General description	Introducción a los materiales complejos es una materia obligatoria de segundo cuatrimestre. Esta asignatura, de carácter claramente interdisciplinar, pretende dar una visión general de los materiales complejos y avanzados: metales, aleaciones, cerámicas, polímeros, híbridos orgánicos-inorgánicos, nanomateriales, cristales plásticos, cristales líquidos, etc. Introduction to complex materials is a compulsory subject of the Master 2nd four-month period. The aims of this interdisciplinary subject is to provide a general overview of the different types of complex and advanced materials: metals and alloys, ceramics, polymers, organic-inorganic hybrids, nanomaterials, plastic crystals, liquid crystals, etc.			
Contingency plan	1. Modifications in the contents. In principle, the contents are maintained in their entirety. If necessary for reasons of force majeure, it will be possible to opt for a more general presentation, which in any case will cover all the most relevant aspects of the subject. 2. Methodologies * Teaching methodologies that are maintained The methodologies will be maintained, but will be carried out in "online mode", i.e. using the TIC tools available to the institution. In the case that part of the students cannot connect and follow the classes in real time, asynchronous methods will be used (e-mail, recordings of the exhibition sessions, more personalized tutorials...). * Teaching methodologies that change Objective tests will be online tests that will be conducted using Moodle or equivalent tools, tracked by TEAMS. 3. Mechanisms of personalized attention to students. Students will receive tutorials through the Teams platform or by corporate email. 4. Modifications in the evaluation. If all students could continue with the non-presential teaching without difficulty, it will be evaluated in the same way as in the presential teaching. Students who are unable to follow synchronous activities online will be assessed for equivalent activities performed asynchronously. * Evaluation observations: None. 5. Modifications to the bibliography or webgraphy. There are no changes in the bibliography / webgraphy.			

Study programme competences	
Code	Study programme competences
A2	Identify and evaluate the different types of complex materials
A5	Understanding the relationships between structure and properties of materials
B2	The students have the skill to apply their knowledge and their ability to solve problems in new or unfamiliar contexts within broader (or multidisciplinary) contexts related to their field of study
B4	That the students can communicate their conclusions and the knowledge and last reasons behind that conclusions to specialized and non specialized audience in a clear and unambiguous way
B8	Applying a critical, logical and creative way of thinking
B13	Analysis-oriented attitude
B14	Ability to find and manage the information
B17	Analyze and decompose processes
C2	Have a good command of spoken and writing expression and understanding of a foreign language.
C7	To assume as a professional and citizen the importance of learning throughout life.
C8	To assess the importance of research, innovation and technological development in the socio-economic and cultural progress of society.

Learning outcomes			
Learning outcomes		Study programme competences	
To know the structure and properties of complex materials		AR2	BR2
		AR5	BR4
			BR8
			BR13
			BR14
			BR17
To understand structure-properties relationships		AR5	BR2
			BR4
			BR8
			BR13
			BR14
			BR17

Contents	
Topic	Sub-topic
General overview of complex and advanced materials: - metals and alloys - ceramics - polymers - organic-inorganic hybrids - nanomaterials, - plastic crystals, liquid crystals, etc.	

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Supervised projects	A2 A5 B2 B4 B8 B13 B14 B17 C2 C7 C8	15	25	40
Objective test	A2 A5 B2 B4 B8 B13 B17 C2	2	0	2

Guest lecture / keynote speech	A2 A5 B8 B13 C2 C7 C8	12	20	32
Personalized attention		1	0	1
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Supervised projects	Activities whose purpose is that the students enlarge the study of the topics presented in each theme and consolidate their acquired knowledge and capabilities. These activities should also help the students learn and improve their capabilities in literature survey.
Objective test	Final exam, at the end of the course, that will help evaluation of the knowledge, competencies and global vision about materials acquired by the students.
Guest lecture / keynote speech	Presentation made by the teacher, on a schematic basis, focusing on the main topics of each theme and covering both theoretical and practical issues.

Personalized attention	
Methodologies	Description
Supervised projects	The personalized attention to students, understood as a support in the teaching-learning process, will take place in the hours of tutoring of the teacher.
Objective test	
Guest lecture /	
keynote speech	

Assessment			
Methodologies	Competencies	Description	Qualification
Supervised projects	A2 A5 B2 B4 B8 B13 B14 B17 C2 C7 C8	Presentation (oral and written) of the tutored work.	60
Objective test	A2 A5 B2 B4 B8 B13 B17 C2	Examination or objective test.	40

Subjects that it is recommended to have taken before
Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus

Other comments

1. The delivery of the documentary works that are made in this matter: 1.1. It will be requested in virtual format and/or computer support. 1.2. It will be done through Moodle, in digital format without the need to print them. 1.3. If it is done on paper - No plastic shall be used. - Double-sided printing will be used. - Recycled paper shall be used. - The printing of drafts shall be avoided.
