	Study programme competences
Code	Study programme competences
A1	FB1 - Capacidade para a resolución dos problemas matemáticos que poidan formularse na enxeñaría. Aptitude para aplicar os
	coñecementos sobre: álxebra lineal; xeometría; xeometría diferencial; cálculo diferencial e integral; ecuacións diferenciais e en derivadas
	parciais; métodos numéricos; algorítmica numérica; estatística e optimización.
A2	FB2 - Comprensión e dominio dos conceptos básicos sobre as leis xerais da mecánica, termodinámica, campos e ondas e
	electromagnetismo e a súa aplicación para a resolución de problemas propios da enxeñaría.
A13	CR7 - Coñecemento dos principios de teoría de máquinas e mecanismos.
A23	TEM4 - Coñecementos e capacidades para aplicar os fundamentos da elasticidade e resistencia de materiais ao comportamento de
	sólidos reais.
B5	CB05 - Que os estudantes desenvolvan aquelas habilidades de aprendizaxe necesarias para emprenderen estudos posteriores cun alto
	grao de autonomía
B7	B5 - Ser capaz de realizar unha análise crítica, avaliación e síntese de ideas novas e complexas
В9	B8 - Adquirir unha formación metodolóxica que garanta o desenvolvemento de proxectos de investigación (de carácter cuantitativo e/ou
	cualitativo) cunha finalidade estratéxica e que contribúan a situarnos na vangarda do coñecemento
C3	C5 - Entender a importancia da cultura emprendedora e coñecer os medios ao alcance das persoas emprendedoras.
C5	C7 - Asumir como profesional e cidadán a importancia da aprendizaxe ao longo da vida.

	Contents		
Topic	Sub-topic		
Chapter 0. The following topics develop the contents set up in	Dynamic equations. Modelling. Vibration of systems of 1 and N degrees of freedom.		
the verification memory.	Buffer. Vibration of continuous systems		
Chapter 1. Introduction to structural dynamics:dynamic	Basic concepts. Classification of vibrations. Modelling systems: stiffness, inertia, and		
equations and modeling.	damping elements. Mathematical models of Single Degree Of Freedom (SDOF)		
	systems. Application of Newton's laws. Application of the principle of virtual		
	displacements. Hamilton principle. Application of the Lagrange equations.		
Chapter 2. Free vibration of SDOF system. Damping.	Free vibration of undamped SDOF systems. Free vibration of viscous damped SDOF		
	systems. Other types of damping.		
Chapter 3. Response of SDOF to harmonic excitation.	Response of undamped SDOF to harmonic excitation. Response of viscous damped		
Damping.	SDOF to harmonic excitation. Complex frequency response. Vibration isolation. Force		
	Transmissibility. Base motion. Response of SDOF due to unbalance in rotating		
	machines.		
Chapter 4. Analytical methods of solution. Response of SDOF	Response of SDOF to special forms of excitation. Ideal step input, rectangular pulse		
to a general dynamic excitation	and ramp loadings. Short-duration impulse. Unit impulse response. Classification of		
	methods. Duhamel Integral Method.		
Chapter 5. Numerical methods of solution. Response of SDOF	Numerical evaluation of the integral of convolution. Method of linear forces. Step by		
to a general excitation.	step methods. The average acceleration method. Methods of Newmark family.		
Chapter 6. Continuous systems. Mathematical models of	Continuous systems. Discrete systems: application of Newton's laws, application of		
Multiple Degrees Of Freedom (MDOF) systems	the Lagrange equations. Equations of motion.		
Chapter 7. Free vibration response of MDOF systems	Natural frequencies and modes of vibration of MDOF systems. Free vibration		
	response of MDOF systems. Rigid body modes of vibration. Some properties of the		
	natural frequencies and natural modes. Scaling or normalizing. Orthogonality.		
	Expansion theorem. Free vibration response of MDOF systems. Mode-superposition		
	method.		
Chapter 8. Forced vibration response of MDOF systems.	Mode-superposition method response of undamped MDOF systems. Truncation.		
	Damped MDOF systems. Orthogonal, modal, classic or proportional damping.		
	Rayleigh damping. Non-proportional damping.

	Methodologies
Methodologies	Description
Laboratory practice	Methodology that allows the realization of activities of practical character, with computer, such as modelization, analysis and
	dynamic simulation of mechanical and structural elements.
Supervised projects	Methodology designed to promote autonomous learning of students, solving a problem that involves the contents of the course
	and involves specific skills, under teacher supervision.
Problem solving	Técnica a través da cal hai que resolver unha situación problemática específica, a partir da
	coñecemento que se traballou e que pode ter máis dunha solución.
Guest lecture /	Oral lecture supplemented with the use of audiovisual means, aiming transmit knowledge and facilitate the learning within the
keynote speech	scope of vibration analysis

	Personalized attention
Methodologies	Description
Laboratory practice	Guidance and revision about specific problems posed at the development of the different activities proposed in the course.
Supervised projects	Revision and help when making supervised projects.

		Assessment	
Methodologies	Competencies	Description	Qualification
Laboratory practice	A1 A2 A13 A23 B5 B7	Students must systematically attend practices. The proposed activities have to be	30
	B9 C3 C5	done along the practical sessions, in order to be revised and evaluated by the teacher.	
		The practices that aren?t developed during the practical classes, and periodically	
		revised by the teacher will not be considered in the qualification.	
		The evaluation process of the laboratory lessons includes a two hour practice session,	
		where the student solves with the computer the problems proposed by the teacher,	
		individually.	
Supervised projects	A1 A2 A13 A23 B5 B7	The projects include the theoretical and practical contents of the course. They are to	70
	B9 C3 C5	be done individually. The projects will be developed during the practical sessions	
		along the course and completed at home on the student personal work hours. The	
		tasks will be followed and revised during the practical lessons. If the projects aren?t	
		matured during the practical classes, nor periodically revised by the teacher, will not	
		be considered in the qualification.	

Assessment comments

Students, whose presence throughout the

semester where insufficient to track their work, by academic waiver or other causes, must also develop and present practices and tutored work for their evaluation. The follow-up of this work shall be carried out in tutoring sessions. In this case, the process of evaluation may include in addition to the presentation of practices and tutored work, a practice session, individually or in group, in which the student addresses manually or with the computer the problems raised by the teacher.

For the second chance you can present or improve practices and tutored work. The tracking is done in tutorial sessions. The assessment is done through presentation of practices and tutored work pending and/or improved. The process of evaluation may include, in addition to the presentation of practices and tutored work, a practical session, individually or in group, in which the student addresses manually or with the computer the problems posed by the teacher.

Other comments

To help achieve a sustained immediate
environment and meet the objective of the action number 5: "Teaching and
healthy and sustainable environmental and social research" of the
"Plan of action Green Campus Ferrol":
Documentary work presented in this matter:
* Should be requested in virtual format or computer support
* Will take place through Moodle, in digital format without having to
print them
* Should be required on paper:
-Not be they used plastic
-There will be double-side
printing. &nbs
-Will use recycled
paper.
-Prevent printing drafts.
You should make a sustainable use of
resources and the prevention of negative impacts on the natural environment
