

Teaching Guide				
Identifying Data			2020/21	
Subject (*)	Data structures and algorithmics for biological sequences	Code	614522013	
Study programme	Mestrado Universitario en Bioinformática para Ciencias da Saúde			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	2nd four-month period	First	Obligatory	6
Language	SpanishEnglish			
Teaching method	Hybrid			
Prerequisites				
Department	Ciencias da Computación e Tecnoloxías da InformaciónComputación			
Coordinador	Ladra González, Susana	E-mail	susana.ladra@udc.es	
Lecturers	Ladra González, Susana	E-mail	susana.ladra@udc.es	
	Silva Coira, Fernando		fernando.silva@udc.es	
Web				
General description	This course introduces the basics of the algorithms and data structures that are commonly used in the field of computational biology.			

Contingency plan

1. Modifications to the contents

- No changes will be made

2. Methodologies

*Teaching methodologies that are maintained

- Guest lecture / keynote speech
- ICT practicals
- Supervised projects
- Personalized attention

*Teaching methodologies that are modified

- Mixed test: in case it cannot be performed in person, it will be replaced by "Problem solving")

3. Mechanisms for personalized attention to students

- Email: Daily. Used to make queries, request virtual meetings to resolve doubts and monitor the work being supervised.
- Moodle: Daily. According to the needs of the students. They will have "thematic forums" associated to the modules of the subject, to formulate the necessary consultations.
- Teams: Telematic session in the time slot assigned to the subject in the faculty's classroom calendar for the advancement of the expository and practical subject. Individual or small group telematic sessions to resolve doubts about the subject of the presentation, practice or supervised work

4. Modifications in the evaluation

The 30% of the mixed test is replaced by "Problem solving", which will also have a 30% weight in the evaluation. It will consist of the resolution of four exercises in which the knowledge and the competencies acquired during the master classes. The students will have to hand in the solution of the proposed exercises, having to defend it orally.

*Evaluation observations:

The minimum requirements for the different parts of the evaluation will not be applied. The final mark will be the sum of those obtained in each part.

FIRST OPPORTUNITY:

Any student who does not send a proposal for the proposed problem-solving tasks will be marked as "Non presentado" (Absent).

SECOND OPPORTUNITY:

Only those students who do not pass the subject in the first opportunity will be able to present themselves to the second opportunity. The recovery of each part will be done in the following way:

- ICT practicals (50%): students will be able to repeat the proposed ICT practicals during the course in the same conditions as in the first opportunity (the internships delivered late will obtain a maximum of 80%). Thus, in case of repeating all the practices, the maximum mark that can be obtained is 4 points.
- Supervised project (20% of the final mark): carried out under the same conditions as at the first opportunity, but on an individual basis.
- Problem solving (30%): carried out under the same conditions as the first time.
- In case of not recovering any of the parts, the grade obtained at the first opportunity in that part will be kept.
- Any student who does not opt for the recovery of any of the parties will have a grade of "Non presentado" (Absent).

5. Modifications to the bibliography or webgraphy

- No changes will be made.

Study programme competences / results	
Code	Study programme competences / results
A1	CE1 - Ability to know the scope of Bioinformatics and its most important aspects
A2	CE2 ? To define, evaluate and select the architecture and the most suitable software for solving a problem in the field of bioinformatics
A3	CE3 ? To analyze, design, develop, implement, verify and document efficient software solutions based on an adequate knowledge of the theories, models and techniques in the field of Bioinformatics
A8	CE8 - Understanding the basis of the information of the hereditary material, its transmission, analysis and evolution
A9	CE9 ? To understand the benefits and the problems associated with the sequencing and the use of biological sequences, as well as knowing the structures and techniques for their processing
B1	CB6 - Own and understand knowledge that can provide a base or opportunity to be original in the development and/or application of ideas, often in a context of research
B2	CB7 - Students should know how to apply the acquired knowledge and ability to problem solving in new environments or little known within broad (or multidisciplinary) contexts related to their field of study
B8	CG3 - Be able to work in a team, especially of interdisciplinary nature
C6	CT6 - To assess critically the knowledge, technology and information available to solve the problems they face to.
C7	CT7 ? To maintain and establish strategies for scientific updating as a criterion for professional improvement.

Learning outcomes			
Learning outcomes		Study programme competences / results	
To know the data structures and the algorithms used for compactly storing and processing of biological sequences.		AJ1 AJ2 AJ9	
To analyze and compare the data structures and the complexity of the algorithms used.		AJ2 AJ3	BJ1 CJ6 CJ7
To understand, analyze, design and implement solutions for different fundamental problems of sequence alignment, read error correction, contig assembly, gap filling, etc.		AJ1 AJ2 AJ3 AJ8 AJ9	BJ1 BJ2 BJ8 CJ6 CJ7
To explain, analyze, design and implement solutions to the problems related with evolution, such as haplotype assembly, motif finding, permutation patterns, genomic rearrangement, etc.		AJ1 AJ2 AJ3 AJ8 AJ9	BJ1 BJ2 BJ8 CJ6 CJ7

Contents	
Topic	Sub-topic
Introduction to algorithms complexity analysis	Algorithms analysis Complexity
Sequence pattern search	Exact string matching methods Approximate string matching methods Suffix trees and suffix arrays
Introduction to sequence compression and indexing	Compression techniques Indexes and self-indexes

Applications to biological sequences	Sequence comparison Motif finding Genomic rearrangements Sequence alignment Sequence assembly Phylogenetic analysis
--------------------------------------	--

Planning				
Methodologies / tests	Competencies / Results	Teaching hours (in-person & virtual)	Student's personal work hours	Total hours
ICT practicals	A2 A3 B1 B2 B8 C6 C7	14	60	74
Supervised projects	A1 A2 A3 A8 A9 B1 B2 B8 C6 C7	3	30	33
Mixed objective/subjective test	A1 A2 A3 A8 A9 B2	0	5	5
Guest lecture / keynote speech	A1 A2 A3 A8 A9	28	10	38
Personalized attention		0	0	0
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
ICT practicals	Students will complete practical exercises to develop all the knowledge acquired during lectures.
Supervised projects	Students will develop a work, individually or in small group, under the supervision of the teachers.
Mixed objective/subjective test	It consists of a written test to show that the student has acquired the knowledge and skills during lectures and practice sessions.
Guest lecture / keynote speech	Lectures where the course contents are exposed.

Personalized attention	
Methodologies	Description
Supervised projects ICT practicals	There may exist differences among the students regarding their background on algorithms and data structures. Thus, teachers will provide personalized attention for practice sessions and for the supervised project, both individual or in small groups.

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Mixed objective/subjective test	A1 A2 A3 A8 A9 B2	<p>It will consist of a written test where the students must prove the knowledge and competences acquired during lectures and practice sessions.</p> <p>To pass the course globally it is necessary to obtain in the mixed test a minimum grade of 1.5 (over 3). If that minimum grade is not achieved, the maximum grade cannot exceed 4.9 (and therefore the course is failed)</p>	30
Supervised projects	A1 A2 A3 A8 A9 B1 B2 B8 C6 C7	Students must complete a project, individually or in small groups, related with a scientific article. It must be presented in front of the teaching staff.	20

ICT practicals	A2 A3 B1 B2 B8 C6 C7	The work done by the students during practice sessions will be assessed. Students must submit bulletins with their solutions to proposed problems and defend them in front of the teaching staff.	50
----------------	-------------------------	---	----

Assessment comments

FIRST OPPORTUNITY:

Students that do not take the written exam will obtain a grade of "Non presentado" (Absent).

SECOND OPPORTUNITY:

Only those students that have not passed the course in the first opportunity can be evaluated in the second opportunity. Students can recover any of the parts as follows:

ICT practicals (50%): the students can repeat the ICT practicals under the same circumstances than in the first opportunity (those submitted out of time can obtain a maximum of 80% of the grade). Thus, in case of repeating all the assignments, the maximum grade will be 4 points.

Supervised project (20%): in the same conditions as in the first opportunity. Written test (30%): in the same conditions as in the first opportunity. In case of not retaking one of the parts, the grade obtained in the first opportunity for that part will be kept. To pass the course globally it is necessary to obtain in the mixed test a minimum grade of 1.5 (over 3). Students that do not retake any part will obtain a grade of "Non presentado" (Absent).

ADVANCED OPPORTUNITY:

The assessment for the advanced opportunity is equivalent to that of the first opportunity (50% ICT practicals, 20% supervised project, which must be done individually, and 30% written text).

ACADEMIC DISPENSATION:

Students officially enrolled part-time who have been granted an official dispensation from attending classes, as stipulated in the regulations of this University, must contact with the responsible of the course within the first two weeks to establish the conditions for submitting and defending the practical exercises and the supervised project.
