| General description | The concepts learned in the developed master are developed in project | | | | |

| | Study programme competences |
|------|---|
| Code | Study programme competences |
| A1 | Knowledge, understanding and capacity to apply legislation related with water engineering during professional development. Capacity to |
| | analyse the working mechanism of the economy and public and private management of water |
| A2 | Capacity to resolve basic physical problems of water engineering and theoretic and practical Knowledge of the chemistry, physics, |
| | mechanics and technologic properties of the water |
| А3 | Capacity to apply the mechanics of the fluids and the fundamental flow equations in calculate for conductions at pressure and in free layer |
| A4 | Capacity to apply the hydrology knowledge and the principles of flow mechanics in the method of calculations about hydrology as well as |
| | surface and underground. Capacity to make the evaluation of the hydraulic resources and apply the principal tools to do the hydrologic |
| | planning and the regulation and lamination of the inputs Capacity to analyse the river hydraulics and to apply the knowledge acquired in |
| | the restauration of the river direction and other works about rivers and their surroundings |
| A5 | Knowledge of the basic concepts about ecology applied to water engineering. Capacity to act in the respectful way and enriching way |
| | about the environment contribution to the sustainable development. Capacity to analyse the ecological quality of water. Knowledge of the |
| | basic principles of the ecology and basic understanding of the working continental water systems |
| A6 | Capacity to analyse the mechanism of the economy working and the public and private management of water |
| A7 | Knowledge of the fundamentals about the evaluation of water resources and the principal tools for the hydrological planning, starting from |
| | theoretical justification and practical applications that lead to the specific problem resolution and the use of updated methodologic |
| | (programs and models) for the evaluation of the exploitation, uses, defence, and the management the combined planning of surface and |
| | underground water. Knowledge of national and hydrological plans |
| A8 | Capacity to calculate and manage of extreme avenues |
| A9 | Knowledge of geographical information systems (SIG) applied to the management of water resources. Knowledge of the basic working of |
| | the system for the analysis of the geographical data, making use of SIG tools and support management and the analysis of data regarding |
| | water resources. Knowledge of the geospatial data and his characteristics and the processes for its acquisition, storage treatment |
| | analysis, modelling and presentation |
| A10 | Understanding of the fundaments of dynamic fluid computation (CFD). Capacity to elaborate codes that can resolve non-understandable |
| | flow on the surface as well as in the porous media |
| A11 | Knowledge of numerical models applied to hydraulic engineering. Capacity to use and analyse the results of the hydraulic models. |
| | Capacity to design, develop and analyse numerical schemes used in a hydraulic models |
| A12 | Capacity to use commercial numerical models for flux in free layer, flow pressure, drainage, hydrologic calculations for avenues, sediment |
| | transport in rivers and costal zones, transport of contaminants and wave propagation |

| A13 Knowledge of the experimental technics applied to the water engineering. Capacity to design experiments. Capacity to develop reduced models in the laboratory. Capacity to a design and construction of scale-models of hydraulic structures. Understanding of different technics that was in the measurement of physical conditions (pressure, superature, speed?) in the field of hydraulic knowledge of demonstration of hydraulic data (monitoring and control of the river basin. hydraulic circuit, etc). A15 General vision and balanced of the basic aspects and application of underground hydrologic from the needs of civil engineering. Capacity to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the constructive aspects of the water uptake. A16 Knowledge of the visite public is a part of the visite without totally condition its behaviour in nature and its uses. Understanding and knowledge of the different water regulations for quality at local, national and European level A17 A global vision of water supply by the distinct elements which form it, at the same time having the necessary knowledge for its basis dimensioning and technological sepacets related to its management and constructive implementation. A18 Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general analysis of water engineering projects in the area of cooperation and development and humanistann aid. A19 Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and regeneration treatments of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control process and the determination of design parameters for water treatment processes. A21 Knowledge of advanced management of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control processes for the water treatment, dr | | |
|--|-----|---|
| three-dimensional speedometer, limnimeter, windiass. A14 Knowledge and understanding of design and construction of scale-models of hydraulic structures. Understanding of different technics that exist in the measurement of physical conditions (pressure, temperature, speed?) in the field of hydraulic knowledge of computing systems and electronic control and the acquisition of hydraulic data (monitoring and control of the niver basin, hydraulic circuit, etc.) A15 General vision and balanced of the basic aspects and application of underground hydrologic from the needs of civil engineering. Capacity to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the constructive aspects of the water uplake A16 Knowledge of the chemical basis of water which totally condition its behaviour in nature and its uses. Understanding and knowledge of the different water regulations for qualify at local, national and European level A17 A global vision of water supply by the distinct elements which form it, at the same time having the necessary knowledge for its basis dimensioning and technological aspects related to its management and constructive implementation A18 Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general analysis of water engineering projects in the area of cooperation and development and humanitarian aid. A19 Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and regeneration treatments A20 Use and management of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control process and the determination of design parameters for water treatment processes A21 Knowledge of water quality control models. Capacity to analyse and propose solutions to problems in water quality; control models. Capacity to analyse into the control process and provided provided prop | A13 | |
| A14 Knowledge and understanding for design and construction of scale-models of hydraulic structures. Understanding of different technics that exist in the measurement of physical conditions (pressure, temperature, speed?) in the field of hydraulic knowledge of computing systems and electronic control and the acquisition of hydraulic dark (monitoring and control of the five basin, hydraulic circuit, etc) A15 General vision and balanced of the basic aspects and application of underground hydrologic from the needs of civil engineering. Capacity to Project or interpret thydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the constructive aspects of the water uptake. A16 Knowledge of the chemical basis of water which totally condition its behaviour in nature and its uses. Understanding and knowledge of the different water repulations for quality at local, national and European level A17 A global vision of water supply by the distinct elements which form it, at the same time having the necessary knowledge for its basis dimensioning and technological aspects related to its management and constructive implementation A18 Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general analysis of water engineering projects in the area of cooperation and development and humanitarian aid. A19 Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and regeneration treatments A20 Use and management of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control process and the determination of design parameters for water treatment processes A21 Knowledge of water quality control models. Capacity to analyse and propose solutions to problems in water quality control models. Capacity to plan, to Project, to measure and to direct the constructions and exploitation of water conducts, reservoirs, hydroclustic visit | | models in the laboratory. Capacity to use different types of experimental instrumentation, including flowmeter, depth probes, |
| exist in the measurement of physical conditions (pressure, temperature, speed?) in the field of hydraulic knowledge of computing systems and electronic control and the acquisition of hydraulic data (monitoring and control of the river basin, hydraulic circuit, etc) A15 General vision and belanced of the basic sapects and application of underground hydrologic from the needs of civil engineering. Capacity to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the constructive aspects of the water uptake A16 Konvidege of the chemical basis of water which totally condition its behaviour in nature and its uses. Understanding and knowledge of the different water regulations for quelity at local, national and European level A17 A global vision of water supply by the distinct elements which form it, at the same time having the necessary knowledge for its basis dimensioning and technological aspects related to its management and constructive implementation A18 Capacity to realize an integral use and efficient use of water resource. Knowledge of the working of the basin organisms and general analysis of water engineering projects in the area of cooperation and development and humanitarian aid. A19 Knowledge of advanced water treatment with different conclusions: depuration, re-use, purification, elimination of nutrients and regeneration treatments. A20 Use and management of measuring equipment in the field and in the laboratory. Knowledge of the methodology of control process and the determination of design parameters for water treatment processes A21 Knowledge of water quality control models. Capacity to analyse and propose solutions to problems in water quality control models. Capacity to feel, to project, to measure and to direct the constructions and exploitation of water conducts, reservoirs, hydroelectric installations, river regulations, river regulations, systems, water channels, nev rowns, and other hydrologic and hydraulicis Works | | three-dimensional speedometer, limnimeter, windlass |
| and electronic control and the acquisition of hydraulic data (monitoring and control of the river basin, hydraulic circuit, etc.) General vision and balanced of the basic sepects and application of underground hydrologic from the needs of civil engineering. Capacity to Project or interpret the different hydraulic trials of hydrodynamic characterization, interpret hydrogeological maps and know the constructive aspects of the water uptake Ario Knowledge of the chemical basis of water which totally condition its behaviour in nature and its uses. |----------|---------------------|
| Topic | Sub-topic Sub-topic |

The students should write a final master work as an obligatory There are no subtopics requirement to obtain the tittle of Master in Water Engineering.

In order to do so, the coordinator of the host university will appoint a tutor being an expert on the subjects that students might choose as the object of their dissertations. The purpose of the dissertation is a research/practical work in any field related to Water Engineering. The dissertation can be developed at the Universities of A Coruña, Magdeburg or other universities with which they have bilateral agreements.

members, to be established at the host university. There will be a normalized format for all the students that will be ajusted to this. The students will have to give a copy to each memeber of the tribunal at least, one week before the presentation.

Upon completion of the work, the tutor will receive a report which will be assessed by a examination board with three

The language in wich it is written and presented will be in english
