General description	Introduction to experimental hydraulics. Scale models. Hydrometry. Continuous of control crosssections. Experimental field					
	techniques. Instrumentation and control of water treatment processes. Tests to obtain design parameters. Know and					
	understand the design and construction of scale models of hydraulic structures. Understand the different techniques of					
	measurements of physical parameters (pressure, temperature, speed, etc). Knowledge and practices with computer					
	systems, electronic devices and hydraulic data acquisition systems (monitoring and control of a river basin, hydraulic					
	experiments).					

Contingency plan	1. Modifications to the contents
	No changes are made
	2. Methodologies
	*Teaching methodologies that are maintained
	The same methodologies are maintained except the evaluation mechanism and the teaching that would change
	face-to-face by telematics through teams software
	*Teaching methodologies that are modified
	The written exam and practical tests are exchanged for telematic assessment tests using Moodle and Teams. This final
	test is necessary to carry out an individualized evaluation of each student.
	3. Mechanisms for personalized attention to students
	Use of Moodle to provide the material to the students. Use of the Moodle forum to communicate all the events of the
	subject (modifications, deliveries of practices, etc.). Synchronous teaching in class time and asynchronous through teams. Tutoring through Team chat and through email.
	4. Modifications in the evaluation
	*Evaluation observations:
	In the case of evaluation mechanisms, with the aforementioned change of the written test, it becomes non-presential
	through tests on the Moodle platform
	5. Modifications to the bibliography or webgraphy
	No changes are made

	Study programme competences
Code	Study programme competences
A13	Knowledge of the experimental technics applied to the water engineering. Capacity to design experiments. Capacity to develop reduced
	models in the laboratory. Capacity to use different types of experimental instrumentation, including flowmeter, depth probes,
	three-dimensional speedometer, limnimeter, windlass.
A14	Knowledge and understanding for design and construction of scale-models of hydraulic structures. Understanding of different technics that
	exist in the measurement of physical conditions (pressure, temperature, speed?) in the field of hydraulic knowledge of computing systems
	and electronic control and the acquisition of hydraulic data (monitoring and control of the river basin, hydraulic circuit, etc)
A20	Use and management of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control process and the
	determination of design parameters for water treatment processes
B1	To resolve problems effectively
B2	To apply critical thinking, logic and creativity
B3	To work individually with initiative
B4	To communicate effectively in work surroundings
B5	Continuous recycling of knowledge in a general perspective in a global situation of water engineering
B6	Understanding of the need to analyse history to understand the present
B7	Facility to integrate in multidiscipline teams
B8	Capacity to organize and plan

B9	Capacity for analysis, synthesis and structure of information and ideas
C1	To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people
C2	To value knowledge critically, technology and available information to resolve problems that they will face
C3	To assume as a professional and citizen the importance of learning throughout life
C4	To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society
C5	To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation
C6	The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area
C7	The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments
C8	The students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and not spezialated in a clear and unambiguous way.
C9	The student must possess the learning ability with permits them to continues to study in a manner wich will be in a great measure self directed and individual

Learning outcomes			
Learning outcomes	Study	y progra	amme
		competences	
Be able to perform tests and experimentation in the field of hydraulics and water quality	AC13	BC1	CC1
	AC14	BC2	CC2
	AC20	BC3	CC3
		BC4	CC4
		BC5	CC5
		BC6	CC6
		BC7	CC7
		BC8	CC8
		BC9	CC9

Contents		
Торіс	Sub-topic	
1. Introduction	1.1 Introduction to testing and experimentation in hydraulics	
2. Continuous of control crosssections	2.1 Experimental field techniques.	
3. Hydrometry. Techniques for measuring and recording water	3.1 Instrumentation Systems (sensors, actuators)	
parameters (level, flow, speed, etc).	3.2 Control Modules (PLCs, data acquisition)	
	3.3 Data Transmission Systems	

	Planning			
Methodologies / tests	Competencies	Ordinary class	Student?s personal	Total hours
		hours	work hours

Seminar	A13 A14 A20 B1 B2	15	15	30
	B3 B5			

Personalized attention		30	0	30
(*)The information in the planning table is for guidance only and does not take into account the beterogeneity of the students				

Methodologies		
Methodologies	Description	
Guest lecture /	Regular lectures where the main theoretical contents of the subjects are regarded	
keynote speech		
Laboratory practice	Practical experiments related to the theoretical aspects regarded at the magistral lectures	
Objective test	Final Exam	
Seminar	Personalized attention to be provided for the semminars	
	It may be through TEAMS software program	

Personalized attention			
Methodologies	Description		
Guest lecture /	Personalized attention to be provided for the semminars		
keynote speech			
Objective test			
Seminar			
Laboratory practice			

		Assessment	
Methodologies	Competencies	Description	Qualification
Guest lecture /	A14 B1 B2 B4 B5 B6	Attendance	10
keynote speech	B8 B9 C1 C2 C3 C4		
	C5 C6 C7 C8 C9		
Objective test	A13 A14 B1 B2 B5 B6	The knowledge of the concepts developed at the magistral lectures will be assesed	30
	B9	and considered for the final mark	
Seminar	A13 A14 A20 B1 B2	Optional	10
	B3 B5		
Laboratory practice	A13 A14 A20 B1 B2	The attendance to the seminars and the work developed will be considered for the	50
	B3 B4 B7 B8 B9 C2	final mark
