Seneral description	This course is an introduction to Linea	r Algebra and	differentiation a	and integration of func	tions of one variable.

	Study programme competences
Code	Study programme competences
A1	Skill for the resolution of the mathematical problems that can be formulated in the engineering. Aptitude for applying the knowledge on:
	linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and in partial derivatives;
	numerical methods; algorithmic numerical; statistics and optimization
B1	That the students proved to have and to understand knowledge in an area of study what part of the base of the secondary education, and
	itself tends to find to a level that, although it leans in advanced text books, it includes also some aspects that knowledge implicates
	proceeding from the vanguard of its field of study
B2	That the students know how to apply its knowledge to its work or vocation in a professional way and possess the competences that tend to
	prove itself by the elaboration and defense of arguments and the resolution of problems in its area of study
B5	That the students developed those skills of learning necessary to start subsequent studies with a high degree of autonomy
В6	Be able to carrying out a critical analysis, evaluation and synthesis of new and complex ideas.
C4	Recognizing critically the knowledge, the technology and the available information to solve the problems that they must face.

Learning outcomes			
Learning outcomes	Study programme		
	COI	mpeten	ces
To identify mathematical concepts and tools to solve problems that can appear in an engineering context.	A1	B1	C4
		B2	
		B5	
		В6	
To show the ability of using techniques of Linear Algebra, Geometry and Calculus to be applied in problem solving.	A1	B1	C4
		B2	
		B5	
		В6	

Contents		
Topic	Sub-topic	

The R^n space	- The complex plane. Operations with complex numbers. Polar form.
	- Vector structure:
	The linear spaces R^2 and R^3.
	Linear subspaces.
	Bases and dimension. Coordinates.
	Systems of linear equations.
	- Metric structure:
	Scalar product, norm and distance.
	- Topological structure:
	Topological classification of points and sets.
	Polar, cylindrical and spherical coordinates.
Linear maps	Maps.
	Linear maps.
	Basic properties of linear maps.
	Matrix associated to a linear map.
	Diagonalization of endomorphisms: invariant subspaces, eigenvalues and
	eigenvectors, diagonalizable endomorphisms.
Differential Calculus	Topology in R.
	Functions of one variable. Continuity.
	Smooth functions of one variable.
	Taylor polynomial.
	Parametrized curves in R^n. Reparametrizations.
Integral Calculus	Riemann sums.
	Integrable functions. Main theorems in integral calculus: Mean value theorem,
	Fundamental theorem and Barrow's rule.
	Computation of primitive functions.
	Polynomial interpolation.
	Numerical integration: Simpsons' rule.
	Computation of volumes. Length of curves and line integrals of scalar functions.

	Methodologies
Methodologies	Description
Guest lecture /	The course will be developed during the regular classes where the professor will explain the main concepts and results of the
keynote speech	subject.
Problem solving	This classes are organiized in such a way that we practice how to solve the proposed problems.
Supervised projects	Homework that professors is going to asses during the course.
Mixed	Three exams will be carried out during the course. The first one will be a partial exam where only some of the chapters will be
objective/subjective	considered. A final exam will be done at the end of the semester. Furthermore a computer exam will be carried out.
test	

	Personalized attention
Methodologies	Description
Problem solving	The contents of the subject as well as the developed methodologies require that students also work by themselves. This can
Supervised projects	generate some personalized questions that they can solve in office hours. Office hours will be face-to-face if possible,
	otherwise they will be online.
	The students with recognition of part-time dedication and academic exemption from attendance can use the tutorials as a reference in order to follow the course and the autonomous work.

Assessment			
Methodologies	Competencies	Description	Qualification
Mixed	A1 B1 B2 B5 B6 C4	Written exams to assess the knowledge of the subject by the students. The subject	80
objective/subjective		will consist on two parts and the final qualification of the subject will be the addition of	
test		the qualifications obtained at each of them.	
		1) The first part will be performed during the teaching period and will involve all the	
		chapters studied until the celebration of the exam. If the student passes this exam,	
		the qualification is retained until the end of the present course. This part will be	
		recoverable in the final exam (second chance), to be held in July.	
		2) The second (and final) exam will be carried out in the period of final exams. It will	
		involve the second part of the subject and a second chance to pass the first part.	
		In case of passing any of these two parts, either in the partial exam or in the final	
		exam of January, the qualification is retained for the present course until the exam of	
		second opportunity (and the extraordinary exam in december if that is the case).	
		To pass the subject is compulsory to obtain at least 30% of the maximum grade in	
		each part.	
Supervised projects	A1 B1 B2 B5 B6 C4	Students must do some autonomous work related with the contents of the subject and	20
		following specific guidelines.	

Assessment comments

The students with recognition of part-time dedication and academic exemption from attendance will be assessed through the objective tests in the same conditions as the rest of the students.

The second opportunity and the extraordinary exam in december will be graded following the same criteria than in the first one.

Fraudulent behaviour will result in a "0" qualification in the subject for the two opportunities.

Other comments

Students are encouraged to attend the "Course 0" with preliminaries in the contents of the couse. Homework of this course will attend to the following: anbsp; anbs

- Unnecessary printed drafts will be avoided.

In general, a sustainable use of natural resources will be

done. Moreover, ethic principles related to sustainability will be

followed. The development of this course will be done following the basic

principle of non-discrimination, particularly of non-discrimination on

the basis of gender, and promoting the values ??of respect and equality

among people.

(*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
