Descrición xeral	The main objective of this course is to introduce the students to the basic concepts for the assessment and prognosis of ship maneuverability and to the development of methods for the analysis of maneuvering behavior of ships, including also the basics of characteristics of flows around ships regarding ship propulsion and manoeuvrability.			

Competencias do título	
Código	Competencias do título
A2	CE2 - Demonstrate knowledge, understanding and competences in using model and simulation tools related with ship structures, motions and fluid dynamics (SIM).
B2	CB6 - Acquire and understand knowledge that provides a basis or opportunity to be original in the development and / or application of ideas, usually in a research context.
B3	CB7 - That students know how to apply the acquired knowledge and their ability to solve problems in new or unfamiliar environments within broader (or multidisciplinary) contexts related to their area of study.
B4	CB8 - That students are able to integrate knowledge and face the complexity of making judgments based on information that, being incomplete or limited, includes reflections on the social and ethical responsibilities linked to the application of their knowledge and judgments.
B5	CB9 ? That students are able to communicate their conclusions -and the knowledge and ultimate reasons that sustain them- to specialized and non-specialized publics in a clear and unambiguous way.
B6	CB10 - That students have the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous.
B7	CG1 ? To display the adequate intercultural competence to successfully navigating within multicultural learning environments and to implement basic management principles suitable for a multicultural working environment.
B8	CG2 ? To express an attitude of intellectual inquisitiveness and open-mindedness.
B11	CG5 ? To have the capability to identify, formulate and solve engineering problems within realistic constraints.
B13	CG7 ? To have the capability to critically analyse, synthesise, interpret and summarise complex scientific processes.
C2	CT2 - Mastering oral and written expression in a foreign language.
C4	CT4 - Acting as a respectful citizen according to democratic cultures and human rights and with a gender perspective.
C6	CT6 - Acquiring skills for healthy lifestyles, and healthy habits and routines.
C7	CT7 -Developing the ability to work in interdisciplinary or transdisciplinary teams in order to offer proposals that can contribute to a sustainable environmental, economic, political and social development.

Resultados da aprendizaxe	
Resultados de aprendizaxe	Competencias do título

Students will acquire knowledge about the basic motion equations of the ship, and the hydrodynamic forces which influence its manoevrability characteristics. Students will acquire the ability to develop methods for analysis of manoeuvring behaviour of ships, including the evaluation of rudder design and to design a rudder by themselves. Students will acquire the capabilities to assess the manoeuvrability capabilities of a ship, including also the basic principles and the influence of flows around ships regarding ship propulsion and manoeuvrability.	AM2	BM1 BM2 BM3 BM4 BM5 BM6 BM7 BM10 BM12	CM2 CM4 CM6 CM7

Contidos	
Temas	Subtemas
Coordinates & degrees of freedom	
Nonlinear governing equations of motion hydrodynamic forces & moments	
Rudder forces and rudder design	
Yaw stability	
Manoeuvring tests (constraint & unconstraint model tests)	
Slender body approximation	
Application of CFD simulations	
Influence of shallow water, waves and wind.	

Planificación				
Metodoloxías / probas	Competencias	Horas presenciais	Horas non presenciais / traballo autónomo	Horas totais
Traballos tutelados	A2 B2 B3 B5 B11 B13 C2 C7	5	34	39
Proba mixta	A2 B2 B3 B4 B5 B6 B8 B11 B13 C2 C4	2	0	2
Sesión maxistral	A2 B2 B4 B6 B7 B8 C4 C6	16	16	32
Atención personalizada		2	0	2
*Os datos que aparecen na táboa de planificación son de carácter orientativo, considerando a heteroxeneidade do alumnado				

Metodoloxías	
Metodoloxías	Descrición
Traballos tutelados	Supervised learning process aimed at helping students to work independently in a range of contexts (academic and professional). Focused primarily on learning ?how to do things? and on encouraging students to become responsible for their own learning.
Proba mixta	Oral Test covering the contents of the subject.
Sesión maxistral	Oral presentation (using audiovisual material and student interaction) designed to transmit knowledge and encourage learning. Presentations of this type are variously referred to as ?expository method?, ?guest lectures? or ?keynote speeches?. (The term ?keynote? refers only to a type of speech delivered on special occasions, for which the lecture sets the tone or establishes the underlying theme; it is characterised by its distinctive content, structure and purpose, and relies almost exclusively on the spoken word to communicate its ideas.)

Atención personalizada	
Metodoloxías	Descrición

Sesión maxistral Traballos tutelados	The personalized attention to students, understood as a support in the teaching-learning process, will take place in the hours of tutoring of the professor.

Avaliación			
Metodoloxías	**Competencias**	**Descrición**	**Cualificación**
Proba mixta	A2 B2 B3 B4 B5 B6 B8 B11 B13 C2 C4	Mixed test consisting of essay-type and objective test questions. Essay section consists of open (extended answer) questions; objective test may contain multiple-choice, ordering and sequencing, short answer, binary, completion and/or multiple-matching questions.	60
Traballos tutelados	A2 B2 B3 B5 B11 B13 C2 C7	Preparation of a simulation project with the scope described in the virtual campus. - Explanatory memorandum of the project : 20% - Oral defense: 20%	40

Observacións avaliación
In the second opportunity and in the advanced one the students will have to make the delivery of the totality of the tutored works and the oral presentation of the same.The delivery of the documentary works that are carried out in this matter: It will be requested in virtual format and / or computer support. It will be done through Moodle, in digital format without the need to print them.General EMJMD Sustainable Ship and Shipping SEAS 4.0 evaluation rules: - Students will have only two oportunities to pass a course. If failing to do so, they may be forced to leave the degree. - No part time or lecture attendance exemption are allowed in this degree.

Observacións
To help in achieving a sustainable environment and to get the objective of number 5 action of the "Ferrol Green Campus Action Plan" (Healthy and environmentaly and socially sustainable research and teaching):The assignments to be done in this course:- Will be required in digital format.- Will be delivered using Moodle, with no need to print them.In case it is necessary to print them:- Plastics won´t be used.- Two side printing will be used.- Recycled paper will be used.- Printing drafts will be avoided.A sustainable use of the resources should be done, together with the prevention of negative impacts on the environment.
