General description	Provide the student, through an introductory course, with theoretical and methodological knowledge in anthropology of disability, dependency and health, for the qualitative empirical understanding and analysis of the sociocultural aspects of disability and of illness and health, as life experiences and as Phenomena and conditions with an essential moral and symbolic dimension.			

Contingency plan	<p>1. Modifications in the contents:</p> <p>No changes will be made to the contents</p> <p>2. Methodologies</p> <p>* Teaching methodologies that are maintained</p> <ul style="list-style-type: none">- Tutored work (computed in the evaluation)-Master session-Objective test (computed in the evaluation of students with recognition of part-time dedication)-Directed discussion (computed in the evaluation)-Recension bibliography (computed in the evaluation) <p>* Teaching methodologies that are modified: There is no methodology that is modified; but the A1 competition is also covered by the 'lecture session', and the C4 by 'Readings'. Likewise, the 'Personalized attention' is extended to all methodologies, with the exception of the 'Master Session'.</p> <p>3. Mechanisms for personalized attention to students:</p> <ul style="list-style-type: none">-Email: daily employment, both for communication with students and -eventually, and as a second option after Moodle- for the rapid sending of digital documents with the papers of the different competences.-Moodle: with periodicity given according to the communication needs between teacher and students, it will be used to make consultations through the 'forum', and mainly to serve in digital files materials for the different methodologies in 'tasks', and news through the forum.-Teams: tool reserved for conducting lectures and associated comments, between teacher and students in a situation of forced non-attendance by contingency measures. <p>4. Modifications in the evaluation: Both for face-to-face students and for students with recognition of part-time dedication, the respective criteria for the distribution of percentages corresponding to the different methodologies are maintained. Specifically, the face-to-face tests should not take the objective test, so that the 20% that it computes is distributed among the other methodologies that do count for evaluation; while those of part-time dedication must take the objective test and be computed the 20% differentiated. However, in non-attendance conditions due to a contingency plan, the attendance count of the face-to-face students will be estimated until the moment of confinement, so that the test will continue without being mandatory for those who had attended at least 2/3 of effective face-to-face sessions up to that point, and continue to attend the virtual master sessions through Teams.</p> <p>* Assessment observations:</p> <p>The requirements to pass the subject under conditions regulated by the contingency plan, will consist of:</p> <ul style="list-style-type: none">-Deliver the works associated with the different methodologies (supervised work, reading and bibliographic review) in the manner and deadlines indicated.-The face-to-face students, attend at least 2/3 of the lectures actually given, and follow up on those eventually given by Teams-For part-time students, in addition, take the objective test.- Obtain in any of the cases a global score -estimated considering the different percentages of the different methodologies- equal to or greater than 5-The requirements for the 2nd opportunity call will consist of delivering and / or redoing the works and / or tests that were suspended or not presented in the first call. <p>5. Modifications to the bibliography or webgraphy</p> <p>There are no modifications to the bibliography, taking into account that all the materials in the form of articles will be provided to the students, by system, via Moodle.</p>
-------------------------	---

Code	Study programme competences / results
A1	CE1. Ser capaz de integrar o fenómeno da discapacidade e a dependencia dentro da construción social do proceso saúde-enfermidade
A4	CE4. Capacidade para a análise da influencia das achegas sociais e científicas das ciencias socio-sanitarios sobre a discapacidade e a dependencia no sistema xurídico
B1	CB6. Posuír e comprender coñecementos que acheguen unha base ou oportunidade de ser orixinais no desenvolvemento e/ou aplicación de ideas, a miúdo nun contexto de investigación
B2	CB7. Que os estudantes saiban aplicar os coñecementos adquiridos e a súa capacidade de resolución de problemas en ámbitos novos ou pouco coñecidos dentro de contextos máis amplos (ou multidisciplinares) relacionados coa súa área de estudo
B3	CB8. Que os estudantes sexan capaces de integrar coñecementos e enfrontarse á complexidade de formular xuízos a partir dunha información que, sendo incompleta ou limitada, inclúa reflexións sobre as responsabilidades sociais e éticas vinculadas á aplicación dos seus coñecementos e xuízos
B7	CG2 Identificar, avaliar e resolver os problemas derivados da presenza de discapacidade e dependencia
B9	CG4 Ser capaz de intervir na problemática derivada da discapacidade e da dependencia
C1	CT1. Ser capaz de relacionarse de forma eficiente con e dentro do equipo multidisciplinar, intradisciplinar e transdisciplinar.
C4	CT4. Desenvolverse para o exercicio dunha cidadanía aberta, culta, crítica, comprometida, democrática e solidaria, capaz de analizar a realidade, diagnosticar problemas, formular e implantar solucións baseadas no coñecemento e orientadas ao ben común
C6	CT6. Valorar criticamente o coñecemento, a tecnoloxía e a información dispoñible para resolver os problemas aos que deben enfrontarse

Learning outcomes			
Learning outcomes		Study programme competences / results	
Understand the relevance of social and cultural anthropology within the health-disease and normality paradigms, faced by the human being. Recognize the anthropological roots on which any therapeutic system is built and representations of disability and dependence-		AR1 AR4	BR1 BR3 BR7
Understand the methodology of study of this discipline and execute some technique of collecting anthropological information.		AR1	BR2 BR3 CR1
Integrate the importance of symbols, representations, values and behaviors that occur in different cultures around health, disease, disability and dependence			BR9 CR4 CR6

Contents	
Topic	Sub-topic
Unit 1. The social and cultural anthropology as a discipline.	What is Anthropology; What is its object and method.
Unit 2. The research methods and techniques in Social and Cultural Anthropology.	Fieldwork, participant observation, action research, the interview ethnographic, the history of life, the genealogical method.
Topic 3 Relativism and cultural diversity. The cultural concept of normality.	Cultures as symbolic systems of representations, values and behaviors. The interpretation of the specific knowledge, values and local practices in Anthropology.
Theme 4º Anthropology of health. Disciplinary history.	The anthropological perspective of disease and healing; The illness; The healing
Topic 5º Medical anthropology and ethnomedicine.	Cultural premises of biomedicine; The field of biomedicine and its compartmentalization in specialties; Values and practice in biomedicine;
Topic 6 º Cultural trends and choice in medicine and health.	The social construction of the doctor, the patient and the diagnostic-therapeutic process.
Topic 7º. The universe of illness, disability and dependence.	Deficiency, disability and handicap. The dependence
Topic 8º. Illness and healing Three theories	Cultural approach. Ecological approach. Socio-political approach

Topic 9º. Disability: The role of society and culture.	Perception as an interpretation The view in the west; conclusio
Topic 10th. Applied anthropology in disability	The critique of the cultural assumptions of disability. From disability to functional diversity

Methodologies	
Methodologies	Description
Supervised projects	<p>The student will select, to carry out his supervised work, one of the following thematic options:</p> <ol style="list-style-type: none"> 1. Perception, classification and emic experience of disability, and its specific sociocultural conditioning factors. The specific conflict and negotiation process involves specialists and disabled people. 2. Models, response and alternatives in the sociocultural construction of the categories disease / cure / health, or disability / treatment / integration, and of the specialist / patient or specialist / disabled roles. <p>The methodology will consist of a small study of the chosen topic, from the student's own professional, healthcare or training experience, supported by the empirical description of some cases associated with one of the aforementioned topics, and developing an interpretation that takes into account social processes and cultural that operate around this phenomenon of disability. Due to the characteristics of the course, the object and objective of the study will be very specific, and the scope of the analysis limited.</p> <p>The blended students will receive information and tutoring regarding the preparation of the work, either by online means (email, news in Moodle), or on the occasion of one of the two face-to-face meetings to which they will be called during the semester.</p> <p>In circumstances of general non-attendance due to the pandemic, for their work, the student will be able to carry out the empirical survey of real cases with online tools, or replace them with the design sketch of an empirical survey based on semi-structured interviews or life history.</p> <p>Both in classroom and non-classroom conditions, the work will be prepared and delivered in digital document, in Word or PDF format, sent as a 'task' in Moodle or via email. The delivery will take place at the end of the course (December).</p>

Objective test	<p>It will consist of the conduct of a thematic examination through questions with short answers, the day and time marked for this purpose by the organization of the master, and with a maximum hour of duration of the test.</p> <p>Under conditions of face-to-face normality, the conduct of this examination will be mandatory for semi-presence students and/or for students who do not attend at least 2/3 of the master sessions (under face-to-face conditions).</p> <p>Under non-in-person conditions per contingency plan, the attendance count of face-to-face students will be estimated until the time of confinement, so that the test will remain unused for those who have attended at least 2/3 of the effective face-to-face sessions up to that point, and continue to attend virtual master sessions through Teams.</p> <p>The objective test will be carried out in person on the day of the official call.</p> <p>The materials for the preparation of the test will be provided by the teacher, as the topics of the program are taught, in the form of summaries of what was given in the master sessions, sent as documents in Word or in Power point through the Moodle platform. The objective test will be done in person on the day of the official call.</p> <p>The materials for the preparation of the test will be provided by the teacher, as the topics of the program are taught, in the form of summaries of what was taught in the master sessions, sent as documents in Word or in Power point through the Moodle platform.</p>
Guest lecture / keynote speech	<p>Presentation in class by the teacher, relying on power-point projected diagrams, of the subject matter of each of the ten program topics. Clarifications and dialogue on controversial or particularly interesting aspects of the subject presented.</p> <p>In the non-attendance contingency due to the pandemic, the master sessions will be taught through conferences on the Teams platform, convened during the time slot assigned to the subject in the weekly schedule, and will be accompanied by sending the students, via Moodle. , from the summary of the corresponding topic, at the end of the virtual teaching of the same</p>
Workbook	<p>In the case of face-to-face students, reading, summary, presentation in weekly sessions -each assigned to 1-2 students-, and open debate in class of a total of 15-20 readings referring to topics of anthropology of disability and dependency .</p> <p>In the case of blended students, the text reading about health, disability or dependency, instead of being the subject of oral presentation in class, will be delivered in writing for evaluation in the form of a digital document with a summary and evaluation of the article that be assigned personally, of a maximum of 8 pages in length, and that also includes the conceptual maps that reflect the theoretical-argumental and ethnographic treatment of the content.</p> <p>In a situation of general non-attendance arising from the measures against the pandemic, the 'readings', instead of being the subject of exposition in class, will be summarized, valued and provided with concept maps, carried out in writing in digital format, and delivered via Moodle or email in the week and day of the semester that each student had assigned his presentation in class (distribution that is made at the beginning of the course)</p>
Critical bibliographical	<p>Brief critical comments on the following readings:</p> <p>1st Langdon & Wiik (2010) "Anthropology, health and disease: an introduction to the concept of culture applied to health sciences ". Enfermagem, 18</p> <p>2º Guerrero, Joaquín (2011) "Humanizing disability. From ethnography to commitment in sociocultural research on intellectual disability". Experimental Anthropology Magazine, 11</p> <p>3º Velarde, Valentina (2012) "The models of disability: a historical journey" Enterprise and Humanism Magazine, 1</p> <p>The three texts for the preparation of the reviews will be provided in digital format and sent to all the students (face-to-face and blended) through the Moodle forum, so that each student submits a review of each text at the beginning of each month, sending it in Word or PDF format through the same channel (Moodle forum).</p> <p>The same procedure will be followed in case of entering general conditions of non-attendance.</p>

Personalized attention

Methodologies	Description
---------------	-------------

Critical bibliographical Supervised projects Objective test Workbook	<p>The personalized attention will consist of the orientation and follow-up, through tutoring, of both the preparation of the supervised course work, as well as the preparation of the readings to be exhibited, the preparation of the bibliographic review and -for blended students- in the orientation on doubts and difficulties raised in the preparation of the matter for the objective test.</p> <p>For personalized attention, email will be used (on Monday and Wednesday mornings), as well as the Moodle forum (every teaching week of the course), especially in the case of students with recognition of part-time dedication and academic exemption exemption from attendance, for which face-to-face meetings convened in two moments of the semester will be dedicated.</p> <p>Students with recognition of part-time dedication and academic exemption from attendance exemption must develop the methodologies provided for the remaining students, submitting the indicated work (supervised work, readings and bibliographic review). But he will be exempt from attending the lectures, as well as it will be compulsory for him to undergo the objective test at the end of the course.</p>
--	--

Assessment			
Methodologies	Competencies / Results	Description	Qualification
Critical bibliographical	B1 B9	The critical capacity of the student will be evaluated when evaluating the text proposed for recension, as well as his ability to make schematic summaries of it, and the detection of its key concepts	10
Supervised projects	A4 B2 B7 C1	To assess the supervised work to be developed during the course, the development of the basic study on the proposed topics will be taken into account, taking into account the experiential approach - professional or practical - expressed, as well as the interpretation of the same by the student from the models theorists of the Anthropology of health or disability	40

Objective test	A1 C4	<p>The final written test will try to assess the theoretical knowledge obtained from attending to the substitute theoretical materials of the face-to-face classes. It will consist of answering ten questions of short answer, based on the readings on the contents of the program. It is compulsory for blended students and for those who do not attend at least 2/3 of the sessions.</p> <p>It is not a methodology to be developed or compulsory evaluation in the case of face-to-face students. In these cases, the qualification percentage of the 'objective test' is distributed adjusting it among the other methodologies under evaluation, in the proportions expressed in the &quot;evaluation observations&quot;.</p>	20
Workbook	B3 C4	The capacity of analysis, identification of problems and critical argumentation of answers to them will be valued in the personal presentation and comment, followed by debate, at the end of the sessions, on selected readings of Anthropology and ethnography of health and disability.	30

Assessment comments

- The blended students, or those who do not attend at least 2/3 of the sessions of the course, must compulsorily carry out the objective test, as well as the other methodologies contemplated, although only the first will be done in person.

- Regular assistant students may voluntarily choose to take the objective test. If they choose not to do it, supervised work will mean 50% of the grade, readings 35% and bibliographic reviews 15% - The students who present themselves to the second opportunity call must do so in those methodologies not passed -or not presented and should be done- in the first call. In this case, only the objective test of the 2nd call will be face-to-face, while the other methodologies will be covered by sending the corresponding works in digital format, and via Moodle or email.

-The fraudulent performance of the tests or evaluation activities will directly imply the qualification of failure '0' in the matter in the corresponding call, thus invalidating any qualification obtained in all the evaluation activities for the extraordinary call
