| General description | Paleobiology studies biological processes occurring at geological time scales. After introducing the main features of the fossil record, other aspects, such as the analysis of organic form, the role of the fossil record on the development of modern Evolutionary Theory, or the analysis of paleoecological and paleobiogeographical processes from an evolutionary perspective, are considered. An specific section is reserved for an overview of the evolution of biodiversity over geologic time, establishing the different relationships that allow us to understand our planet as a system.<br><br>The subject has a strong conceptual focus, leaving more descriptive issues (Systematic Paleontology) for the laboratory sessions. |        |   |           |

|                  |   |
|------------------|---|
| Contingency plan | <p>1. Modifications to the contents</p> <p>The contents will not be modified, but the description of the main fossil groups making up the labs will be adjusted to the limitations imposed by online teaching.</p> <p>2. Methodologies</p> <p>*Teaching methodologies that are maintained</p> <p>Lectures<br/>Workshops<br/>Labs<br/>Tests (but see below)</p> <p>*Teaching methodologies that are modified</p> <p>All teaching methodologies will be adapted to an online style. This means that lectures, workshops, and labs will be adapted to online delivery. Tests, which constitute the basis of the continuous assessment, will also be taken by the students online, unless monitoring of test cheating by the lecturers cannot be guaranteed (see below). If this is the case, the continuous assessment will be cancelled, and grading will rely on the results of the final exams of January and/or July.</p> <p>3. Mechanisms for personalized attention to students</p> <p>Personalized attention will be provided online, preferentially via UDC's implemented Microsoft Teams. Moodle and Email will also be used.</p> <p>4. Modifications in the evaluation</p> <p>Online testing on a continuous basis will be the preferred choice, unless monitoring of test cheating cannot be guaranteed. If this is the case, the continuous assessment will be cancelled, and grading will rely on the results of the final exams (January and/or July calls). More weight will be given to the lecture's contents in the final grade, as follows:</p> <p>Lectures: 75%<br/>Workshops: 15%<br/>Labs: 10%</p> <p>*Evaluation observations:</p> <p>None</p> <p>5. Modifications to the bibliography or webgraphy</p> <p>None</p> |

| (*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students. |                          |                      |                               |             |

| Methodologies                  |  |
|--------------------------------|--|
| Methodologies                  | Description  |
| Guest lecture / keynote speech | Lectures will be devoted to topics related to principles and problems in paleontology, as well as to the history of life on Earth. Students are expected to take their own notes. Reading assignments from specific topics delivered during the lectures are also expected to be completed.  |
| Workshop                       | Workshops aim to introduce the students to basic techniques and methodologies currently used in the study of fossils. For these tasks, virtual models of fossil specimens and specific software will be used. Students will be required to take their own notes and answer the workshop quizzes. Attendance to the workshops is compulsory to pass the course. |
| Laboratory practice            | Laboratory sessions will be devoted to the recognition of the basic morphological features of the main groups of fossils, as well as on the identification of important taxa from the Iberian Peninsula. Students will be required to take their own notes and answer the lab quizzes. Attendance to the lab sessions is compulsory to pass the course.        |
| Objective test                 | Grading is primarily based on the idea of continuous assessment and so, the final exam IS NOT REQUIRED for those students being successful during this continuous assessment. Students failing specific parts or the whole subject are required to make the final exam for the parts they failed   |

| Personalized attention  |   |
|---|---|
| Methodologies   | Description   |
| Workshop<br>Laboratory practice<br>Guest lecture / keynote speech<br>Objective test | Attendance to tutorials is expected, especially for those aspects showing greater difficulty, such as quizzes solving, tests, or workshop/laboratory observations.<br><br>Part-time students not capable of attending to the workshops and/or lab sessions are eligible to get an exemption of these compulsory tasks in the scheduled programme. They will however be required to perform the tasks associated to the workshops and labs in a different schedule adapted to their job obligations. |

| Assessment                     |                       |  |               |
|--------------------------------|-----------------------|--|---------------|
| Methodologies                  | Competencies          | Description  | Qualification |
| Workshop                       | A1 A2 A3 A4 A29 B1 B2 | Continuous assessment using quizzes involving multiple choice, matching, true-false questions, fill in the blank questions or short answer and essay questions. These quizzes make up 15% of the final grade   | 15            |
| Laboratory practice            | A1 A2 A3 A4 A29 B1 B2 | Continuous assessment using quizzes involving multiple choice, matching, true-false questions, fill in the blank questions, short answer, essay questions or fossil identifications with real specimens  | 25            |
| Guest lecture / keynote speech | A3 A29 B1 B2          | Continuous assessment will take place using in-class quizzes and participation during classes. All quizzes can involve multiple choice, matching, true-false questions, fill in the blank questions or short answer and essay questions. Quizzes make up 60% of the final grade.   | 60            |
| Objective test                 | A1 A2 A3 A4 A29 B1 B2 | As stated in Step 5, grading is primarily based on the idea of continuous assessment and so, the FINAL EXAM IS NOT REQUIRED for those students being successful during this continuous assessment. For the rest of students a final exam will be carried out for the specific parts of the subject (i. e., lectures 65%, workshops 25% or lab sessions 25%) that they failed | 0             |
| Others                         |                       |  |               |

| Assessment comments |
|---------------------|
|---------------------|

Students are required to obtain a final grade of at least 5.0 out of 10 to pass this subject. However, all the activities making up the assessment (lectures, workshops and lab sessions) can be compensated among them getting a grade of at least 4.0. Students passing any of the three parts (lectures, workshops and lab sessions) are given the opportunity to keep this mark for the two grading opportunities (January and July), being only examined of those parts which they failed. However, all the teaching-learning process of this subject is based on the idea of being developed in the current term. This means that for successive terms the student is supposed to fulfill all the assignments scheduled for those specific terms.

Under exceptional

justified reasons, such as part-time learning, or students with special educational needs, specific assessments could be undertaken.

The grade "no show" will

be given only to those students who have not participated in more than 20% of the assessed activities during the term.

The grade "No Show" will be given only to those students who have not participated in more than 20% of the activities being assessed during the term. The before mentioned instructions also apply for part-time students.

Students

are required to obtain a final grade of at least 5.0 out of 10 to pass this subject. However, each of the three main parts making up the assessment (theory, case studies and lab sessions) can be compensated among them obtaining a mark of at least 4.0. Students passing any of the three parts (theory, case studies and lab sessions) are given the opportunity to keep this mark for the two (January and July) grading opportunities, being only examined of those parts which they failed. However, all the teaching-learning process of this subject is based on the idea of being developed in the current term. This means that for successive terms the student is supposed to fulfill all the assignments scheduled for these specific terms.

The

grade "no show" will be given only to those students who have not participated in more than 20% of the assessed activities during the term.

Students are required

## Students

are required to obtain a final grade of at least 5.0 out of 10 to pass this subject. However, each of the three main parts making up the assessment (theory, case studies and lab sessions) can be compensated among them obtaining a mark of at least 4.0. Students passing any of the three parts (theory, case studies and lab sessions) are given the opportunity to keep this mark for the two (January and July) grading opportunities, being only examined of those parts which they failed. ## Recommendations

Subjects that it is recommended to have taken before

Geology/610G02004

Physical Geography/610G02006

Genetics/610G02019

Population Genetics and Evolution/610G02021

Plant Systematics: Cryptogamia/610G02024

Plant Systematics: Phanerogamia/610G02025

Zoology I/610G02031

Zoology II/610G02032

Ecology I: Individuals and Ecosystems/610G02039

Ecology II: Populations and Communities/610G02040

## Subjects that are recommended to be taken simultaneously

Animal Biodiversity and the Environment/610G02033

## Subjects that continue the syllabus

Developmental Biology/610G02010

Functional Adaptations of Animals in the Environment/610G02037

## Other comments

Students having specific questions or wanting to discuss class materials are always welcome during the lecturer's office hours. It is highly recommended that they communicate any kind of problem affecting their class performance, ability to take tests or class attendances, especially in the case of foreign students. If you have specific questions or want to discuss class material, I am more than happy to meet with you and help. I cannot be your personal tutor, however it is important that you communicate to me any problems you are having that may affect your class performance, your ability to take an exam, or your class attendance.
