Teaching Guide				
Identifying Data				2019/20
Subject (*)	Advanced manufacturing techniques		Code	730G04075
Study programme	Grao en enxeñaría en Tecnoloxías Industriais			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	2nd four-month period	Fourth	Optional	6
Language	Spanish			
Teaching method	Face-to-face			
Prerequisites				
Department	Enxeñaría Naval e Industrial			
Coordinador	Nicolas Costa, Gines	E-mail	gines.nicolas@udc.es	
Lecturers	Amado Paz, José Manuel Nicolas Costa, Gines Ramil Rego, Alberto Yañez Casal, Armando Jose	E-mail	jose.amado.paz@udc.es gines.nicolas@udc.es alberto.ramil@udc.es armando.yanez@udc.es	
Web				
General description	The objective of this subject is to make a brief introduction to the fundamentals of laser technology and its main applications in the industry, focusing especially on the applications available in our laboratory. The orientation of the teaching has a high practical content and of beginning the investigation that is developed by means of a tutored work.			
Contingency plan				

Study programme competences	
Code	Study programme competences
B5	CB5 Que os estudantes desenvolvan aquelas habilidades de aprendizaxe necesarias para emprenderen estudos posteriores cun alto grao de autonomía
B7	B5 Ser capaz de realizar unha análise crítica, avaliación e síntese de ideas novas e complexas
B9	B8 Adquirir unha formación metodolóxica que garanta o desenvolvemento de proxectos de investigación (de carácter cuantitativo e/ou cualitativo) cunha finalidade estratéxica e que contribúan a situarnos na vangarda do coñecemento

Learning outcomes		
Learning outcomes	Study programme competences	
Knowledge of the fundamentals and technological aspects of new fabrication processes Knowledge of the laser Analysis, critical evaluation and synthesis of the mentioned technologies	B5 B7 B9	

Contents	
Topic	Sub-topic
Manufacturing processes with high energy density beams	Laser technology (fundamentals, systems, applications, security) Materials processing with other techniques
Additive manufacturing processes	Laser cladding 3D printing
Micromanufacturing	Laser ablation X-ray lithography Focused ion beam

Monitoring techniques and process control	Review of the different techniques of interferometry, holography, speckle and scattering Applications to the measurements of displacements, form defects, superficial characterization and velocimetry Analytical and characterization techniques based on laser spectroscopy: laser induced fluorescence, laser induced plasma spectroscopy

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student?s personal work hours	Total hours
Guest lecture / keynote speech	B5 B7 B9	21	42	63
Laboratory practice	B5 B7	14	28	42
Supervised projects	B5 B7 B9	7	35	42
Personalized attention		3	0	3
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Theoretical lessons
Laboratory practice	Session of laboratory practices of each of the thematic blocks
Supervised projects	Realization of a bibliographic, theoretical, numerical and/or practical work

Personalized attention	
Methodologies	Description
Supervised projects Guest lecture / keynote speech Laboratory practice	Doubts resolution of the theory and practical works. A supervisor will be assigned to each student.

Assessment			
Methodologies	Competencies	Description	**Qualification**
Supervised projects	B5 B7 B9	A memory of work will be presented and defended in front of professors and students of the course.	100

Assessment comments
It is required to attend 75% of the lectures and all the laboratory practices.
