General description	The aim of this course is to provide	the student with the fund	lamental	bases to carry out su	ccessfully a research or
	industrial project in the area of high performance computing. Different tools are introduced to facilitate the developing of the				
	project as well as different example	s of projects.			

	Study programme competences / results
Code	Study programme competences / results
A8	CE8 - Be able to apply the acquired knowledge, capabilities and aptitudes to the profesional environment, planning, managing and
	evaluating project in the high performance computing field
B1	CB6 - Possess and understand the knowledge that give a baseline or opportunity to be original in the development and/or application of
	ideas, often in a research environment
В3	CB8 - The students have to be able to integrate knowledge and face the complexity to make judgments from information, despite being
	partial and limited, includes reflexions about the social and ethical responsabilities linked to the application of their judgements and
	knowledge
B5	CB10 - The students have to possess learning skills that allows them to continue to study in a mainly self-driven or autonomous manner
B6	CG1 - Be able to search and select useful information to solve complex problems, using the bibliographic sources of the field
B7	CG2 - Elaborate adqueately and originally written essays or motivated reasonings, write planings, work projects, scientific papers and
	formulate reasonable hypothesis
B9	CG4 - Be able to plan and do research, development and innovation tasks in high performance computing related environments
B10	CG5 - Be able to work in teams, specially multidisciplinary, and do a proper time and people management and decision taking
C1	CT1 - Use the basic technologies of the information and computing technology field required for the professional development and the
	long-life learning
C2	CT2 - Estimulate the capacity to work in transdisciplinary and interdisciplinary teams to offer proposals that contribute to the contribute to
	the economical, social and political sustainable development
C3	CT3 - Be able to manage time and resources: develop plannings, priorize activities, identify criticism, establish and meet deadlines
C4	CT4 - Value the importance of research, innovation and the technological development in the socioeconomical and cultural advance of the
	society
C5	CT5 - Understand the importance of the enterpeneurship culture and know the resources available for entrepeneurs

Assessment comments

First opportunity (ordinary - May)- Evaluation of the academically directed works: 90% of the final mark- Follow-up continued active participation: 10% of the final markSecond opportunity (extraordinary - July):- Evaluation of the academically directed works: it will be necessary to present the academically directed works that the students have not presented in the ordinary call, and will go back to present, after the timely modifications indicated by the professors, those that had not received a necessary minimum qualification to pass. 90% of the final mark- Follow-up continued active participation: the student will keep the mark obtained in this section in the ordinary call, since for the extraordinary call no new activities will be scheduled. 10% of the final markit will consider "no sited" all the student that have not delivered any of the works and have not participated in the proposed activities.

Part-time: given that the degree has a on-line modality, in the case of students who, in a justified way, have impediments to attendance in person, they will be evaluated with the criteria of the on-line modality.

During the evaluation, the lecturers can request the students to identify themselves by asking the passport.

Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus
Other comments
Knowledge of English, both spoken and written, is essential since many of the bibliography and external conferences can be in English.
