate	2nd four-month period	Sec	ond	Obligatory	6	
Language	SpanishGalicianEnglish					
Teaching method	Face-to-face					
Prerequisites						
Department	Bioloxía					
Coordinador	Vila Taboada, Marta		E-mail	marta.vila.taboa	da@udc.es	
Lecturers	Gonzalez Tizon, Ana Maria		E-mail	ana.gonzalez.tiz	on@udc.es	
	Martinez Martinez, M. Luisa			m.l.martinez@u	dc.es	
	Valdiglesias García, Vanessa			vanessa.valdigle	esias@udc.es	
	Vila Taboada, Marta			marta.vila.taboa	da@udc.es	
Web						
General description Contingency plan	This subject's conceptual focus emphasizes the fundamental ideas of Genetics: the basics of heritable traits and an introduction to methodologies used in this discipline. By passing Genetics, students will prove to have acquired the theoretical knowledge and analytical skills needed to take the following subjects: Molecular Genetics (3rd year, compulsory), Population and Evolutionary Genetics (3rd year, compulsory), and Cytogenetics (4th year, optional).				rove to have acquired the ar Genetics (3rd year,	
oonlingency plan	 A. In case of another lockdown because of covid19: Contents will be the same. In-person instruction will change to virtual-only. This means that all lectures will be hosted using MS TEAMS. Tutoring sessions and any other communication will take place by means of email, videocalls or chat as implemented in MS TEAMS. 					
	4. All students will be evaluated online. The final exam will make up 40% of the final grade. We will add another activity to be assessed (20% of the final grade) using part of the time initially planned for seminars. To pass the subject, students will have to score at least 50% of the total value of adding the grades obtained in the final exam grade plus the new activity. 5. The recommended reference list will remain the same. If needed, instructors will provide with any reading and/or course resources to the students.					
	B. Should the number of students be larger than the room capacity, the Faculty will assign one or more "mirror lecture rooms" for this subject. The teacher will start a TEAMS videocall, so that students at the mirror rooms can attend the lecture.					

	Study programme competences				
Code	Study programme competences				
A1	Recoñecer distintos niveis de organización nos sistemas vivos.				
A2	Identificar organismos.				
A4	Obter, manexar, conservar e observar especímenes.				
A11	Identificar e analizar material de orixe biolóxica e as súas anomalías.				
A12	Manipular material xenético, realizar análises xenéticas e levar a cabo asesoramento xenético.				
A20	Muestrear, caracterizar e manexar poboacións e comunidades.				
A26	Deseñar experimentos, obter información e interpretar os resultados.				

A29	Impartir coñecementos de Bioloxía.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
B1	Aprender a aprender.
B2	Resolver problemas de forma efectiva.
В3	Aplicar un pensamento crítico, lóxico e creativo.
B4	Traballar de forma autónoma con iniciativa.
B5	Traballar en colaboración.
В6	Organizar e planificar o traballo.
B8	Sintetizar a información.
В9	Formarse unha opinión propia.

Learning outcomes

	A29	B5	
	A30	В6	
	A31	В9	
To learn about changes in the genetic material	A2	B1	
	A11	B2	
	A26	В3	
	A29	B5	
		В9	
To set the basis of quantitative and population genetics	A1	B1	
	A20	B2	
	A26	В3	
	A29	B5	
	A30	B6	
	A31	B8	

Contents			
Topic	Sub-topic		
1. Introduction to Genetics	Definition of Genetics		
	History of Genetics		
	Genetics and other sciences		
	Genetics and society		
2. Mendelian Genetics	Mendel?s experiments: mono and dihibrid crosses		
	Concept of geno and phenotype		
	Terms and symbols		
	Pedigree analysis		

3. Chromosomal Basis of Inheritance and Sex Determination	Genetic implications of mitosis and meiosis
	Chromosomal theory of inheritance
	Sex determination
	Sex-linked inheritance
	Sex-limited and sex-influenced traits
	Gene dosage compensation
4. Extensions of and Deviations from Mendelian Genetic	Modification of dominante relationships
Principles	Multiple alleles
	Lethality
	Penetrance and expressivity
	Pleiotropy
	Gene interaction and epistasis
	Position effect
	Environmental interactions
5. Genetic Mapping in Eukaryotes	Linkage, recombination and mapping of genes on chromosomes
	Interference and coincidence
	Genetic map function: connecting recombination fractions and genetic map distances
6. Genetic Analysis and Mapping in Bacteria and	Bacterial transformation
Bacteriophages	Bacterial conjugation: plasmids and episomes
	Generalized and specialized transduction
	Genetic recombination in bacteriophages. Fine structure of the gene: rll system of
	phage T4
7. Extranuclear Inheritance	Maternal effect
	Maternal inheritance
	General features of mitochondrial and chloroplast genomes
	Heteroplasmy
	Infectious heredity
8. Quantitative Genetics	Quantitative traits
	Genes and environment
	Phenotypic distribution and norms of reaction
	Genetic basis of quantitative traits: Johannsen?s experiment
	Polygenic inheritance: Nilsson-Ehle?s experiment
	Heritability
9. Population Genetics	Mendelian population
,	Genetic variation
	Allele and genotype frequencies
	Random mating and Hardy-Weinberg equilibrium
	Evolutionary forces: mutation, migration, random drift, and selection
10. The Nature of Genetic Material	Discovery of bacterial transformation
To the head of conducting	DNA as source of genetic information: Hershey & DNA as experiment
	RNA as genetic material in viruses
	Structure and properties of nucleic acids
11. DNA Organization in Chromosomes	Genome size: the C-value paradox
2.0 Conganization in Ontoniosomos	Bacterial chromosomes
	Eukaryote chromosomes
	DNA packaging: Nucleosomes and Chromatin
	Centromeres and Telomeres
	Lampbrush and polytene chromosomes
	Karyotype

Reinfort and adaptive inflation Mutant types Sportaneous and induced mutation Detecting mutagens: the Ames test 13. Variations in Chromosome Structure Deletions Duplications Translocations Robertsonian Usions/dissociations 14. Variations in Chromosome Number Euplicity and aneuploidy Monoploidy Polyploidy: Autopolyploidy and Allopolyploidy Aneuploidy: metotic nondisjunction, menosomy, trisomy Somatic aneuploidy: mitotic nondisjunction, sexual mosaics B chromosomes Teaching labs Lab 1, CENETIC ANALYSIS IN CORN (Zea mays): INTERACTION AND EPISTASIS. Description of shape and colour of F2 seeds (kernel) obtained from different crosses Hypothesis testing (chi-square) Inference of genotype and phenotype of generations P and F1 Genetic and Biochemistry basis of the observed phenotypes Lab 2, SETTING UP EXPERIMENTS USING Drosophilia. Raising and handling Drosophilia in the lab Life cycle Analysing fruit files: distinguishing sex, why isolating virgin females, observation of some mutant phenotypes Lab 3, LINKAGE MAPPING IN D. melanogaster. Reciprocal crosses between wild and three-factor mutant (yellow, white y ministure) Analysis of Offspring (F1) Testcrosses, analysis of offspring (F2) and statistical approach to determine the linkage order and map distances between the three loci on Drosophilia chromosomes (calculation of frequencies of recombination, coincidence coefficient and interference) Lab 4, POLYTENE CHROMOSOME OF THE SALIVARY GLANDS OF D. buzzatii. Extraction of larval salivary glands Staining with orcein Identification of polytene chromosomes and the sex of larva Chromosome pulling Lab 5, COMPUTER LAB. Introduction to bioinformatics databases and resources offered through the NCBI Getting familiar with the following databases: PUBMED, BOOKS, TAXONOMY, OMIM.	40 DNA Materian	Dandens and adeative souteties
Spontaneous and induced mutation Detecting mutagens: the Ames test 13. Variations in Chromosome Structure Deletions Duplications Inversions Robertsonian fusions/dissociations 14. Variations in Chromosome Number Euploidy and aneuploidy Monoploidy Polyploidy: Autopolyploidy and Allopolyploidy Aneuploidy: meiotic nondisjunction, monosomy, trisomy Sometic aneuploidy; mitotic nondisjunction, sexual mosaics B chromosomes Teaching labs Lab 1. GENETIC ANALYSIS IN CORN (Zea mays): INTERACTION AND EPISTASIS. Description of shape and colour of F2 seeds (kernet) obtained from different crosses Hypothesis testing (chi-square) Inference of genotype and phenotype of generations P and F1 Genetic and Biochemistry basis of the observed phenotypes Lab 2. SETTING UP EXPERIMENTS USING Drosophila. Raising and handling Drosophila in the lab Life cycle Analysing fruit files: distinguishing sex, why isolating virgin females, observation of some mutant phenotypes Lab 3. LINKAGE MAPPING IN D. melanogaster. Reciprocal crosses between wild and three-factor mutant (yellow, white y miniature) Analysis of Offspring (F1) Testoroses, analysis of offspring (F2) and statistical approach to determine the linkage order and map distances between the three loci on Drosophila chromosomes (calculation of frequencies of recombination, coincidence coefficient and interference) Lab 4. POLYTENE CHROMOSOME OF THE SALIVARY GLANDS OF D. buzzatii. Extraction of larval salivary glands Staining with orcein Identification of polytene chromosomes and the sex of larva Chromosome puffing Lab 5. COMPUTER LAB. Introduction to bioinformatics databases and resources offered through the NCBI Getting familiar with the following databases: PUBMED, BOOKS, TAXONOMY,	12. DNA Mutation	Random and adaptive mutation
Detecting mutagens: the Ames test Deletions Deletions Unplications Inversions Translocations Robertsonian fusions/dissociations 14. Variations in Chromosome Number Euploidy and aneuploidy Monoploidy Polyploidy: Autopolyploidy and Allopolyploidy Aneuploidy: meiotic nondisjunction, monosomy, trisomy Somatic aneuploidy; mitotic nondisjunction, sexual mosaics B chromosomes Teaching labs Lab 1, GENETIC ANALYSIS IN CORN (Zea mays): INTERACTION AND EPISTASIS. Description of shape and colour of F2 seeds (kernel) obtained from different crosses Hypothesis testing (chi-square) Inference of genotype and phenotype of generations P and F1 Genetic and Biochemistry basis of the observed phenotypes Lab 2, SETTING UP EXPERIMENTS USING Drosophila. Raising and handling Drosophila in the lab Life cycle Analysing fruit files: distinguishing sex, why isolating virgin females, observation of some mutant phenotypes Lab 3, LINKAGE MAPPING IN D. melanogaster. Reciprocal crosses between wild and three-factor mutant (yellow, white y ministure) Analysis of Offspring (F1) Testcrosses, analysis of offspring (F2) and statistical approach to determine the linkage order and map distances between the three loci on Drosophila chromosomes (calculation of frequencies of recombination, coincidence coefficient and interference) Lab 4, POLYTEN ECHROMOSOME OF THE SALIVARY GLANDS OF D. buzzatii. Extraction of larval asilvary glands Staining with orcein Identification of polytene chromosomes and the sex of larva Chromosome puffing Lab 6, COMPUTER LAB. Introduction to bioinformatics databases and resources offered through the NCBI Getting familiar with the following databases: PUBMED, BOOKS, TAXONOMY,		
13. Variations in Chromosome Structure Deletions Inversions Translocations Robertsonian fusions/dissociations Euploidy and aneuploidy Monoploidy Aneuploidy: Medicin condisjunction, monosomy, trisomy Somatic aneuploidy mitotic nondisjunction, sexual mosaics B chromosomes Lab 1, Genetic AnALYSIS IN CORN (Zea mays): INTERACTION AND EPISTASIS. Description of shape and color of FZ seeds (kernel) obtained from different crosses Hypothesis testing (chi-square) Inference of genotype and phenotype of generations P and F1 Genetic and Biochemistry basis of the observed phenotypes Lab 2. SETTING UP EXPERIMENTS USING Drosophila. Raising and handling Drosophila in the lab Life cycle Analysing fruit flies: distinguishing sex, why isolating virgin females, observation of some mutant phenotypes Lab 3. LINKAGE MAPPING IN D. melanogaster. Reciprocal crosses between wild and three-factor mutant (yellow, white y miniature) Analysis of Offspring (F1) Testcrosses, analysis of offspring (F2) and statistical approach to determine the linkage order and map distances between the three loci on Drosophila chromosomes (calculation of frequencies of recombination, coincidence coefficient and interference) Lab 4. POLYTENE CHROMOSOME OF THE SALIVARY GLANDS OF D. buzzatii. Extraction of larval salivary glands Staining with orcein Identification of polytene chromosomes and the sex of larva Chromosome puffing Lab 5. COMPUTER LAB. Introduction to bioinformatics databases and resources offered through the NCBI Getting familiar with the following databases: PUBMED, BOOKS, TAXONOMY,		
Raising and handling Drosophila in the lab Life cycle Analysing fruit flies: distinguishing sex, why isolating virgin females, observation of some mutant phenotypes Lab 3. LINKAGE MAPPING IN D. melanogaster. Reciprocal crosses between wild and three-factor mutant (yellow, white y miniature) Analysis of Offspring (F1) Testcrosses, analysis of offspring (F2) and statistical approach to determine the linkage order and map distances between the three loci on Drosophila chromosomes (calculation of frequencies of recombination, coincidence coefficient and interference) Lab 4. POLYTENE CHROMOSOME OF THE SALIVARY GLANDS OF D. buzzatii. Extraction of larval salivary glands Staining with orcein Identification of polytene chromosomes and the sex of larva Chromosome puffing Lab 5. COMPUTER LAB. Introduction to bioinformatics databases and resources offered through the NCBI Getting familiar with the following databases: PUBMED, BOOKS, TAXONOMY,		Genetic and Biochemistry basis of the observed phenotypes

		hours	work hours	

	A29 B1 B2 B3			
Guest lecture / keynote speech	A1 A11 A12 A20 A26	24	60	84
	В9			
	B2 B3 B4 B5 B6 B8			
Supervised projects	A1 A12 A26 A29 B1	8	16	24
Mixed objective/subjective test	B1 B2 B3 B8 B9	2.5	0	2.5
	B5 B6			
	A30 A31 B1 B2 B3 B4			
Laboratory practice	A2 A4 A11 A12 A26	15	22.5	37.5

	Methodologies		
Methodologies	Description		
Laboratory practice			
	The teaching labs are designed to allow groups of students to work side by side in order to (i) better comprehend certain		
	issues of the syllabus and (ii) see ?real? science as approachable, accessible and exciting.		
	Each lab relies on a theoretical basis (teacher explanation + reading assignment) and a hands-on activity.		
Mixed	The final exam is usually composed by a multiple choice/true-false set, short-answer questions, and a set of genetic problems.		
objective/subjective			
test			
Supervised projects	Group work: students will be assigned a maximum of four sets of genetic problems, whose written solutions have to be handed		
	in for evaluation by certain deadlines. Additional group activities may be assigned for the sake of a better comprehension of		
	particular issues.		
Guest lecture /	Master class and reading groups: the teacher will explain the main contents of each lesson and will assign texts for further		
keynote speech	reading. Working with small groups will allow the exchange of ideas among students, under direct supervision of the lecturer.		

Personalized attention				
Methodologies	Description			
Supervised projects	All students are welcome to receive regular tuition in both theory and practical issues of the subject. Individual or group			
	appointments may be arranged with the teacher.			

		Assessment	
Methodologies	Competencies	Description	Qualification
Mixed	B1 B2 B3 B8 B9	The final exam (test, short-answer, set of problems) aims at evaluating student's	60
objective/subjective		performance by (i) showing his/her understanding of theoretical concepts and (ii)	
test		developing problem-solving strategies.	
Laboratory practice	A2 A4 A11 A12 A26	Laboratory attendance is mandatory. Pass mark of 50% in the corresponding lab test.	15
	A30 A31 B1 B2 B3 B4		
	B5 B6		
Supervised projects	A1 A12 A26 A29 B1	Group work is not mandatory in order to pass the subject. Grading will reflect the	25
	B2 B3 B4 B5 B6 B8	students' comprehension of the topic, their analytical skills, as well as how well the	
	B9	assignment is written, presented and orthograpy.	

Assessment comments

To pass the subject, students must score at least 50% pass in Laboratory Practice as well as 50% in Mixed objective/subjective test. If the cumulative final score is 5.0 or higher, but the student failed either the Mixed objetive/subjective test and/or the laboratory exam (50% pass mandatory in both of them), the grade report will read 4.5 (fail).

Having said this, students with scores [4.5-4.9] in Laboratory Practice may pass the subject if their score in the Mixed objective/subjective test is 5.0 or higher and the final cumulative result is 5.0 or higher.

Students with scores [4.5-4.9] in the Mixed objective/subjective test may pass the subject if their score in Laboratory Practis is 5.0 or higher adnt he final cumulative result is 5.0 or higher. In this case, even if the final cumulative result is higher than 5.0 the final grading will be 5.0.

Pass marks (5.0 or higher) obtained in Laboratory Practice will be kept for the July examination session and the two opportunities of the next academic year if scored at least 50% pass. For example, someone who pass his/her labs in 1st opportunity of year 2020/21 may keep that mark until the July examination session of year 2021/22. Also, is he/she passed the lab exam in the 2nd opportunity of year 2020/21, that result will also be kept until the July examination session of year 2021/22.

Pass marks (5.0 or higher) obtained in the Mixed objective/subjective test (1st opportunity) will be kept for the July examination session (2nd opportunity) but never for the next academic year.

Official withdraw from the course is only possible if the student attends neither Mixed objective/subjective test (final exam) nor the Laboratory Practice exam.

Part-time students or students who participate in equality and diversity support programs are welcome to participate in this subject. The teachers will adapt the different compulsory activities in order to enable these students to fulfil the aims of the course.

If the university discovers a case of fraud or plagiarism in any exam or assignment, the student will fail the whole subject or just the assignment (respectively) as stated in the academic rules and regulations of our university.

Other comments

Attending class regularly is one strategy to maintain satisfactory academic progress. Relying on Moodle notes is not enough to pass at the higher education level!Asking questions in class if you do not understand the material presented. The more you read, do homework, participate in class, the more familiar you will become with content, which is a strategy to help you pass. You will also be expected to read other materials in addition to the textbook to give you differing viewpoints and to develop your critical thinking. You are most welcome to set up meetings with your instructors to discuss any issue about the subject. GREEN CAMPUS strategy:assignments for this subject will be preferably handed in as digital documents. In the case that any assignment is required to be submitted in paper, students will (1) avoid the use of plastic, (2) use both sides of the paper sheet and (3) use recycled paper.

(*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
