Identifying Data			2021/22	
Subject (*)	Edaphology		Code	610G02045
Study programme	Grao en Bioloxía			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Fourth	Optional	6
Language	English			
Teaching method	Face-to-face			
Prerequisites				
Department	BioloxíaCiencias da SaúdeFísica e Ciencias da TerraMatemáticas			
Coordinador	Paz Gonzalez, Antonio	E-mail	antonio.paz.gonzalez@udc.es	
Lecturers	Lado Liñares, Marcos López Vicente, Manuel Paz Gonzalez, Antonio Vidal Vázquez, Eva	E-mail	marcos.lado@udc.es manuel.lopez.vicente@udc.es antonio.paz.gonzalez@udc.es eva.vidal.vazquez@udc.es	
Web				
General description	The program of Soil Science focuses on: a) the study of the organic and mineral soil composition, b) soil physical and chemical and biological properties, c) ecological relevance of soil functions.			
Contingency plan	<p>NOTE. THIS IS ONLY A SUMMARY OF THE CONTINGENCY PLAN. For more information see also the spanish version.</p> <p>1. Modifications to the contents, No modifications, regarding keynote speech and projects, Main practical work will be also maintained.</p> <p>2. Methodologies *Teaching methodologies that are maintained Presentail laboratory work willl be maintained as much as possible. So, keynote speech and project may be first modified.</p> <p>*Teaching methodologies that are modified First keynote speech and project will be performed using non presential tools. Practical work becomes non presential only if total lockdown is mandatory.</p> <p>3. Mechanisms for personalized attention to students</p> <p>4. Modifications in the evaluation No modifications Increasing use of e-mail. Use of TEAMS and other platforms.</p> <p>5. Modifications to the bibliography or webgraphy No modifications. However additional materials, naunly presentations and videos will be provided to the students.</p>			

Study programme competences	
Code	Study programme competences
A2	Identificar organismos.
A6	Catalogar, avaliar e xestionar recursos naturais.
A20	Muestrear, caracterizar e manexar poboacións e comunidades.
A21	Deseñar modelos de procesos biolóxicos.

A22	Describir, analizar, avaliar e planificar o medio físico.
A23	Avaliar o impacto ambiental. Diagnosticar e solucionar problemas ambientais.
A24	Xestionar, conservar e restaurar poboacións e ecosistemas.
A25	Desenvolver e aplicar técnicas de biocontrol.
A26	Deseñar experimentos, obter información e interpretar os resultados.
A27	Dirixir, redactar e executar proxectos en Bioloxía.
A30	Manexar adecuadamente instrumentación científica.
A31	Desenvolverse con seguridade nun laboratorio.
A32	Desenvolverse con seguridade no traballo de campo.
B1	Aprender a aprender.
B2	Resolver problemas de forma efectiva.
B3	Aplicar un pensamento crítico, lóxico e creativo.
B6	Organizar e planificar o traballo.
B7	Comunicarse de maneira efectiva nunha contorna de traballo.
B8	Sintetizar a información.
B9	Formarse unha opinión propia.
B10	Exercer a crítica científica.
B11	Debater en público.
B12	Adaptarse a novas situacións.
C1	Expresarse correctamente, tanto de forma oral coma escrita, nas linguas oficiais da comunidade autónoma.
C2	Dominar a expresión e a comprensión de forma oral e escrita dun idioma estranxeiro.
C3	Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.
C4	Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común.
C5	Entender a importancia da cultura emprendedora e coñecer os medios ao alcance das persoas emprendedoras.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.
C7	Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.
C8	Valorar a importancia que ten a investigación, a innovación e o desenvolvemento tecnolóxico no avance socioeconómico e cultural da sociedade.

Learning outcomes			
Learning outcomes	Study programme competences		
Assessment of environmental impact taken into account soil diversity. Evaluation of soil contamination and techniques for soil restoration.	A6	B1	C1
	A20	B9	C5
	A22	B10	C6
	A23		
	A24		
The scientific study of the soil is important for Biologists, mainly from an ecological perspective. Soil is essential in environmental studies and soil science contributes to understand important processes such as biogeochemical cycles, the structure ecosystems and factors from which primary production depends.	A2	B10	C5
	A6		C7
	A22		C8
	A23		
	A25		
	A30		
	A31		
	A32		

The course of Soil Science is designed to provide an overview of the fundamental: Physical processes, Chemical processes, Fertility, Biology, and Land Use. Both theoretical and practical contents in Soil Science should contribute to enhance the skills of Biology students at the UDC in the use of several instrumental techniques.	A2	B2	C1
	A6	B7	C5
	A25	B12	C6
	A27		C7 C8
Soils act as substrates for vegetal communities and also as adsorbent and absorbent for nutritive, and allow life of many animal and vegetal organisms. Therefore our program pays particular attention to the ?edaphosphere? as a complex dynamic and organised site, located in the interface between biosphere, lithosphere, hydrosphere and atmosphere. Soil is also the support of man-made spaces or sites influenced by man activity, such as urban-industrial areas and transport infrastructures.	A6	B2	C2
	A20	B6	C4
	A26	B9	C6
	A27		C7
Because of the role of the soil for terrestrial ecosystems, Edaphology has a particular interest in Environmental Biology. The soil food chain describes a complex living system and how it interacts with the environment, plants, and animals. The nature of soil makes direct observation of food webs difficult. Soil microbial communities are characterized in many different ways. The activity of microbes can be measured by their respiration and carbon dioxide release. The cellular components of microbes can be extracted from soil and genetically profiled, or microbial biomass can be calculated by weighing the soil before and after fumigation.	A21	B3	C3
	A30	B8	C6
	A31	B11	C7
	A32		

Contents	
Topic	Sub-topic
I PRELIMINARY CONCEPTS	
Lesson 1.- History of Soil Science.	Origin and development of Soils Science. Main topics in Soil Science.
Lesson 2.- Soil descripton in field conditions. Laboratory techniques for soil studies.	Profile and horizons. Physical, Chemical and Bioñological methods of soil analysis.
II SOIL COMPOSITION	
Lesson 3.- Soil mineral composition. Soil clays.	Soil texture. Specific surface. Soil mineralogy. Soil clays. Structure and properties of most common soil clays. Oxyhydroxides.
Lesson 4.- Soil organic matter.	Soil organic compounds. Humus. Organo-mineral associations. Organic matter and ecosystems: biogeochemical cycles.
III SOIL PROPERTIES	
Lesson 5.- Soil physical properties and soil structure.	Bulk density and solid density. Soil porosity. Pore-size distribution. Aggregate dynamics in soils. Structural stability.
Lesson 6.- Soil water retention and water dynamics.	Soil moisture content and soil potential. Soil water measurement. Soil moisture characteristic curve. Soil water retention and soil water dynamics. Soil water and water requirements of vegetation.
Lesson 7.- Soil temperature and aeration.	
Lesson 8.- Soil pH and cation exchange capacity.	Soil thermal properties. Soil temperature management. Composition of the soil atmosphere. Soil and gases of greenhouse effect.
Lesson 9.- Soil biology.	Soil pH and soil acidity. Soil acidity effects. Acidity amendment. Exchange complex of soils. Cation exchange capacity.
Lesson 10. Soil fertility	Soil organisms. Soil enzymatic activity. Nucleic acids in soil. Soil organism and soil properties as indicators of soil quality.
	Macronutrients and micronutrients. Nitrogen , phosphorus and potassium cycles. Calcium and magnesium. Iron, cupper, zinc, boron and molybdenum. Other oligoelements

IV FACTORS AND PROCESSES OF SOIL FORMATION	Parent material. Climate. Topography. Times Vegetations and organisms. Anthropogenic factors.
Lesson 11.- Factors of soil formation.	
Lesson 12.- Processes of soil formation.	Soil profile differentiation. Clay accumulation. Podzolization. Salinization. Calcification. Hydromorphic processes. Ferralitic alteration.
V SOIL SYSTEMATICS AND CLASSIFICATION	Genesic and diagnostic horizons. Soil profile. Horizon nomenclature. Modern Soil Classifications. Soil Taxonomy. World Reference Base for Soil Resources.
Lesson 13.- Soil Systematics.	Characteristics for soil diagnosis. Moisture and temperature regimes. Orders, suborders, great groups, subgroups, families, and series.
Lesson 14.- Introduction to Soil Taxonomy.	Organic soil. Soil with anthropic influences. Soils conditioned by topography and by time. Soils conditioned by cold, temperate, steppe, arid or semiarid and tropical or subtropical climates.
Lesson 15.- World Reference Base for Soil Resources.	
Lesson 16.- Spanish and Galician Soils.	Soil under Atlantic climate. Soils under Mediterranean climate. Galician soils: parent material, climate, topography and vegetation effects.
VI APPLIED SOIL SCIENCE	Soil cartography.
Lesson 17.- Applications of Soil Science.	Interactions soil-landscape. Soil functions and society. Soil and environment. Soil contamination. Recovery of contaminated soils. Soil Use and Management.
PRACTICAL ACTIVITIES	Textural analysis Bulk density and solid density, Porosity. Aggregate stability Soil pH. Organic carbon and nitrogen Cation exchange capacity Soil extractable phosphorus Biological activity and dehydrogenase activity
Laboratory work	Case studies: Umbrisols, Cambisols, Fluvisols, and Gleysols
Field studies	

SUPERVISED PROJECTS	Soil erosion as a source of diffuse pollution Mechanisms and processes of water erosion under an Atlantic climate Effect of forest fires in soil degradation Mining and soil contamination Livestock farming and soil contamination Landfills and soil contamination Organic pollutants Physical-chemical indicators of soil quality Biological indicators of soil quality Vineyard soil in Galicia Excessive soil fertilisation with slurry Soil compactation risks Hydric balance in soils Heavy metals in soils

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A6 A21 A22 A23 A24 A27 A30 B1 C1 C2 C3	21	40	61
Supervised projects	B2 B7 B8 B9 B10 B11 B12 C6 C7	7	16	23
Field trip	A24 A32 C4 C5 C6 C7	4	10	14
Laboratory practice	A2 A20 A22 A23 A25 A26 A27 A30 A31 A32 B3 B6 B8 B9 B10 C7 C8	14	28	42
Personalized attention		10	0	10
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	The contents of soil science will be developed. The used audiovisual materials will be provided to students.
Supervised projects	These are guided and supervised academic activities
Field trip	The main soil types in Galicia will be observed.
Laboratory practice	Assessment of main physical, chemical and biological properties of soils

Personalized attention	
Methodologies	Description
Field trip Supervised projects Laboratory practice	Personalized attention will be provided by individual meetings in dates previously selected.

Assessment			
Methodologies	Competencies	Description	Qualification

Guest lecture / keynote speech	A6 A21 A22 A23 A24 A27 A30 B1 C1 C2 C3	Short questions and tests about the keynote speech. Final examination and also partial examinations, if requested.	50
Field trip	A24 A32 C4 C5 C6 C7	Assessment of field activities and reports of field work.	5
Supervised projects	B2 B7 B8 B9 B10 B11 B12 C6 C7	Quality of the reports and presentations.	30
Laboratory practice	A2 A20 A22 A23 A25 A26 A27 A30 A31 A32 B3 B6 B8 B9 B10 C7 C8	Continuous assessment and practical work.	15

Assessment comments

Soil Science global grade can be assessed by continuous evaluation following the Bologna criteria. Evaluations may be performed not only in English, but also in Galician or Spanish, if requested by the students.
