Teaching Guide				
Identifying Data				2020/21
Subject (*)	Instrumentation and Processing for Biomedical Applications		Code	614535012
Study programme	Máster Universitario en Visión por Computador			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	First	Obligatory	6
Language	English			
Teaching method	Hybrid			
Prerequisites				
Department	Ciencias da Computación e Tecnoloxías da Información			
Coordinador	Novo Bujan, Jorge	E-mail	j.novo@udc.es	
Lecturers	Novo Bujan, Jorge Ortega Hortas, Marcos	E-mail	j.novo@udc.es m.ortega@udc.es	
Web				
General description				
Contingency plan	1. Modifications to the contents No change. 2. Methodologies *Teaching methodologies that are maintained All of them. *Teaching methodologies that are modified The teaching will be telematic and the classes will take place synchronously in the official schedule of classes. It may be that, for reasons of inconvenience, some of the classes will be held asynchronously, which will be communicated to the students in advance. 3. Mechanisms for personalized attention to students The tutorials will be telematic and will require an appointment. 4. Modifications in the evaluation Evaluation activities that cannot be carried out in person, if they cannot be postponed, will be carried out telematically through the institutional tools in Office 365 and Moodle. In this case, a series of measures will be required that will require the students to have a device with a microphone and a camera, while no suitable evaluation software is available. Each student can be called for an interview to comment on or explain part or all of the test. The duration of the telematic activities will be a maximum of 1 hour in the case of continuous assessment tests and 2 hours in the case of a final exam. NOTE: In these scenarios, you can change the type of activities to be carried out or the modality, but not your general contribution to the final grade (the weighting percentage). 5. Modifications to the bibliography or webgraphy No change.			

Study programme competences	
Code	Study programme competences
A1	CE1 - To know and apply the concepts, methodologies and technologies of image processing
A3	CE3 - To know and apply the concepts, methodologies and technologies of image and video analysis
A7	CE7 - To understand and apply the fundamentals of medical image acquisition, processing and analysis

B2	CB7 - That students are able to apply their acquired knowledge and problem-solving skills in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study
B3	CB8 - That students are able to integrate knowledge and deal with the complexity of making judgements based on information that is incomplete or limited, including reflections on social and ethical responsibilities linked to the application of their knowledge and judgements
B5	CB10 - That students possess the learning skills to enable them to continue studying in a largely self-directed or autonomous manner
B8	CG3 - Ability to develop computer vision systems depending on existing needs and apply the most appropriate technological tools
B9	CG4 - Ability to critically analyze and rigorously evaluate technologies and methodology
B12	CG7 - Ability to learn autonomously for specialization in one or more fields of study
C4	CT4 - Ability to understand the meaning and application of the gender perspective in different areas of knowledge and professional practice with the aim of achieving a more just and equal society

Learning outcomes			
Learning outcomes	Study programme competences		
Understand the basic concepts related to different biomedical imaging modalities and the physical factors that influence their properties.	AC1 AC3 AC7	BC2 BC3 BC5 BC8 BC9 BC12	CC4
To know the statistical techniques currently used for the validation of biomedical applications.	AC1 AC3 AC7	BC2 BC3 BC5 BC8 BC9 BC12	CC4
Ability to apply different processing and analysis techniques in biomedical imaging applications.	AC1 AC3 AC7	BC2 BC3 BC5 BC8 BC9 BC12	CC4
Knowledge of image registration techniques and their applications in biomedical imaging.	AC1 AC3 AC7	BC2 BC3 BC5 BC8 BC9 BC12	CC4

Contents	
Topic	Sub-topic
Basic concepts of biomedical imaging.	
Biomedical imaging modalities.	
Validation techniques in biomedical applications.	
Biomedical image processing and analysis.	
Registration of biomedical images.	
Biomedical imaging applications.	

Planning

Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Laboratory practice	B2 B3 B8 B12	15	51.84	66.84
Supervised projects	B2 B3 B8 B12	10	34.56	44.56
Guest lecture / keynote speech	A1 A3 A7 B5 B9 C4	14	21.6	35.6
Personalized attention		3	0	3
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Laboratory practice	Practical exercises in computer classrooms, learning based on the resolution of practical cases, combining work and autonomous learning with group work for cooperative learning
Supervised projects	Presentations of project-oriented works
Guest lecture / keynote speech	Participatory Master Lessons

Personalized attention	
Methodologies	Description
Laboratory practice Supervised projects	Attention to the challenges posed to students both in the practices and in the work.

Assessment			
Methodologies	Competencies	Description	Qualification
Laboratory practice	B2 B3 B8 B12	Development practices of applied cases	50
Guest lecture / keynote speech	A1 A3 A7 B5 B9 C4	Demonstration of application of knowledge taught in class	20
Supervised projects	B2 B3 B8 B12	Practical projects related to the subject	30
