Identifying Data				2018/19
Subject (*)	Botanical Geography: Geobotany	Code	610G02026	
Study programme	Grao en Bioloxía			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Fourth	Optional	6
Language	SpanishGalician			
Teaching method	Face-to-face			
Prerequisites				
Department	Bioloxía			
Coordinador	Cremades Ugarte, Javier	E-mail	javier.cremades@udc.es	
Lecturers		E-mail		
Web				
General description	Geobotany and Plant Geography are eminently integrative sciences that aim at recognising and studying the relationships between plant communities and the environment they live in. In this course we will focus on the factors (present and historical) that determine the distribution of plants in Earth and also on the methods used to study them. We will also try to understand how plant communities work, paying special attention to the relationships among plants (autoecology) and plant communities (synecology). Finally, we will analyse some of the most relevant plant and algae communities growing in Galicia and the Iberian Peninsula.			

Study programme competences / results	
Code	Study programme competences / results
A1	Recoñecer distintos niveis de organización nos sistemas vivos.
A2	Identificar organismos.
A4	Obter, manexar, conservar e observar espécimes.
A6	Catalogar, avaliar e xestionar recursos naturais.
A11	Identificar e analizar material de orixe biolóxica e as súas anomalías.
A19	Analizar e interpretar o comportamento dos seres vivos.
A20	Muestrear, caracterizar e manexar poboacións e comunidades.
A22	Describir, analizar, avaliar e planificar o medio físico.
A24	Xestionar, conservar e restaurar poboacións e ecosistemas.
A27	Dirixir, redactar e executar proxectos en Bioloxía.
A29	Impartir coñecementos de Bioloxía.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
A32	Desenvolverse con seguridade no traballo de campo.
B1	Aprender a aprender.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B4	Traballar de forma autónoma con iniciativa.
B5	Traballar en colaboración.
B6	Organizar e planificar o traballo.
B7	Comunicarse de maneira efectiva nunha contorna de traballo.
B8	Sintetizar a información.
B9	Formarse unha opinión propia.
B12	Adaptarse a novas situacións.
C1	Expresarse correctamente, tanto de forma oral coma escrita, nas linguas oficiais da comunidade autónoma.
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.

C4	Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común.

Learning outcomes			
Learning outcomes	Study programme competences / results		
- Understanding the relationship between plants and algae and their environment.	A1 A19 A22 A27 A29	B1 B4 B8	
- Knowing the diversity of terrestrial and marine plant/algae communities.	A1 A2 A19 A27 A29	B1 B4	
- Acquiring skills for the observation, description and identification of plant/algae communities.	A1 A2 A6 A11 A20 A22 A27 A29 A30 A32	B1 B2 B3 B4 B7 B8	C3
- Acquiring skills for the critical management of bibliography and other sources of information.	A27	B1 B4 B8 B9	C3
- Learning basic field and laboratory procedures for the reconnaissance and inventory of plant/algae communities.	A1 A2 A4 A6 A20 A22 A27 A29 A30 A31 A32	B1 B2 B3 B4 B5 B6 B7 B8 B12	C1 C3
- Encourage students to further research and study Plant Geography as an integrative science essential to their development as field biologists.		B1 B3 B9	C4
- Understanding the diversity of plant/algae communities in their surroundings and their great floristic and biogeographic value.	A1 A24 A27 A29	B1 B9	C4

Contents	
Topic	Sub-topic
Lectures 1: Introduction	1. Geobotany and Plant Geography. Links with other biological sciences.
Lectures 2: Phytochorology and Phytocoenology (Plant Geography and Ecology)	2. Plant geographical distribution areas; typology. Cosmopolitism. Edemicity. Migration routes and relict elements. Chorology. Molecular methods in the study of plant chorology and biogeography. 3. Biogeographic areas. Typology of land phytocoenosis (plant communities). The Holarctic Kingdom. Delimitation and bioclimatic characterization. Biogeographic units in the North Atlantic. Oceanographic delimitation and characterization. 4. Vegetation structure. Physical structure; vertical and horizontal structure. Biological structure. Vegetation dynamics. Plant succession and vegetation series. Potential vegetation (climax community). Degradation and secondary succession. Progressive and regressive series. 5. Methodology for the study and classification of plant communities. Historic background. Physiognomic method. Sigmatism.
Lectures 3: Land vegetation	6. The Holarctic Kingdom. Vegetation of the Eurosiberian, Mediterranean and Macaronesian regions. 7. The Iberian Peninsula. Eurosiberian region; chorological provinces. Delimitation and bioclimatic characterization. Relevant and characteristic plant communities. Mediterranean region; chorological provinces. Delimitation and bioclimatic characterization. Relevant and characteristic plant communities. 8. Vegetation in Galicia; characterization. Forests, characteristics and phytosociology. Class Pino-Juniperetea. Class Quercu-Fagetea. Class Quercetea ilicis. 9. Forests, characteristics and phytosociology. Class Cytiseteta scopario-striatii. Class Calluno-Ulicetea and Class Cisto-Lavanduletea. 10. Plants at the margins. Coastline vegetation. Hygrophilous and hydrophilous vegetation. Saxicolous vegetation. Ruderal plant communities.
Lectures 4: Introduction to marine vegetation	11. Vegetation in the sea. Introduction, main features and differences with the land. Divisions in the marine environments. Ecological factors that influence on the distribution of the marine phytobenthos. Physical, chemical and biological factors affecting the marine phytobenthos. 12. Phytobenthonic ecology. Biological forms, life cycles and adaptations to the marine environment. Main features of the phytobenthonic communities. 13. Biogeography of marine organisms. Vertical and horizontal dimensions in the distribution of marine vegetation. Succession in marine plant communities. 14. Benthic marine vegetation in the North Atlantic and the Mediterranean. Benthic vegetation in Galicia. Coastline typology and main vegetation units.
Seminars	- Introduction to the analysis of floristic inventories. - Ordination and classification of inventories from marine (algae) and land plant communities. - Analysis of the physical, biological and chorological structure in marine (algae) and land plant communities.
Laboratory sessions	- Field sessions to work in the recognison and in situ analysis (floristic inventories) of plant and algae communities. - Lab sessions working on the identification of the samples collected in the field.
Estudo de casos	-Estudo integral da flora e vexetación dun territorio previamente seleccionado.

Methodologies	
Methodologies	Description
Case study	The students (in pairs or small groups) will identify and map the different plant communities in an area chosen by the teachers. Subsequently, they will write a report including all their findings as well as a complete inventory of the different communities. This report will be submitted as the final task of the course.
Field trip	Short fieldwork sessions will be conducted in nearby areas practice the different basic methods of vegetation analysis. Special attention will be paid to frequent vegetation types in Galicia: forests, coastal shrublands, etc.
Laboratory practice	The students will use the laboratory sessions for the study and identification of the samples taken while conducting their case study.
Guest lecture / keynote speech	The teachers will introduce the basic concepts of the course presentations and other resources that will be available to the students.
Seminar	During the seminars, the students will become familiar with some basic computer methods for vegetation ordination, classification and analysis. In these seminars, the students will use the data generated by them in the field and also data provide by the teachers. Seminars are oriented to the completion of the case study.

Personalized attention	
Methodologies	Description
Case study	Guidance will be available to the students in order to solve possible doubts or problems that might arise during the course. Ideally, the student should make appointments with the lecturers by e-mail.

keynote speech	

Assessment			
Methodologies	Competencies / Results	Description	Qualification

Case study	A1 A2 A4 A6 A11 A19 A20 A22 A24 A27 A29 A30 A31 A32 B1 B2 B3 B5 B6 B7 B8 B9 B12 C1 C3 C4	Different aspects will be considered in the assessment of the case study report: its structure, the quality of the data generated and of the data analysis and discussion. Presentation will also be assessed by the teachers.	40
Field trip	A31 A32 B1 B2 B3 B5 B6 B7 B8 B9 B12 C1 C3 C4	Attendance and participation will be valued.	5
Laboratory practice	A2 A4 A11 A29 A30 A31 B1 B4 B5 B7 B8 C1 C3	Attendance and participation will be valued.	5
Guest lecture / keynote speech	A1 A19 A22 A24 A27 A29 B1 B3 B4 B7 C1 C3	The students will take a written exam to demonstrate that they have acquired the contents of the course.	50

Assessment comments

In order to pass the course in the first opportunity, the student will have to participate in at least 70% of the programmed activities. In addition to this, the student will have to obtain a score of 4/10 in the final exam. In the second opportunity (july), the student will take a new written exam (60% of the final grade) and they will also take a practical exam involving plant and community identification and work with community inventories (40% of the final grade). In the cases where the student has successfully completed the report in the first opportunity, this practical exam can be waived (depending on the quality of the report).

Qualifications obtained in one course will not be kept for the following one. In order to be qualified as "non presentado" the student must not have participated in activities that are worth more than 30% of the final grade of the course. Part-time students or students who participate in equality and diversity

support programs are welcome to participate in this subject. The teachers will adapt the different compulsory activities in order to enable these students to fulfill the aims of the course.
