

## Teaching Guide

Teaching Guide				
Identifying Data				2019/20
Subject (*)	Boundary element methods		Code	614855230
Study programme	Mestrado Universitario en Matemática Industrial (2013)			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	2nd four-month period	First	Optional	3
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Matemáticas			
Coordinador	Gonzalez Taboada, Maria	E-mail	maria.gonzalez.taboada@udc.es	
Lecturers	Gonzalez Taboada, Maria	E-mail	maria.gonzalez.taboada@udc.es	
Web	http://www.m2i.es			
General description	We provide an introduction to boundary element methods. Using as a model a potential problem, we present the direct method and the indirect methods based on single layer and double layer formulations to solve both interior and exterior problems in two and three dimensions. We also discuss the application of boundary element methods to acoustic scattering and radiation problems.			

## Study programme competences

Code	Study programme competences
A4	Ser capaz de seleccionar un conjunto de técnicas numéricas, lenguajes y herramientas informáticas, adecuadas para resolver un modelo matemático.
A8	Saber adaptar, modificar e implementar herramientas de software de simulación numérica.
B3	Ser capaz de integrar conocimientos para enfrentarse a la formulación de juicios a partir de información que, aun siendo incompleta o limitada, incluya reflexiones sobre las responsabilidades sociales y éticas vinculadas a la aplicación de sus conocimientos.
B5	Poseer las habilidades de aprendizaje que les permitan continuar estudiando de un modo que habrá de ser en gran medida autodirigido o autónomo, y poder emprender con éxito estudios de doctorado.

## Learning outcomes

Learning outcomes	Study programme competences		
To know the advantages and limitations of the boundary element method	AC4	BC2 BR1	
To know the steps to solve a boundary value problem using the boundary element method		BC2 BR1	
To know the fundamental solutions, the integral representation formula and the boundary integral equations related to the problems considered in this subject	AC4	BC2 BR1	
Be able to construct Matlab programs that solve an elliptic problem using the boundary element method.	AC8	BC2 BR1	
To know and be able to apply the direct and indirect methods	AC4	BC2 BR1	
Given a boundary integral equation, be able to discretize it using the boundary element method and to derive the associated linear system	AC8	BC2 BR1	

## Contents

Topic	Sub-topic
-------	-----------

Introduction to the boundary element method. Potential problems.	<ul style="list-style-type: none"> <li>- Interior and exterior problems for the Laplace equation.</li> <li>- Fundamental solution for the Laplace operator.</li> <li>- Representation formulae of an harmonic function.</li> <li>- Integral equations on the boundary.</li> <li>- Direct and indirect methods. Analysis of the variational formulations.</li> <li>- Discretization. A priori error estimates.</li> <li>- Some practical considerations on the numerical solution of the discrete problem.</li> </ul>
Boundary element methods in acoustics.	<ul style="list-style-type: none"> <li>- The wave equation and the Helmholtz equation.</li> <li>- Acoustic scattering and radiation problems in harmonic regime.</li> <li>- Fundamental solutions of the Helmholtz operator.</li> <li>- Green's representation formulae. Single and double layer potentials.</li> <li>- Boundary integral equations.</li> <li>- Direct and indirect methods.</li> <li>- Discretization of the equations.</li> <li>- Implementation.</li> </ul>
Introduction to the coupling of boundary elements and finite elements	

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A4 B5 B3	14	35	49
Laboratory practice	A8 B5 B3	7	7	14
Supervised projects	A4 A8 B5 B3	1	9	10
Personalized attention		2	0	2
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	The theoretical contents will be presented through lectures.
Laboratory practice	The implementation in Matlab of the boundary element method to solve the problems considered in the subject will be shown.
Supervised projects	At the end of the course, a project will be proposed to each student.

Personalized attention	
Methodologies	Description
Supervised projects	Students can ask to the teacher any questions that arise during the performance of the project that has been proposed to them.

Assessment			
Methodologies	Competencies	Description	Qualification
Supervised projects	A4 A8 B5 B3	The evaluation of the knowledge acquired in this subject will take into account the completion of the exercises presented in the lectures (50% of the final grade) and the supervised work that will be proposed at the end of the subject (50% remaining).	100

## Recommendations

### Subjects that it is recommended to have taken before

Numerical methods and programming/614855201

Numerical methods for partial differential equations/614855204

### Subjects that are recommended to be taken simultaneously

Acoustics/614855209

### Subjects that continue the syllabus

### Other comments

It is recommended that students take the subject up to date and use the tutorial hours to resolve their doubts.
