Teaching Guide				
Identifying Data				2020/21
Subject (*)	Mathematics 1		Code	730G05001
Study programme	Grao en Enxeñaría Naval e Oceánica			
Descriptors				
Cycle	Period	Year	Type	Credits
Graduate	1st four-month period	First	Basic training	6
Language	Galician			
Teaching method	Hybrid			
Prerequisites				
Department	Matemáticas			
Coordinador	Brozos Vázquez, Miguel	E-mail	miguel.brozos.vazquez@udc.es	
Lecturers	Brozos Vázquez, Miguel	E-mail	miguel.brozos.vazquez@udc.es	
Web	campusvirtual.udc.es/moodle			
General description	This course is an introduction to Linear Algebra and differentiation and integration of functions of one variable.			

Contingency plan	<p>1. Modifications to the contents</p> <p>There are no changes in contents.</p> <p>2. Methodologies</p> <p>*Teaching methodologies that are maintained</p> <p>Teaching methodologies are the same.</p> <p>*Teaching methodologies that are modified</p> <p>The type of teaching methodologies is the same, except for the fact that it becomes completely online. Moreover, there are changes in the evaluations.</p> <p>3. Mechanisms for personalized attention to students</p> <p>Students will be attended preferably by:</p> <ul style="list-style-type: none"> - Email: daily. - Moodle platform: daily, specially by means of the forums for questions and discussions of each of the topics of the subject. - Teams: for a direct interaction between students and profesor, in office hours or by appointment. <p>4. Modifications in the evaluation</p> <p>The homework and exercise, that will be defended by Teams, will gain weight in a virtual teaching scenario.</p> <p>*Evaluation observations:</p> <p>The students with recognition of part-time dedication and academic exemption from attendance will be assessed through the objective tests in the same conditions as the rest of the students.</p> <p>The second opportunity will be graded following the same criteria than in the first one.</p> <p>5. Modifications to the bibliography or webgraphy</p> <p>The main bibliographyc sources are available via Moodle. Recommendations for references are unchanged, but use of sources available online will be preferred.</p>
------------------	--

	Study programme competences
Code	Study programme competences
A1	Skill for the resolution of the mathematical problems that can be formulated in the engineering. Aptitude for applying the knowledge on: linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and in partial derivatives; numerical methods; algorithmic numerical; statistics and optimization
B1	That the students proved to have and to understand knowledge in an area of study what part of the base of the secondary education, and itself tends to find to a level that, although it leans in advanced text books, it includes also some aspects that knowledge implicates proceeding from the vanguard of its field of study
B2	That the students know how to apply its knowledge to its work or vocation in a professional way and possess the competences that tend to prove itself by the elaboration and defense of arguments and the resolution of problems in its area of study
B5	That the students developed those skills of learning necessary to start subsequent studies with a high degree of autonomy
B6	Be able to carrying out a critical analysis, evaluation and synthesis of new and complex ideas.

C4	Recognizing critically the knowledge, the technology and the available information to solve the problems that they must face.
----	---

Learning outcomes			
Learning outcomes	Study programme competences		
Identify mathematical concepts and tools to solve problems that can appear in an engineering context.	A1	B1 B2 B5 B6	C4
To show the ability of using techniques of Linear Algebra, Geometry and Calculus to be applied in problem solving.	A1	B1 B2 B5 B6	C4

Contents	
Topic	Sub-topic
The \mathbb{R}^n space	<ul style="list-style-type: none"> - The complex plane. Operations with complex numbers. Polar form. - Vector structure: <ul style="list-style-type: none"> The linear spaces \mathbb{R}^2 and \mathbb{R}^3. Linear subspaces. Bases and dimension. Coordinates. Systems of linear equations. - Metric structure: <ul style="list-style-type: none"> Scalar product, norm and distance. - Topological structure: <ul style="list-style-type: none"> Topological classification of points and sets. Polar, cylindrical and spherical coordinates.
Linear maps	<ul style="list-style-type: none"> Maps. Linear maps. Basic properties of linear maps. Matrix associated to a linear map. Diagonalization of endomorphisms: invariant subspaces, eigenvalues and eigenvectors, diagonalizable endomorphisms.
Differential Calculus	<ul style="list-style-type: none"> Topology in \mathbb{R}. Functions of one variable. Continuity. Smooth functions of one variable. Taylor polynomial. Parametrized curves in \mathbb{R}^n. Reparametrizations.
Integral Calculus	<ul style="list-style-type: none"> Riemann sums. Integrable functions. Main theorems in integral calculus: Mean value theorem, Fundamental theorem and Barrow's rule. Computation of primitive functions. Polynomial interpolation. Numerical integration: Simpsons' rule. Computation of volumes. Length of curves and line integrals of scalar functions.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A1 B5 B6 C4	30	30	60

Problem solving	A1 B1 B2 B5 B6 C4	30	30	60
Supervised projects	A1 B1 B2 B5 B6 C4	0	10	10
Mixed objective/subjective test	A1 B1 B2 B5 B6 C4	8	8	16
Personalized attention		4	0	4
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	The course will be developed during the regular classes where the professor will explain the main concepts and results of the subject.
Problem solving	This classes are organiized in such a way that we practice how to solve the proposed problems.
Supervised projects	Homework that professors is going to asses during the course.
Mixed objective/subjective test	Three exams will be carried out during the course. The first one will be a partial exam where only some of the chapters will be considered. A final exam will be done at the end of the semester. Furthermore a computer exam will be carried out.

Personalized attention	
Methodologies	Description
Problem solving Supervised projects	<p>The contents of the subject as well as the developed methodologies require that students also work by themselves. This can generate some personalized questions that they can solve by asking the teachers.</p> <p>The students with recognition of part-time dedication and academic exemption from attendance can use the tutorials as a reference in order to follow the course and the autonomous work.</p>

Assessment			
Methodologies	Competencies	Description	Qualification
Mixed objective/subjective test	A1 B1 B2 B5 B6 C4	<p>Written exams to assess the knowledge of the subject by the students. The subject will consist on two parts and the final qualification of the subject will be the addition of the qualification obtained at each of these parts.</p> <p>1) The first one will be performed during the teaching period and will involve all the chapters studied until the celebration of the exam. If the student passes this exam, the qualification is retained until the end of the present course. This part will be recoverable in the final exam (second chance), to be held in July.</p> <p>2) The second (and final) exam will be carried out in the period of final exams. It will involve the second part of the subject and a second chance to pass the first part.</p> <p>In case of passing any of these two parts, either in the partial exam or in the final exam of January, the qualification is retained for the present course until the exam of second opportunity.</p>	80
Supervised projects	A1 B1 B2 B5 B6 C4	Homework that professors is going to asses during the course.	20

Assessment comments
<p>The students with recognition of part-time dedication and academic exemption from attendance will be assessed through the objective tests in the same conditions as the rest of the students.</p> <p>The second opportunity will be graded following the same criteria than in the first one.</p>

Other comments
<p>Homework of this course will attend to the following: Preferably, virtual homework will be used, when printing is not required. In the case that paper is needed, then: No plastic materials will be used; Printing will be done both sides; Recycled paper will be used as possible; Unnecessary printed drafts will be avoided.</p> <p>In general, a sustainable use of natural resources will be done. Moreover, ethic principles related to sustainability will be followed.</p>
