General description	This is a course focusing on the st	udy of eukaryotic ch	romosome fro	om the structural, fun	ctional and evolutionary	
	perspective. In this area seek to improve the knowledge acquired in the molecular genetics and genetic materials. Special					
	emphasis on the organization of the genetic material and their implications in the evolution of genomes, their variation and					
	handling will be done.					

	Study programme competences
Code	Study programme competences
A1	Recoñecer distintos niveis de organización nos sistemas vivos.
A2	Identificar organismos.
A11	Identificar e analizar material de orixe biolóxica e as súas anomalías.
A16	Realizar cultivos celulares e de tecidos.
A26	Deseñar experimentos, obter información e interpretar os resultados.
A29	Impartir coñecementos de Bioloxía.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
B1	Aprender a aprender.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B5	Traballar en colaboración.
B6	Organizar e planificar o traballo.
B8	Sintetizar a información.
B9	Formarse unha opinión propia.
B10	Exercer a crítica científica.
B11	Debater en público.

Learning outcomes	
Learning outcomes	Study programme
	competences

Deepen your knowledge of the organization of hereditary material with an evolutionary approach through the study of chromosomes and their variations. A30 A31 A31 A31 A33 A33 A33 A33 A34 A34 B To understand the fundamentals involve when learning about chromosome and familiar with the basic methodology employed for the study of chromosomes. Tools for cytogenetics. A31 A31 A32 A33 B Search and use of different literature and databases that allow carrying out the scientific approach to a topic related to chromosomes sources, organization, function and evolution. Management information sources of interest in cytogenetics.

	Contents		
Торіс	Sub-topic		
Block 1 Structural and Organization Genomes	1Organization of genomes from viruses to eukaryotes. Evolutionary aspects.		
	2The chromosomes are chromatin		
	3Levels of organization		
	4 - Structure of metaphase chromosomes		
	5Induced chromosome structure: Bands vs isocoras.		
	6Linkage and mapping		
Block 2 Chromosomes, celular reproduction and function	1Control of the cell cycle. Cycle disorders		
	2 - Evolution of the mitotic mechanism		
	3replication and chromosomal regions		
	4Evolution of meiosis and its genetic consequences. Meaning of sexual		
	reproduction.		
	5 - Different karyotypes and their use		
	6Chromosomes and gene function		
Block 3Chromosome variation and evolution	1Chromosomal rearrangements and their significance in evolution.		
	2Genetic consequences of numerical and structural variations .		
	3 Chromosomal polymorphisms: evolutionary aspects.		
Block 4 Cytogenetics applications.	1The chromosomes in plants and animals. Evolutionary aspects.

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Collaborative learning	Students work in groups of 2 or 3 and work collaboratively to effectively solve an assigned topic each block. They should learn
	to arrange and organize work among them. Perform appropriate to the subject under study literature searches .
	It is a mandatory activity
Oral presentation	The collaborative work by the group, will be presented orally at the end of each block. Throughout the course there will be at
	least three oral presentations for each student. It will consist of transmitting the rest of the seminar co-dossier prepared by the
	gruo (2-3 students) together.
	Each team member will present a part of the joint seminar, trying to fit it in coordination with their peers. It is a mandatory
	activity.
Objective test	Students will perform a final test consisting of different short questions that reflect different aspects learned throughout the
	course
	It is mandatory activity.
Guest lecture /	The teacher explains the fundamental contents of each thematic block and identifies the associated activities.
keynote speech	Attendance at these lectures and interactive sessions will be positively evaluated.
	The assitance will be assessed.
Laboratory practice	Laboratory practices related to the development of chromosomes and karyotypes were developed.
	It will be know the cell cultures, making the karyotype and develop some method of chromosome banding.

Personalized attention			
Methodologies	Description		
Laboratory practice	Throughout the course, the teacher will be available during the hours of interactive lectures, group tutorials / small group and		
Collaborative learning	individual tutoring for answering questions, guiding the development of seminars / group work and all matters related to the		
	organization of matter.		

		Assessment	
Methodologies	odologies Competencies Description		Qualification
Guest lecture / keynote speech	A26 A29 B1 B8 B11	In the keynote session, the teacher will explain the fundamental contents of each thematic block of matter. Attendance at these classes enables the treatment of questions and issues that may arise and further clarifies and organizes collaborative work group will be further developed and that will be lectures on oral presentations. Assisting them continuously is recommended.	10
Objective test	A1 A16 B3 B8 B9 B10	The final test will take place on the field marked by the Faculty. Consist of a few short questions about the novel contributions learned in the course ideas and reflection of learning as well as the realization in the responses, personal opinions and scientific literature specific answers to questions will be assessed.	35

Oral presentation	B5 B6 B8 B9 B10 B11	Clarity and precision in the presentation will be assessed. Suitable and current	30
		content. Synthesis capacity, motivation and debate. Both the submitted writen report	
		and oral presentation will contribute to the assessment.	
Laboratory practice	A11 A16 A26 A29	Take into account the interest to learn techniques on chromosomes, skill in the	10
	A30 A31 B1 B5	laboratory experiments ability to solve chromosomes and the attitude and ability to	
		function in the laboratory.	
Collaborative learning	A1 A2 A11 A16 A30	Students will form working groups and the way teamwork is valued, how they solve	15
	A31 B1 B2 B3 B5 B6	the problems, the strategy when conducting literature searches to resolve the issue	
	B11	raised and its ability to incorporate new knowledge acquired in years above. Group	
		work and coordination are essential in this regard. Their aptitude and attitude will be	
		assessed throughout the course.	

Assessment comments

The final test and practical clases are essential and mandatory activity.

In the case of justified exceptional circumstances, additional measures may be taken so that the student can pass the subject, such as flexibility in the delivery date of supervised projects, flexibility in practice schedules or a global assessment test of the learning results.

Complementary	En primer lugar, los alumnos consultarán los libros recomendados en las materias de Genética y Genética Molecular
	para recordar los contenidos y conocimientos adquiridos previamente. A continuación realizarán una búsqueda
	bibliográfica específica en libros, artículos de revisión, publicaciones específicas que permitan incrementar el
	aprendizaje de la materia, teniendo como eje fundamental el cromosoma mitótico.La realización de una buena
	búsqueda bibliográfica estará presente en todas las valoraciones de las actividades propuestas.
