| Web | | | | | | |
| General description | The subject is divided into theore | etical or lectures | s and practical p | art. The practical part is ta | ught in small group. | |
| | Teaching students on mobility programs will accommodate pedagogical conditions and special guardianship papers, as | | | | | |
| | well as testing and assessment t | ests. | | | | |
| | In the lectures, the descriptive we | ork of the teach | er is dominant. | The students have to parti | cipate in the development of this | |
| | lectures in an active way. This w | ork will be comp | pleted with the r | esolution of different exerc | cises on topics suggested by the | |
| | teacher during practical classes | program. | | | | |
| | For the efficient use and improve | ement of the sub | oject is essentia | l: | | |
| | A) ATTENDANCE: The ongoing | monitoring of b | oth lectures and | practices; so that in orde | r to pass the course, you will | |
| | need achieve a minimum of 80% | of total aid. | | | | |
| | B) WORK SUPERVISED (maxim | num 2 points): 1 | They are divided | into two sections | | |
| | AUTO EXERCISES: You will nee | ed to raise and | resolve student | individually at least 3 year | s of each of the items described | |
| | in the section of the subject content. Delivery format is at the discretion of each teacher. | | | | | |
| | TESTS: individualized and raised | d by the teache | r throughout the | school year without notice | e. These can be both theoretical | |
| | and practical. | | | | | |
| | To apply to the FINAL EXAM it i | s necessary ob | tain at least a 1 | in this section. | | |
| | C) FINAL EXAM (Maximum 8 po | ints): to be held | d at a date deter | mined by the governing bo | odies of the ETSAC. This | |
| | examination will consist of a mult | tiple choice test | [2 points.] And | an objective test [6 points. |], Taking his realization about | |
| | four hours. | | | | | |
| | Simultaneous compliance with pa | aragraphs A) ai | nd B) allow the s | student to review the filing | and obtaining a supplementary | |
| | note to the final exam. In the July | session may s | submit all studer | its enrolled in the subject i | matter or may not have exceeded | |
| | attendance controls. The approve | al is set in five o | out of ten possib | le according to the followi | ng breakdown: multiple choice | |
| | test: 2points, objective test: 6points, supervised work: 2points. | | | | | |

| | Study programme competences / results |
|------|--|
| Code | Study programme competences / results |
| A8 | "Knowledge of the principles of thermodynamics, acoustics and optics adapted and applied to architecture and urbanism " |
| A9 | "Knowledge of of the principles of fluid mechanics, hydraulics, electricity and electromagnetism adapted and applied to architecture and urbanism " |
| A63 | Development, presentation and public review before a university jury of an original academic work individually elaborated and linked to any of the subjects previously studied |

| B1 | Students have demonstrated knowledge and understanding in a field of study that is based on the general secondary education, and is |
|-----|--|
| | usually at a level which, although it is supported by advanced textbooks, includes some aspects that imply knowledge of the forefront of |
| | their field of study |
| B2 | Students can apply their knowledge to their work or vocation in a professional way and have competences that can be displayed by means |
| | of elaborating and sustaining arguments and solving problems in their field of study |
| В3 | Students have the ability to gather and interpret relevant data (usually within their field of study) to inform judgements that include |
| | reflection on relevant social, scientific or ethical issues |
| B4 | Students can communicate information, ideas, problems and solutions to both specialist and non-specialist public |
| B5 | Students have developed those learning skills necessary to undertake further studies with a high level of autonomy |
| B6 | Knowing the history and theories of architecture and the arts, technologies and human sciences related to architecture |
| B10 | Knowing the physical problems, various technologies and function of buildings so as to provide them with internal conditions of comfort |
| | and protection against the climate factors in the context of sustainable development |
| C1 | Expressing themselves correctly, both orally and in writing, in the official languages of the autonomous region |
| C3 | Using basic tools of information technology and communications (ICT) necessary for the exercise of the profession and for lifelong |
| | learning |
| C5 | Understanding the importance of entrepreneurship and knowing the means available to the enterpreneur |
| C6 | Critically evaluate the knowledge, technology and information available to solve the problems they must face |
| C7 | Assuming as professionals and citizens the importance of learning throughout life |
| C8 | Assessing the importance of research, innovation and technological development in the socio-economic advance of society and culture |

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

| | Methodologies |
|--------------------------------|---|
| Methodologies | Description |
| Introductory activities | Presentation on the subject, explaining its operation and objectives. |
| Guest lecture / keynote speech | Classes in which the teacher will present on the Board or of the audiovisual content of theoretical and practical matters |
| Problem solving | In small group class the teacher will present a series of case studies that will solve, partially or totally, with the help and advice of Professor. |
| Objective test | Numerical and graphical issues on the contents of the material and the supporting literature will arise. It will assess the level of learning by the student of practical aspects of the subject |
| Multiple-choice questions | A multiple choice test will assess the level of learning by the student theoretical and practical aspects of the subject. |
| Diagramming | Brief introductions to each topic seek to relate the contents within the knowledge map of the race course in outline mode |
| Glossary | O alumno elabora unha folla resumen con definicións, formulación e unidades físicas relacionadas con cada un dos temas da materia. |
| Supervised projects | Students handed to the teacher at least five unsolved problems of each of the topics of matter, must be made on an individual and personal, will be delivered in paper format A4 manuscript. Serve, along with meeting attendance requirements, have access to additional grade for the course. |
| Workbook | The student selects and analyzes exercise and / or mechanical theory in the literature basic and further identified by teachers in this guide |

| | Personalized attention |
|---------------------|---|
| Methodologies | Description |
| Supervised projects | Is subjected to an exhaustive control assistance and activity of the student. This is to demonstrate the autonomous work with |
| Problem solving | the delivery of a series of fully solved exercises independently, must be at least 3 of each of the topics of matter, will be |
| | delivered on dates determined by the teacher in class. |
| | The tutorial schedule for the realization of personalized attention to the student will be exposed in the notice board of the |
| | subject. |
| | |
| | |

| Assessment | | | |
|---------------------|---------------------|---|---------------|
| Methodologies | Competencies / | Description | Qualification |
| | Results | | |
| Supervised projects | A12 A49 A54 B1 B2 | The student will need to raise and resolve individually and customized exercises at | 20 |
| | B3 B4 B10 B11 B12 | least 3 of the items described in the section of the subject content, the teacher will | |
| | B28 B29 | establish in a timely manner throughout the course along with their deadline . | |
| | | The student will need to exceed individualized testing and control raised by the | |
| | | teacher as long academic year, without notice of the completion thereof. These tests | |
| | | may be both theoretical and practical. | |
| | | It is necessary to get at least 1 point to take examinations. | |
| Multiple-choice | B2 B3 B4 B6 B7 B12 | Accuracy in answering ten questions about theoretical and practical aspects with four | 20 |
| questions | C3 | options, of which unless one is correct is desirable. The conditions of wrong answers | |
| | | will be expressed in the exercise . A minimum of 5 points is established in this test to | |
| | | pass the course. His calculation of the total valuation of the course is two points | |
| | | [2points.] No materials will be allowed of any kind, beyond pens. | |
| Objective test | B2 B3 B4 B6 B11 B12 | Three problems or case studies based on the syllabus and bibliography arise, | 60 |
| | B28 B29 C3 C6 | students give numerical answer to each of them; having even represent the results | |
| | | graphically. The computation of the total of the course is six points [6 points.] | |
| | | The exam is individual, non-compliance with this requirement will result in expulsion | |
| | | and implementing regulations. Mobile phones powered by the examination is strictly | |
| | | prohibited. | |
| | | During the development of theoretical questionnaire no materials of any kind will be | |
| | | allowed beyond pens, while for the realization of the practical part form, calculator and | |
| | | drawing materials will be used. | |
| | | Each exercise will be answered and will qualify in a statement DIN A3. Each exercise | |
| | | will be delivered independently, written in indelible ink on A4 and folded. The result is | |
| | | given in manner that is clearly visible, indicating the numeric value with precision and | |
| | | corresponding units. Invalid parties must be clearly void. The solution sheets and | |
| | | sheet title will be written the name of the student and his group to be edited | |

Assessment comments

For a favorable assessment the student mustcomplete the different parts and attendance to introduce themselves, to aminimum of 80% of the total. The marking criteria are adapted to the reality of professional derivatives. As a general rule misconceptions are valued according to their severity, and maynullify the exercise. Also relevant to the commission of a numerical error, since the practice seeks concrete results. In this regard it is noted that amistake of sign means an error of 200%.

For afavorable assessment the student must complete the different parts and attendance to introduce themselves, to a minimum of 80% of the total. The marking criteria are adapted to the reality of professional derivatives. As a general rule misconceptions are valued according to their severity, and maynullify the exercise. Also relevant to the commission of a numerical error, since the practice seeks concrete results. In this regard it is noted that amistake of sign means an error of 200%. The approved notices a note five out of ten possible. The publication of thenotes will be made within the established time limits. The list of notescontain the date and time of the exam review to be held within the time limitsset out in the Academic Regulations Assessments, Ratings and Complaints. In the July session may submit all students enrolled in the subject even when they have not exceeded attendance controls. The approval is set in five out often possible according to the following breakdown:multiple choice test: 200ints

objectivetest: 6 pointssupervised works: 2 points
