

Teaching Guide

Teaching Guide				
Identifying Data				2021/22
Subject (*)	Internships		Code	632844215
Study programme	Mestrado Universitario en Enxeñaría da Auga (plan 2012)			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	Second	Obligatory	15
Language	English			
Teaching method	Face-to-face			
Prerequisites				
Department	Enxeñaría CivilMatemáticas			
Coordinador	Vázquez González, Ana María	E-mail	ana.maria.vazquez@udc.es	
Lecturers	Alvarez Garcia, Julia	E-mail	julia.alvarez.garcia@udc.es	
	Vázquez González, Ana María		ana.maria.vazquez@udc.es	
Web	caminos.udc.es/hosting/masteragua/			
General description	Students will choose, between different institutions, national or international, where they will study the university practicum The time period to course this subject will be bewtween 10 weeks and 6 months. The journey will be full time			
Contingency plan	General information: In each case the instructions will be given to follow, depending on the country, city or company in which the student is performing the internships 1. Modifications to the contents 2. Methodologies *Teaching methodologies that are maintained *Teaching methodologies that are modified 3. Mechanisms for personalized attention to students 4. Modifications in the evaluation *Evaluation observations: 5. Modifications to the bibliography or webgraphy			

Study programme competences

Code	Study programme competences
A1	Knowledge, understanding and capacity to apply legislation related with water engineering during professional development. Capacity to analyse the working mechanism of the economy and public and private management of water
A2	Capacity to resolve basic physical problems of water engineering and theoretic and practical Knowledge of the chemistry, physics, mechanics and technologic properties of the water
A3	Capacity to apply the mechanics of the fluids and the fundamental flow equations in calculate for conductions at pressure and in free layer
A4	Capacity to apply the hydrology knowledge and the principles of flow mechanics in the method of calculations about hydrology as well as surface and underground. Capacity to make the evaluation of the hydraulic resources and apply the principal tools to do the hydrologic planning and the regulation and lamination of the inputs Capacity to analyse the river hydraulics and to apply the knowledge acquired in the restauration of the river direction and other works about rivers and their surroundings

A5	Knowledge of the basic concepts about ecology applied to water engineering. Capacity to act in the respectful way and enriching way about the environment contribution to the sustainable development. Capacity to analyse the ecological quality of water. Knowledge of the basic principles of the ecology and basic understanding of the working continental water systems
A7	Knowledge of the fundamentals about the evaluation of water resources and the principal tools for the hydrological planning, starting from theoretical justification and practical applications that lead to the specific problem resolution and the use of updated methodologic (programs and models) for the evaluation of the exploitation, uses, defence, and the management the combined planning of surface and underground water. Knowledge of national and hydrological plans
A8	Capacity to calculate and manage of extreme avenues
A9	Knowledge of geographical information systems (SIG) applied to the management of water resources. Knowledge of the basic working of the system for the analysis of the geographical data, making use of SIG tools and support management and the analysis of data regarding water resources. Knowledge of the geospatial data and his characteristics and the processes for its acquisition, storage treatment analysis, modelling and presentation
A10	Understanding of the fundamentals of dynamic fluid computation (CFD). Capacity to elaborate codes that can resolve non-understandable flow on the surface as well as in the porous media
A11	Knowledge of numerical models applied to hydraulic engineering. Capacity to use and analyse the results of the hydraulic models. Capacity to design, develop and analyse numerical schemes used in a hydraulic models
A12	Capacity to use commercial numerical models for flux in free layer, flow pressure, drainage, hydrologic calculations for avenues, sediment transport in rivers and costal zones, transport of contaminants and wave propagation
A13	Knowledge of the experimental technics applied to the water engineering. Capacity to design experiments. Capacity to develop reduced models in the laboratory. Capacity to use different types of experimental instrumentation, including flowmeter, depth probes, three-dimensional speedometer, limnimeter, windlass..
A14	Knowledge and understanding for design and construction of scale-models of hydraulic structures. Understanding of different technics that exist in the measurement of physical conditions (pressure, temperature, speed?) in the field of hydraulic knowledge of computing systems and electronic control and the acquisition of hydraulic data (monitoring and control of the river basin, hydraulic circuit, etc)
A15	General vision and balanced of the basic aspects and application of underground hydrologic from the needs of civil engineering. Capacity to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the constructive aspects of the water uptake
A16	Knowledge of the chemical basis of water which totally condition its behaviour in nature and its uses. Understanding and knowledge of the different water regulations for quality at local, national and European level
A17	A global vision of water supply by the distinct elements which form it, at the same time having the necessary knowledge for its basis dimensioning and technological aspects related to its management and constructive implementation
A18	Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general analysis of water engineering projects in the area of cooperation and development and humanitarian aid.
A19	Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and regeneration treatments
A20	Use and management of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control process and the determination of design parameters for water treatment processes
A21	Knowledge of water quality control models. Capacity to analyse and propose solutions to problems in water quality control
A22	Capacity to plan, to Project, to measure and to direct the constructions and exploitation of water conducts, reservoirs, hydroelectric installations, river regulations systems, water channels, river works, and other hydrologic and hydraulics Works
A23	Fundamental knowledge of energy consumption and its environmental implications inside a development sustainable
A24	Capacity to design and manage the water supply and treatment in a population area, including design and Project for solutions regarding water treatment, drainage, and advanced management of residual waters in the city. Knowledge regarding advanced processes for the water treatment, elimination of nutrients, and management strategy in times of rainwater
A25	Knowledge and understanding of water in different situations: the working of ecosystems, environmental factors with the purpose of to make an inventory of medium, applying the methodology to value the impact and its use in studies and evaluations of the environmental impact.
B1	To resolve problems effectively
B2	To apply critical thinking, logic and creativity
B3	To work individually with initiative

B4	To communicate effectively in work surroundings
B5	Continuous recycling of knowledge in a general perspective in a global situation of water engineering
B6	Understanding of the need to analyse history to understand the present
B7	Facility to integrate in multidiscipline teams
B8	Capacity to organize and plan
B9	Capacity for analysis, synthesis and structure of information and ideas
C1	To understand the importance of the enterprising culture and to know the means at the reach of the enterprising people
C2	To value knowledge critically, technology and available information to resolve problems that they will face
C3	To assume as a professional and citizen the importance of learning throughout life
C4	To value the importance of the investigation, innovation and technology development in the social ?economic advance and cultural in society
C5	To posses and understand knowledge that gives a base or oportunity to be original in the development and for applications of ideas, often in the context of investigation
C6	The students must be able to apply the acquired knowledge and their capacity to resolve problems in new surrandings or not well known within wider contexts (or multidiscipline) related with the study area
C7	The students must be able to integrate knowledge and to affront the complexity to formulate judgements from information that, been incomplete or limited, include reflexions about social responsibilities and ethics related to the application of the knowledge and judgments
C8	The students must be able to comunicate their conclusions, knowledge and the last reasons that support them, to spezialated publics and not spezialated in a clear and unambiguous way.
C9	The student must possess the learning ability with permits them to continues to study in a manner wich will be in a great measure self directed and individual

Contents	
Topic	Sub-topic
Internships in companies and research institutions in Spain, Germany and abroad	No subtopics
The practice in the company will impose a development of the professional exercise in the different areas related with water engineering, in one of the companies where there is a collaboration agreement signed by the participating universities. The company training can be developed in companies and institutions joined with the universities of A Coruña and Magdeburgo or another universities wich have collaboration agreement. The assignment of the destinations will take into account the students priority and in the case of the conflict it will follow the academic criteria strictly. A tutor will be designed in the receiving university so that he can supervise the training at the end of wich he will create a report about the work carried out, having to value the character of the work. The duration of the practice will be between 2 and 6 months wich can be extended by agreement between both parts. In the same way, the development of this work will also be admitted in the instalations of the participating universities, collaborating in investigation projects in the different areas implicated. This will constitute the training period. The contractual relationship will be paid preferably in any case.	There are no subtopics
