

Teaching Guide

Teaching Guide				
Identifying Data				2017/18
Subject (*)	Molecular Genetics		Code	610G02020
Study programme	Grao en Bioloxía			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	1st four-month period	Third	Obligatoria	6
Language	Galician			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía			
Coordinador	Insua Pombo, Ana Maria		E-mail	ana.insua@udc.es
Lecturers	Insua Pombo, Ana Maria Martinez Martinez, M. Luisa Vila Sanjurjo, Antón		E-mail	ana.insua@udc.es m.l.martinez@udc.es anton.vila@udc.es
Web				
General description	This course focuses on the conceptual and methodological bases necessary to understand the organization, expression, variation and manipulation of genetic material. It provides a molecular perspective to knowledge in "Genetics" (second year) and knowledge necessary to address "Population Genetics and Evolution", "Cytogenetics" and related courses of third and fourth year.			

Study programme competences

Code	Study programme competences
A5	Analizar e caracterizar mostras de orixe humana.
A11	Identificar e analizar material de orixe biolóxica e as súas anomalías.
A12	Manipular material xenético, realizar análises xenéticas e levar a cabo asesoramento xenético.
A15	Deseñar e aplicar procesos biotecnolóxicos.
A29	Impartir coñecementos de Bioloxía.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
B1	Aprender a aprender.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B5	Traballar en colaboración.
B7	Comunicarse de maneira efectiva nunha contorna de traballo.

Learning outcomes

Learning outcomes	Study programme competences		
General knowledge and understanding of the molecular basis of the organization, expression, variation and manipulation of genetic material	A11	B1	
	A12	B2	
	A15	B3	
	A29	B5	
		B7	

Knowledge of the basic methodologies used in Molecular Genetics.	A5 A11 A12 A15 A29 A30 A31	B1 B2 B3 B5	
Ability to use sources of information of interest in Molecular Genetics.	A5 A11 A12 A15 A29	B1 B2 B3	
Ability to interpret and transmit information of Molecular Genetics	A29	B1 B2 B3 B5 B7	

Contents	
Topic	Sub-topic
1.- GENOME ORGANIZATION	Genome size. Prokaryotic and eukaryotic genomes. Single-copy and repetitive DNA sequences. Gene families. Centromeres. Telomeres. Organelle genomes.
2.- DNA REPLICATION	Semiconservative DNA replication: the Meselson and Stahl experiment. Modes of replication. Enzymology of the replication. DNA replication in Escherichia coli. DNA replication in eukaryotes. Telomere synthesis. Replication of mitochondrial and chloroplast DNA.
3.- SYNTHESIS AND PROCESSING OF RNA	Classes of RNA. RNA polymerases. Promoters and transcriptional apparatus. Transcription in prokaryotes and eukaryotes: initiation, elongation and termination. Interrupted genes: exons and introns. Processing of eukaryotic pre-mRNA. Synthesis and processing of pre-rRNA. Synthesis and processing of pre-tRNA. RNA edition. Revision of gene concept.
4.- TRANSLATION	The one gene-one enzyme hypothesis. The genetic code: characteristics and experiments to decipher the code. Initiation of translation. Elongation of the polypeptide chain. Termination of translation. Messenger RNA surveillance.
5.- MUTATION AND DNA REPAIR	Molecular basis of spontaneous mutations: replication errors, unequal crossing over, spontaneous chemical changes. Molecular basis of induced mutations: chemical and physical agents. Repair mechanisms: direct reversal of damaged DNA, excision repair, mismatch repair, repair of double-strand breaks, translesion synthesis.
6.- MOLECULAR MECHANISM OF GENETIC RECOMBINATION	The role of genetic recombination. Gene conversion. Models of homologous recombination: Holliday model and double-strand break model. Enzymes required for recombination. Site-specific recombination. Immunoglobulin gene rearrangements.
7.- TRANSPOSABLE GENETIC ELEMENTS	Transposable elements in prokaryotes: insertion sequences, composite transposons and noncomposite transposons. Replicative and non replicative transposition. Transposable elements in eukaryotes: transposons and retrotransposon. Evolutionary significance of transposable elements.
8.- RECOMBINANT DNA TECHNOLOGY	Restriction enzymes. Cloning vectors. DNA libraries: construction and screening. Southern and northern blotting. PCR. Restriction maps. DNA sequencing. Site-directed mutagenesis.

9.- APPLICATIONS OF RECOMBINANT DNA TECHNOLOGY	Expression of eukaryotic genes in E. coli. DNA transfer to eukaryotic cells. Transgenic animals. Transgenic plants. Gene therapy. Molecular markers. DNA fingerprinting. Genetic diagnosis. Synthetic genomes. Genome editing: CRISPR/Cas9 technology.
10.- GENOMICS	Physical and genetic mapping. Whole genome sequencing. Genome annotation. DNA microarrays. Reverse Genetics. Comparative genomics. Metagenomics.
11.- REGULATION OF GENE EXPRESSION IN BACTERIA	Jacob and Monod's operon model for the regulation of lac genes in E. coli. Positive control of the lac operon. The arabinose operon of E. coli: positive and negative control. The triptophan operon of E. coli: negative control and attenuation. RNA-mediated regulation.
12.- REGULATION OF GENE EXPRESSION IN EUKARYOTES	Changes in chromatin structure. DNA methylation. Transcriptional control. RNA processing control. Control of mRNA stability. Control at the level of translation. RNA interference. Epigenetics.
13.- GENETIC CONTROL OF DEVELOPMENT	Basic events of development. Drosophila development stages. Maternal-effect, segmentation and homeotic genes in Drosophila. Homeobox genes in other organisms. General aspects of Caenorhabditis elegans development. Genetic control of flower development in Arabidopsis.
PRACTICE 1: DNA EXTRACTION	Genomic DNA extraction. Agarose gel electrophoresis for DNA. DNA quantification.
PRACTICE 2: PCR	PCR amplification of the CHD gene. Analysis of an intron polymorphism for bird sexing.
PRACTICE 3: DOT-BLOT	Nucleic acids hybridization: detection of microsatellite sequences by dot-blot
PRACTICE 4: BIOINFORMATICS.	Database search and comparison of nucleic acid sequences. Primer design.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A5 A11 A12 A15 B2 B3 B7	28	42	70
Seminar	A5 A11 A12 A15 A29 B1 B2 B3 B5 B7	8	12	20
Laboratory practice	A5 A11 A12 A15 A30 A31 B1 B2 B3 B5 B7	15	7.5	22.5
Supervised projects	A5 A11 A12 A15 A29 B1 B2 B3 B5 B7	0	29.5	29.5
Mixed objective/subjective test	A5 A11 A12 A15 A29 B1 B2 B3 B7	6	0	6
Personalized attention		2	0	2
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	The teacher explains the main contents of each lesson.
Seminar	Resolution/discussion of questions and problems related to the subject.
Laboratory practice	The student conducts laboratory experiences following a protocol, under the supervision of the teacher.
Supervised projects	Solving of three questionnaires with exercises and questions related to some aspect of the subject as well as a practical case related to Bioinformatics. Questionnaires shall be delivered in writing and the practical case will be orally defended. Both activities are done in groups.
Mixed objective/subjective test	Objective test, short answer questions and problem resolution.

Personalized attention

Methodologies	Description
Supervised projects	Individually or in group, students can attend tutorial sessions to consult any doubts that might arise from the different activities.

Assessment

Methodologies	Competencies	Description	Qualification
Supervised projects	A5 A11 A12 A15 A29 B1 B2 B3 B5 B7	Assessment will be based on providing correct answers, clarity of explanations and documentary sources used. Questionnaires and practical case represent 15% and 10% of the final grade, respectively. The score depends on work carried out at personal (50%) and group level (50%).	25
Mixed objective/subjective test	A5 A11 A12 A15 A29 B1 B2 B3 B7	The degree of general knowledge and understanding of the subject will be assessed. Consists of two parts. One is related to theoretical content and represents 70% of the score. The other is related to the laboratory practices and represents 10% of the score.	75

Assessment comments

To pass the course, the score must be 5 or higher but with at least a 4 in each part of the test. If the sum of the score of all activities is higher than 5 but the score on one part of the test is lower than 4, the final score is 4.9 (failing score).

The grade of Non Attendance (NP) will be applied to the students that do not attend the official exam.

Preferably, first class honors will be awarded in January among students with a score of 9 or higher.

A mid-term exam will be held. A score of 5 or higher will be maintained until July.

In July there is the opportunity to retake only the test. The January's score of the supervised projects is maintained.

In the case of justified exceptional circumstances, additional measures may be taken, so that the student can pass the subject, such as flexibility in the delivery date of supervised projects, flexibility in practice schedules or a global assessment test of the learning results.

Recommendations

Subjects that it is recommended to have taken before

Biology: Basic Levels of Organisation of Life I (Cells)/610G02007
 Biochemistry I/610G02011
 Biochemistry II/610G02012
 Microbiology/610G02015
 Genetics/610G02019

Subjects that are recommended to be taken simultaneously

Subjects that continue the syllabus

Population Genetics and Evolution/610G02021
 Cytogenetics/610G02022

Other comments

Recommendations: Attend class and follow the development of the course regularly. Check Moodle and email regularly to obtain the materials and know the schedule of activities. Attend tutorials to resolve any questions or difficulties that may arise. Consult the recommended bibliography. Keep up-to-date with course work.
