

Teaching Guide

Teaching Guide				
Identifying Data				2023/24
Subject (*)	Industrial System Integration		Code	730497237
Study programme	Mestrado Universitario en Enxeñaría Industrial (plan 2018)			
Descriptors				
Cycle	Period	Year	Type	Credits
Official Master's Degree	1st four-month period	Second	Optional	3
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Enxeñaría Industrial			
Coordinador	Casteleiro Roca, José Luis	E-mail	jose.luis.casteleiro@udc.es	
Lecturers	Casteleiro Roca, José Luis	E-mail	jose.luis.casteleiro@udc.es	
Web				
General description	Practical approach for the integration of industrial systems based on IoT as a product of integration of industrial systems within the concept of Industry 4.0			

Study programme competences

Code	Study programme competences
A7	ETI7 - Ability to design electronic systems and industrial instrumentation.
A8	ETI8 - Ability to design and project automated production systems and advanced process control.
B1	CB6 - Possess and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, often in a research context.
B2	CB7 - That students know how to apply the knowledge acquired and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
B3	CB8 - That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
B4	CB9 - That the students know how to communicate their conclusions -and the knowledge and ultimate reasons that sustain them- to specialized and non-specialized audiences in a clear and unambiguous way.
B5	CB10 - That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous.
B6	G1 - Have adequate knowledge of the scientific and technological aspects in Industrial Engineering.
B13	G8 - Apply the knowledge acquired and solve problems in new or unfamiliar environments within broader and multidisciplinary contexts.
B14	G9 - Be able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on social and ethical responsibilities linked to the application of their knowledge and judgments.
B15	G10 - Knowing how to communicate the conclusions -and the knowledge and ultimate reasons that sustain them- to specialized and non-specialized publics in a clear and unambiguous way.
B16	G11 - Possess the learning skills that allow to continue studying in a self-directed or autonomous way.
C1	ABET (a) - An ability to apply knowledge of mathematics, science, and engineering.
C2	ABET (b) - An ability to design and conduct experiments, as well as to analyze and interpret data.
C3	ABET (c) - An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
C6	ABET (f) - An understanding of professional and ethical responsibility.
C7	ABET (g) - An ability to communicate effectively.
C8	ABET (h) - The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
C9	ABET (i) - A recognition of the need for, and an ability to engage in life-long learning.
C11	ABET (k) - An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Learning outcomes

Learning outcomes	Study programme competences		
Know the different technologies for the measurement of environment variables and integration of industrial systems in general	AJ7 AJ8	BJ1 CJ3	CJ1 CJ3
Know the objective, operation, existing technology and know how to size industrial sensor and actuator systems	AJ7 AJ8	BJ1 BJ5 BJ16	CJ1 CJ6 CJ7
Know the interconnection and integration technologies between sensors, actuators and equipment	AJ7 AJ8	BJ1 BJ2 BJ3 BJ4 BJ6 BJ13 BJ14 BJ15	CJ1 CJ2 CJ3 CJ8 CJ9 CJ11

Contents	
Topic	Sub-topic
The contents described in the verification report are developed below according to the distribution shown	<p>Introduction to systems integration. (Topic 1)</p> <p>Measurement and obtaining of variables in industrial environments. Choice and dimensioning of sensor systems. Select and size actuator system technologies. (Topic 2)</p> <p>Design and development of interconnection and integration systems. (Topic 3)</p>
Topic 1: Measurement and obtaining of variables in industrial environments	<p>IoT as a product of integration of industrial systems</p> <p>Introduction to the IoT ecosystem</p>
Topic 2: Choice and dimensioning of sensor and actuator systems	<p>IoT hardware: Architecture, sensors and actuators</p> <p>IoT platforms</p>
Topic 3: Design and development of interconnection and integration systems	<p>Developments with Arduino</p> <p>Ethernet based on Industrial networks</p> <p>Industrial Internet of Things (IIoT) and Industry 4.0</p>

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A7 A8 B1 B5 B16 B6 C1 C6 C8 C9	9	13	22
Supervised projects	A7 A8 B2 B13 C1 C2 C3	3	14	17
Laboratory practice	A7 A8 B1 B8 C1 C2 C3 C11	13	21	34
Mixed objective/subjective test	A7 A8 B1 B3 B4 B15 B14 C7	1	0	1
Personalized attention		1	0	1

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Methodologies	Description
Guest lecture / keynote speech	Keynote speech complemented with the use of audiovisual media and the introduction of some questions to students, in order to transmit knowledge and facilitate learning. The order of the topics covered will not have to be the one described in the teaching guide. In addition, there will be topics that can be seen together on the development of others, and the division between them may not be strict.
Supervised projects	An individual work was carried out, along with the correction of the work of other colleagues. In addition, this work will have to be presented in class.
Laboratory practice	Performing laboratory practice as far as possible; or, failing that, an individual work was carried out, along with the correction of the work of other colleagues. In addition, this work will have to be presented in class.
Mixed objective/subjective test	It consists in carrying out an objective test of approximately 2 hours, in which the acquired knowledge will be evaluated.

Personalized attention

Methodologies	Description
Supervised projects Laboratory practice	The student has the relevant meetings of personalized tutorials, to resolve the concerns arising from the matter.

Assessment

Methodologies	Competencies	Description	Qualification
Mixed objective/subjective test	A7 A8 B1 B3 B4 B15 B14 C7	Exam with part of multiple choice, development questions and exercises	20
Supervised projects	A7 A8 B2 B13 C1 C2 C3	Resolution of a practical case	50
Laboratory practice	A7 A8 B1 B8 C1 C2 C3 C11	Some tasks established in the subject, within the framework of this methodology	30

Assessment comments

As part of the "Laboratory practice" may include aspects such as attendance, attitude, etc., to help obtain the approved. In addition, it may also include in this methodology the assessment of the presentation in class of personal work.

The "Mixed objective/subjective test" can be divided into a multiple choice part and a few questions.

It will be necessary to exceed 35% of the score in the multiple choice of the "Mixed objective/subjective test" to pass, as well as having passed the works collected within the "Supervised projects" methodology.

For the second opportunity there will be no second deadline for delivery of works, and the evaluation related to "Supervised projects" will be included in the "Mixed objective/subjective test".

The evaluation criteria for the early call in December will be the same as those for the second opportunity of the previous year.

Students with recognition of part-time dedication and academic waiver of attendance exemption, second establishes the "NORMA QUE REGULA O RÉXIME DE DEDICACIÓN AO ESTUDO DOS ESTUDANTES DE GRAO NA UDC (Arts. 2.3; 3.b e 4.5) (29/5/212)", will be evaluated in the same way, allowing one more week of margin in the assignments.

The fraudulent completion of tests or assessment activities, once verified, will directly imply that the student will be qualified with "suspension" (numerical grade 0) in the corresponding call for the academic year, whether the offense is committed at the first opportunity as in the second. For this, your qualification will be modified in the first opportunity report, if necessary.

In case the student commits an infraction in the subject (according to the Student Disciplinary Regulations): the student will be graded with a "fail" (numerical grade 0) in the corresponding exam session, whether the infraction is committed at the first or second opportunity. For this, the student's grade will be modified in the first opportunity report, if necessary.

Subjects that are recommended to be taken simultaneously
Subjects that continue the syllabus
Other comments
<p>Recommendations on sustainability and the environment Students will be taught the importance of ethical principles related to the values of sustainability so that they can apply them not only in the classroom, but also in their personal and professional behaviour. To help achieve an immediate sustainable environment and meet the objective of action number 5: "Healthy, environmentally and socially sustainable teaching and research" of the "Green Campus Ferrol Action Plan": The delivery of the documentary work carried out in this subject:- It will be requested in digital format and/or in computer support.- It will be done through Moodle, in digital format without the need to print it.- If it is necessary to do them on paper:&nbsp; o No plastics will be used.&nbsp; o Double-sided printing will be used.&nbsp; o Recycled paper should be used.&nbsp; o Drafts should not be printed. Sustainable use of resources and prevention of negative impacts on the natural environment should be made. Recommendations on Gender Equality and respect for diversity- According to the different regulations applicable to university teaching, the gender perspective must be incorporated in this subject (non-sexist language will be used, bibliography of authors of both sexes will be used, the intervention of male and female students in class will be encouraged...)- We will work to identify and modify sexist prejudices and attitudes, and we will influence the environment to modify them and promote values of respect and equality.- Situations of gender discrimination will be detected and actions and measures to correct them will be proposed.- The full integration of students who, for physical, sensory, mental or socio-cultural reasons, experience difficulties in gaining suitable, equal and beneficial access to university life will be facilitated.</p>

(*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
