| General description      | There is no better way to prove the strength of a system than to attack it. The Intrusion Tests serve to reproduce access attempts of an attacker using the vulnerabilities that may exist in a given infrastructure. In this course the fundamental topics oriented to the intrusion tests (pentesting) will be covered, covering the different phases of an attack and exploitation (from the recognition and control of access to the erasure of tracks). |       |            |                         |

|                  |  |
|------------------|--|
| Contingency plan | <p>1. Modifications in the contents.</p> <p>No changes will be made.</p> <p>2. Methodologies</p> <p>* Teaching methodologies that are maintained</p> <p>We keep all methodologies online.</p> <p>* Teaching methodologies that change</p> <p>3. Mechanisms for personalised attention to students.</p> <p>Different tools will be used:</p> <p>Micorosft equipment: For master sessions with video recording, tutorials and laboratory practices.</p> <p>Virtual machines: For laboratory practices.</p> <p>Forms, FAITIC and moodle: For multiple choice tests and several communications.</p> <p>E-mail: For several communications.</p> <p>4. Modifications in the evaluation.</p> <p>No modifications.</p> <p>5. Modifications to the bibliography or webography.</p> <p>The master sessions will be available on video.</p> <p>In case of non-attendance teaching (either for part of the students or the whole), and if applicable:</p> <ul style="list-style-type: none"><li>- The contents of the subject will not be modified. In any case, the offer of resources will be extended by means of support material in the telematic platforms (FAITIC, MOODLE and TEAMS), but without meaning an increase in the subject.</li><li>- Neither the model nor the evaluation barometer will be modified except for subsequent rectoral resolution. In the case that both the practice and the exam cannot be done in person, both will be done using the available ICT platforms.</li><li>- In the case that the registration numbers do not respect the capacity, it must be taken into account that the students will attend classes in the classroom until the capacity is full and the rest of the students will follow the class synchronously by connecting the videoconference rooms to the synchronous online teaching systems of UVIGO and UDC. Attendance and non-attendance will be articulated on a weekly basis.</li><li>- Online access to the documentary sources of the subject (books, manuals, etc.).</li></ul> |
|                  |  |

| Study programme competences |   |
|-----------------------------|---|
| Code                        | Study programme competences                                     |
| A2                          | CE2 - Deep knowledge of cyberattack and cyberdefense techniques |

|    |  |
|----|--|
| A3 | CE3 - Knowledge of the legal and technical standards used in cybersecurity, their implications in systems design, in the use of security tools and in the protection of information  |
| A4 | CE4 - To understand and to apply the methods and tools of cybersecurity to protect data and computers, communication networks, databases, computer programs and information services   |
| A7 | CE7 - To demonstrate ability for doing the security audit of systems, equipment, the risk analysis related to security weaknesses, and for developing de procedures for certification of secure systems  |
| B1 | CB1 - To possess and understand the knowledge that provides the foundations and the opportunity to be original in the development and application of ideas, frequently in a research context   |
| B2 | CB2 - Students will be able to apply their knowledge and their problem-solving ability in new or less familiar situations, within a broader context (or in multi-discipline contexts) related to their field of specialization   |
| B3 | CB3 - Students will be able to integrate diverse knowledge areas, and address the complexity of making statements on the basis of information which, notwithstanding incomplete or limited, may include thoughts about the ethical and social responsibilities entailed to the application of their professional capabilities and judgements |
| B4 | CB4 - Students will learn to communicate their conclusions ---and the hypotheses and ultimate reasoning in their support--- to expert and nonexpert audiences in a clear and unambiguous way   |
| B5 | CB5 - Students will apprehend the learning skills enabling them to study in a style that will be selfdriven and autonomous to a large extent   |
| B6 | CG1 - To have skills for analysis and synthesis. To have ability to project, model, calculate and design solutions in the area of information, network or system security in every application area  |
| B7 | CG2 - Ability for problem-solving. Ability to solve, using the acquired knowledge, specific problems in the technical field of information, network or system security   |
| B9 | CG4 - Ethical commitment. Ability to design and deploy engineering systems and management systems with ethical and responsible criteria, based on deontological behaviour, in the field of information, network or communications security   |
| C4 | CT4 - Ability to ponder the importance of information security in the economic progress of society   |

| Learning outcomes  |  |                             |                          |

| (*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students. |                |                      |                               |             |

| Methodologies                  |  |
|--------------------------------|--|
| Methodologies                  | Description  |
| Guest lecture / keynote speech | <p>Transmission of information and key knowledge of each one of the topics. The participation of students is encouraged at certain times. As part of the methodology, a critical approach to the discipline will lead students to reflect and discover the relationships between different concepts, form a critical mentality to face the problems and the existence of a method, facilitating the learning process in the student .</p> <p>To fight against the possible passivity of the student, in small moments small questions, that reflect on the student, are presented, complementing those aspects with bibliographical references that allow him to enrich the knowledge acquired. This exchange with the student, as part of the master class, allows us to control the degree of assimilation of knowledge on the part of him.</p> <p>The magisterial lessons include, as much knowledge extracted from the references of the course, as those resulting from our own professional experiences, fostering the capacity of the critical analysis. At all times it is sought that a certain part of the content does not require the student to memorize them. This methodology will attempt to achieve a high degree of motivation in the student.</p> |
| Document analysis              | Reading and critical examination of the main ethical documents of computer science. They serve as a general introduction to the topics. They provide a historical and systematic explanation of its meaning. They are of great importance in the context of the other methodologies used in the subject.   |

|                           |  |
|---------------------------|--|
| Laboratory practice       | The laboratory practices allow to maximize the feedback, reinforcement and assimilation of the objectives. Practical developments begin with a basic practice and their difficulty increases gradually. At all times, the student presents the set of ideas and techniques that allow the practical development of the knowledge transmitted in master classes. In the practices several sections are proposed that expose a battery of difficulties treated during the study of the subject. The interrelation between the different sections will be sought, providing a context of full exercise, in order to achieve the student's vision as a whole, revealing the links between the questions that may seem very distant. In all practical classes, virtual machines are used on computers as a basic tool for solving exercises. The student can select and install the tools that he deems most appropriate in each case. In this way, you will be required, from the beginning, to face the decision making, analyzing the advantages and disadvantages in each and every one of the cases. At this initial point, personalized advice will be essential, allowing a realistic analysis of the decisions made, facilitating the feedback of new parameters not considered a priori. |
| Multiple-choice questions | This test will be oriented to determine if the student has assimilated the different objectives of the subject.  |
| Case study                | The ethical and legal analysis of information technology has specific characteristics. With the case study, it is intended to examine the structure and content of the problems present in the cases, both individually and in groups. It is a form of content learning and also methodological, in which the student learns to analyze, deliberate and reach reasonable and reasonable conclusions with ethical and legal arguments. It is very useful for exercising the abilities and argumentative abilities.  |

## Personalized attention

| Methodologies       | Description   |
|---------------------|---|
| Laboratory practice | <p>Laboratory practices: If you guide the student individually in the development of each of the laboratory practices. Although in the development of the first practice there are large differences in the needs of each student, they are progressively homogenizing in terms of their personalized attention needs. Without a doubt, the identification of this parameter is fundamental to determine that the totality of the students progresses during the development of the subject. We will also make small groups work together in practical developments.</p> <p>Personalized attention: Any technological question exposed by the student, in person, tutorials, email, etc.</p> <p>Plagiarism is regarded as serious dishonest behavior. If any form of plagiarism is detected in any of the tests or exams, the final grade will be FAIL (0), and the incident will be reported to the corresponding academic authorities for prosecution.</p> <p>All calls (first call, second call and end-of-program call) will perform an unique final assessment for both practical and theoretical.</p> |

## Assessment

| Methodologies             | Competencies | Description   | Qualification |
|---------------------------|--------------|---|---------------|
| Laboratory practice       | A4 B1 B6 B7  | Each student of laboratory practices will have to pass several tests. In it, the teacher explains small tasks that students must solve in the virtual machines of the practice laboratory. It is necessary to obtain an average grade among all the laboratory practices greater than 4 to make average.                              | 60            |
| Multiple-choice questions | B5 B6 B7     | This test includes the contents and, in general, all aspects related to the objectives of the subject. It establishes several topics related both to the content of the master sessions and to the laboratory practices, giving more weight to the first one. It is necessary to obtain an average grade higher than 4 to do average. | 40            |

## Assessment comments

## Contingency plan

In case of non-attendance teaching (either for part of the students or the whole), and if applicable:

- The contents of the subject will not be modified. In any case, the offer of resources will be extended by means of support material in the telematic platforms (FAITIC, MOODLE and TEAMS), but without meaning an increase in the subject.
- Neither the model nor the evaluation barometer will be modified except for subsequent rectoral resolution. In the case that both the practice and the exam cannot be done in person, both will be done using the available ICT platforms.
- In the case that the registration numbers do not respect the capacity, it must be taken into account that the students will attend classes in the classroom until the capacity is full and the rest of the students will follow the class synchronously by connecting the videoconference rooms to the synchronous online teaching systems of UVIGO and UDC. Attendance and non-attendance will be articulated on a weekly basis.
- Online access to the documentary sources of the subject (books, manuals, etc.).
