General description	Wastewater treatment has becom	ne a fundamental	tool in water mar	nagement. Indeed, the	e ultimate aim of the Water
	Framework Directive (2000/60/EC	c) is to achieve th	ne elimination of h	azardous substances	and contribute to achieving
	concentrations near background	values for natural	lly occurring subs	tances in both freshw	ater and marine ecosystems. The
	main purpose of this subject is to	help students ide	entify and evaluate	e risk factors and prod	cesses involved in water pollution
	main purpose of this subject is to help students identify and evaluate risk factors and processes involved in water and water treatment.				
	and water treatment.

	Children was was a compared as a		
	Study programme competences		
Code	Study programme competences		
A19	Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and		
	regeneration treatments		
A23	Fundamental knowledge of energy consumption and its environmental implications inside a development sustainable		

A25	Knowledge and understanding of water in different situations: the working of ecosystems, environmental factors with the purpose of to
	make an inventory of medium, applying the methodology to value the impact and its use in studies and evaluations of the environmental
	impact.
B1	To resolve problems effectively
B2	To apply critical thinking, logic and creativity
В3	To work individually with initiative
B4	To communicate effectively in work surroundings
B5	Continuous recycling of knowledge in a general perspective in a global situation of water engineering
В6	Understanding of the need to analyse history to understand the present
B7	Facility to integrate in multidiscipline teams
B8	Capacity to organize and plan
В9	Capacity for analysis, synthesis and structure of information and ideas
C1	To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people
C2	To value knowledge critically, technology and available information to resolve problems that they will face
C3	To assume as a professional and citizen the importance of learning throughout life
C4	To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in
	society
C5	To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often
	in the context of investigation
C6	The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known
	within wider contexts (or multidiscipline) related with the study area
C7	The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been
	incomplete or limited, include reflexions about social responsabilities and ethics related to the application of the knowledge and judments
C8	The students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and
	not spezialated in a clear and unambiguous way.
C9	The student must possess the learning ability with permits them to continues to study in a manner wich will be in a great measure self
	directed and individual

Learning outcomes			
Learning outcomes	Study	progra	ımme
	cor	npeten	ces
The learning outcomes address water treatment and how it influences the normal functioning of freshwater ecosystems.	AC19	BC1	CC1
	AC23	BC2	CC2
	AC25	BC3	CC3
		BC4	CC4
		BC5	CC5
		BC6	CC6
		BC7	CC7
		BC8	CC8
		BC9	CC9

Contents			
Topic	Sub-topic		
Water, energy and sustainable development. Life cycle	Water demand		
analysis	Water footprint and carbon footprint		
	Greenhouse gases emission		
Water reuse as an example of sustainable initiative	Water reuse options		
	Treatment options and their energy requirements		
	Life cycle analysis of water reuse		

Renewable energies to face water scarcity	The problem of the water and the energy
Ç	Technologies based on renewable energies for freshwater production
Water and energy: two closely-related concepts	Introduction
,	The use of energy to obtain the required water
	Energy obtained from water
	The use of water to obtain energy
The functioning of freshwater ecosystems	Lentic systems
	Lotic systems
Freshwater biodiversity. Types of aquatic organisms	Microbes and plants
The second of th	Animals
Effects of pollutants on aquatic ecosystems	Suborganismal effects
and the political of a quality coccycles.	Supraorganismal effects
The use of bioindicators to assess freshwater quality	Bioindicators recommended by the Water Framework Directive
Chemical contaminants of water	Types
	Standards
	Problems
	Health Effects and Impact on the environment
Chemical treatments	Coagulation-precipitation
	Oxidation reduction
	Ion exchange
	Disinfection
	High-service pumping
	Water plant residuals managment
Types of water contamination	Domestic wastewater
,	Livestock Wastewater
	Industrial wastewater
	Municipal waste water
	Agricultural pollution
	Water from urban runoff
Analytical methods for the determination of physicochemical	Analytical methods
parameters	

	Planning			
Methodologies / tests	Competencies	Ordinary class	Student?s personal	Total hours
		hours	work hours	
Guest lecture / keynote speech	A19 A23 A25 B5 B6	25	25	50
	B7 B9 C2 C3			
Laboratory practice	A19 A25 B1 B2 B3 B4	25	25	50
	B7 B8 B9 C2 C3 C4			
	C5 C6 C9			
Workshop	A19 A23 B2 B4 B5 B6	10	10	20
	B7 B8 B9 C1 C2 C3			
	C4 C5 C6 C7 C8			
Personalized attention		30	0	30

Methodologies				
Methodologies	Methodologies Description			
Guest lecture /	Regular lectures where the main theoretical contents of the subject are regarded			
keynote speech				

Laboratory practice	The laboratory practice will be done mainly in the chemistry laboratory. Practices will illustrate chemical concepts and the		
	students wil learn important laboratory techniques		
Workshop	During the workshop discussions will be organised and the students will be asked toproduce assays or reports in different		
	formats		

Personalized attention				
Methodologies	Methodologies Description			
Laboratory practice	aboratory practice Personalized attention to be provided mainly for laboratory practices and workshops			
Workshop				

Assessment			
Methodologies	Competencies	Description	Qualification
Laboratory practice	A19 A25 B1 B2 B3 B4	Assesment will be based mostly on claass assignments. Attendance to laboratory	40
	B7 B8 B9 C2 C3 C4	classes and technical visits will be taken into account for the final mark	
	C5 C6 C9		
Workshop	A19 A23 B2 B4 B5 B6	Attendance to preparatory seminars and the work developed in the workshops will be	20
	B7 B8 B9 C1 C2 C3	considered for the final mark	
	C4 C5 C6 C7 C8		
Guest lecture /	A19 A23 A25 B5 B6	The knowledge of the concepts developed at the magistral lectures will be assesed	40
keynote speech	B7 B9 C2 C3	and considered for the final mark. Assessment methodologies might include oral	
		presentations, written exams, analysis of scientific papers, etc.
