General description This course deals with the following aspects of the specification and design of programming languages:				
	* Design Criteria for control structur	res and datat ypes.		
	* Design of object-oriented programming languages.			
* Models for the formal definition of the semantics of programming languages				
	* Formal specification of type systems. Subtyping relations			
	* Computability. Analysis of complexity and its relation to the design of programming languages.			uages.

	Study programme competences
Code	Study programme competences
A39	Capacidade para ter un coñecemento profundo dos principios fundamentais e modelos da computación, e saber aplicalos para
	interpretar, seleccionar, valorar, modelar, e crear novos conceptos, teorías, usos e desenvolvementos tecnolóxicos relacionados coa
	informática.
A40	Capacidade para coñecer os fundamentos teóricos das linguaxes de programación e as técnicas de procesamento léxico, sintáctico e
	semántico asociadas, e saber aplicalas para a creación, o deseño e o procesamento de linguaxes.
B1	Capacidade de resolución de problemas
C2	Dominar a expresión e a comprensión de forma oral e escrita dun idioma estranxeiro.
C6	Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas cos que deben enfrontarse.

Learning outcomes				
Learning outcomes			Study programme	
	competences			
To introduce lambda-calculus, typed and untyped, as the fundamental core of programming languages.	A39	B1	C2	
	A40		C6	
To understand the formal base of typing and subtyping systems	A39	B1	C2	
	A40		C6	
To understand and master the design principles of object-oriented languages and the implications that design choices have on	A39	B1	C6	
the development of programs	A40			
To manage the design principles of the main control structures of programming languages and their implications for program	A39	B1	C6	
development	A40			
To manage the design principles of the main data structures of programming languages and their implications for program	A39	B1	C6	
development	A40			

Contents

Торіс	Sub-topic
Formal definition of type systems	Operational, denotational and axiomatic semantics
	An introduction to lambda-calculus
	Typed lambda-calculus
	Subtyping
Object-Oriented Languages	Fundamental concepts of object-oriented languages
	Type problems in object-oriented languages
Principles of Programming Language Design	Names, scopes and binding
	Control flow
	Data types
	Subroutines
Computability and Complexity	Computability and Lambda calculus
	Complexity classes

Planning				
Methodologies / tests	Competencies	Ordinary class	Student?s personal	Total hours
		hours	work hours	
Laboratory practice	A39 C2 C6	14	42	56
Workshop	B1 C6	7	14	21
Objective test	A40 B1	2	6	8
Guest lecture / keynote speech	A40 C2	21	42	63
Personalized attention		2	0	2

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

	Methodologies
Methodologies	Description
Laboratory practice	Activity that allows students to learn effectively through the realization of practical activities, in this case lab assigments,
	demonstrations and exercises.
Workshop	They are made to complement all other activities, in some cases solved independently by the student and sometimes under
	the supervision of the professor.
Objective test	Test in which the knowledge acquired in the theoretical and practical parts of the subject will be assessed.
Guest lecture /	Oral presentation complemented with the use of audiovisual media and the formulation of questions to/by the students, with
keynote speech	the aim of transmitting knowledge and stimulate critical thinking

	Personalized attention
Methodologies	Description
Workshop	Lectures, problem-solving sessions and practical sessions will be developed in response to student progress in understanding
Laboratory practice	and assimilation of the contents. Overall progress will be made compatible with specific attention to those students who have
	more difficulties in the learning task and with additional support to those that present greater ease and wish to increase their
	knowledge.
	Individual tutoring should not be used to extend the contents with new concepts, but to clarify the concepts already discussed
	in class. The teacher will use them as an interaction that allows him to draw conclusions about the degree of assimilation of
	the subject by students.

Assessment			
Methodologies	Competencies	Description	Qualification
Objective test	A40 B1	Written exam	50
Laboratory practice	A39 C2 C6	Practical assignments	50

Assessment comments

The theoretical part of the course computes 50% of the grade.

The remaining 50% is divided between lab assignments and any other evaluation activities performed throughout the course. If the lab assignments or other activities are carried out in groups, all members of the group will be jointly liable for the work carried out and delivered and its consequences. To pass the course the student must pass each and every one of the sections of the evaluation. For the Second Opportunity, the results of each section on the First Opportunity will be preserved. If the conditions for passing are not met, the final mark will be the minimum between 4.5 and that result from the sum of the sections. In the case of part-time students, failure to attend SGT classes and practices which are duly justified will not be penalized. An student can get bonus points for doing the activities in English (for example, deliver the report of a lab assignment in English, present an exercise in English, etc). In no case he/she will be penalized for performing activities in Spanish and/or Galician.

According to article 14, section 4, of the evaluation regulations, all students who plagiarize the work of others or provide a copy of their work will be marked with FAIL, and therefore a failing grade for the two opportunities.

Recommendations
Subjects that it is recommended to have taken before
Programming Paradigms/614G01014
Theoretical Computer Science/614G01039
Subjects that are recommended to be taken simultaneously
Language Processing/614G01067
Subjects that continue the syllabus
Other comments
- According to the different regulations applicable to university teaching, the gender perspective will be incorporated in this subject (non-sexist
language will be used, the intervention of male and female students in class will be encouraged, etc.) Work will be done to identify and modify sexist

ranguage will be used, the intervention of male and female students in class will be encouraged, etc.).- Work will be done to identify and modify sexis prejudices and attitudes, and the environment will be influenced in order to modify them and promote values of respect and equality.- In case of detecting situations of gender discrimination, actions and measures to correct them will be proposed.
