General description	Assessment and analysis of water	r resource systems. Ground	lwater management. Sur	face-water management. Water	
	withdrawals and uses. Methods of analysis: identification, optimization, uncertainties, objectives and control of water				
	management plans. Data manage	ement systems by GIS. Des	ign of water resources sy	stems and planning.	

analyse the working mechanism of the economy and public and private management of water Capacity to analyse the mechanism of the economy working and the public and private management of water Knowledge of the fundamentals about the evaluation of water resources and the principal tools for the hydrological planning, starting theoretical justification and practical applications that lead to the specific problem resolution and the use of updated methodologic (programs and models) for the evaluation of the exploitation, uses, defence, and the management the combined planning of surface a underground water. Knowledge of national and hydrological plans Knowledge of geographical information systems (SIG) applied to the management of water resources. Knowledge of the basic workin the system for the analysis of the geographical data, making use of SIG tools and support management and the analysis of data regal water resources. Knowledge of the geospatial data and his characteristics and the processes for its acquisition, storage treatment analysis, modelling and presentation A18 Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general analysis of water engineering projects in the area of cooperation and development and humanitarian aid. B1 To resolve problems effectively B2 To apply critical thinking, logic and creativity B3 To work individually with initiative B4 To communicate effectively in work surroundings B5 Continuous recycling of knowledge in a general perspective in a global situation of water engineering B6 Understanding of the need to analyse history to understand the present B7 Facility to integrate in multidiscipline teams B8 Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems th		Study programme competences
analyse the working mechanism of the economy and public and private management of water AC Capacity to analyse the mechanism of the economy working and the public and private management of water Knowledge of the fundamentals about the evaluation of water resources and the principal tools for the hydrological planning, starting of the credical justification and practical applications that lead to the specific problem resolution and the use of updated methodologic (programs and models) for the evaluation of the exploitation, uses, defence, and the management the combined planning of surface a underground water. Knowledge of national and hydrological plans A9 Knowledge of geographical information systems (SIG) applied to the management of water resources. Knowledge of the basic workin the system for the analysis of the geospatial data and his characteristics and the processes for its acquisition, storage treatment analysis, modelling and presentation A18 Capacity to realize an integral use and efficient use of water resource. Knowledge of the basin organisms and general analysis of water engineering projects in the area of cooperation and development and humanitarian aid. B1 To resolve problems effectively B2 To apply critical thinking, logic and creativity B3 To work individually with initiative B4 To communicate effectively in work surroundings B5 Continuous recycling of knowledge in a general perspective in a global situation of water engineering B6 Understanding of the need to analyse history to understand the present B7 Facility to integrate in multidiscipline teams B8 Capacity to organize and plan B9 Capacity to organize and plan B9 Capacity to organize and plan B9 Capacity to roganize and plan B9 Capacity to integrate in multidiscipline teams C4 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C5 To value knowledge critically, technology and available information to resolve problems that they will face C6 To value the i	Code	Study programme competences
A6 Capacity to analyse the mechanism of the economy working and the public and private management of water Knowledge of the fundamentals about the evaluation of water resources and the principal tools for the hydrological planning, starting of theoretical justification and practical applications that lead to the specific problem resolution and the use of updated methodologic (programs and models) for the evaluation of the exploitation, uses, defence, and the management the combined planning of surface a underground water. analysis of water engineering projects in the area of cooperation and development and humanitarian aid. B1 To resolve problems effectively B2 To apply critical thinking, logic and creativity B3 To work individually with initiative B4 To communicate effectively in work surroundings B5 Continuous recycling of knowledge in a general perspective in a global situation of water engineering B6 Understanding of the need to analyse history to understand the present B7 Facility to integrate in multidiscipline teams B8 Capacity to organize and plan B9 Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in		analysis, modelling and presentation
B1 To resolve problems effectively B2 To apply critical thinking, logic and creativity B3 To work individually with initiative B4 To communicate effectively in work surroundings B5 Continuous recycling of knowledge in a general perspective in a global situation of water engineering B6 Understanding of the need to analyse history to understand the present B7 Facility to integrate in multidiscipline teams B8 Capacity to organize and plan B9 Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	A18	Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general
To apply critical thinking, logic and creativity To work individually with initiative To communicate effectively in work surroundings Continuous recycling of knowledge in a general perspective in a global situation of water engineering Understanding of the need to analyse history to understand the present Facility to integrate in multidiscipline teams Capacity to organize and plan Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in		analysis of water engineering projects in the area of cooperation and development and humanitarian aid.
To work individually with initiative To communicate effectively in work surroundings Continuous recycling of knowledge in a general perspective in a global situation of water engineering Understanding of the need to analyse history to understand the present Facility to integrate in multidiscipline teams Respective to organize and plan Capacity to organize and plan Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	B1	To resolve problems effectively
To communicate effectively in work surroundings Continuous recycling of knowledge in a general perspective in a global situation of water engineering Understanding of the need to analyse history to understand the present Facility to integrate in multidiscipline teams Capacity to organize and plan Capacity for analysis, synthesis and structure of information and ideas To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people To value knowledge critically, technology and available information to resolve problems that they will face To assume as a professional and citizen the importance of learning throughout life To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	B2	To apply critical thinking, logic and creativity
Continuous recycling of knowledge in a general perspective in a global situation of water engineering Understanding of the need to analyse history to understand the present Facility to integrate in multidiscipline teams Capacity to organize and plan Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	В3	To work individually with initiative
Understanding of the need to analyse history to understand the present Facility to integrate in multidiscipline teams Responsible to organize and plan Capacity to organize and plan Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	B4	To communicate effectively in work surroundings
B7 Facility to integrate in multidiscipline teams B8 Capacity to organize and plan B9 Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	B5	Continuous recycling of knowledge in a general perspective in a global situation of water engineering
B8 Capacity to organize and plan B9 Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	B6	Understanding of the need to analyse history to understand the present
Capacity for analysis, synthesis and structure of information and ideas C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	В7	Facility to integrate in multidiscipline teams
C1 To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	B8	Capacity to organize and plan
C2 To value knowledge critically, technology and available information to resolve problems that they will face C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	В9	Capacity for analysis, synthesis and structure of information and ideas
C3 To assume as a professional and citizen the importance of learning throughout life C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	C1	To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people
C4 To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in	C2	To value knowledge critically, technology and available information to resolve problems that they will face
	C3	To assume as a professional and citizen the importance of learning throughout life
	C4	To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society

C5	To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often
	in the context of investigation
C6	The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known
	within wider contexts (or multidiscipline) related with the study area
C7	The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been
	incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments
C8	The students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and
	not spezialated in a clear and unambiguous way.
C9	The student must possess the learning ability with permits them to continues to study in a manner wich will be in a great measure self
	directed and individual

	Contents
Topic	Sub-topic
Assessment and analysis of water resource systems.	Hydrological resources. Purposes of water resources planning. The hydrological
	watershed. Integrated groundwater and surface water planning. Water withdrawals,
	supplies and uses. Data management and appraisal. Water balances. Flow water
	management and historical restitution.
2. Groundwater management.	Groundwater resources and storages. Recharges and discharges. Groundwater
	balances. Natural and artificial groundwater recharges. Simulation of groundwater as
	related to surface water systems. Calibration and validation of groundwater systems.
3. Surface-water management.	Flow data management and analysis. Deterministic river basin modelling. Synthetic
	streamflow generation. Stochastic river basin planning models. Water for hydroelectric
	generation.
4. Methods of analysis.	Identification and evaluation of water management plans. Control and efficiency of
	water management plans. Water resources planning under uncertainty. Reservoir
	design and operation. Water resources planning objectives and optimization.
5. Hydrological planning.	Design of integrated water resources systems and planning. Mathematical models for
	the development of planning alternatives. Data management systems by GIS. Water
	economy and legislation. Administration of hydrological planning programs.
