General description				

Study programme competences

Code	Study programme competences
A1	Skill for the resolution of the mathematical problems that can be formulated in the engineering. Aptitude for applying the knowledge on: linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and in partial derivatives; numerical methods; algorithmic numerical; statistics and optimization
A2	Understanding and domination of the basic concepts on the general laws of the, thermodynamics, mechanics, fields and waves and electromagnetism and its application for the resolution of problems characteristic of the engineering
B1	That the students proved to have and to understand knowledge in an area of study what part of the base of the secondary education, and itself tends to find to a level that, although it leans in advanced text books, it includes also some aspects that knowledge implicates proceeding from the vanguard of its field of study
B2	That the students know how to apply its knowledge to its work or vocation in a professional way and possess the competences that tend to prove itself by the elaboration and defense of arguments and the resolution of problems in its area of study
B3	That the students have the ability to bring together and to interpret relevant data (normally in its area of study) to emit judgments that include a reflection on relevant subjects of social, scientific or ethical kind
B6	Be able to carrying out a critical analysis, evaluation and synthesis of new and complex ideas.
C1	Using the basic tools of the technologies of the information and the communications (TIC) necessary for the exercise of its profession and for the learning throughout its life.

Learning outcomes

Learning outcomes	Study programme competences		
Understanding and know-how of static, kinematic, dynamic, waves, and their applications for the resolution of engineering situations.	A1	B1	C1
	A2	B2	
		B3	
		B6	

Contents

Topic	Sub-topic
Chapter I INTRODUCTION	Section 1 Introduction Section 2 Physical magnitudes Section 3 Vectors

Chapter II STATIC EQUILIBRIUM	Section 4 Equilibrium of particles Section 5 Systems of forces Section 6 Equilibrium of rigid bodies
Chapter III KINEMATICS	Section 7 Kinematics of particles Section 8 Relative movement
Chapter IV DYNAMICS OF A SINGLE PARTICLE	Section 9 Principles Section 10 Work and energy
Chapter V DYNAMICS OF RIGID BODIES	Section 11 Dynamics of particles systems Section 12 Dynamics of rigid bodies
Chapter VI DYNAMICS OF DEFORMABLE MEDIA	Section 13 Deformable media Section 14 Statics of fluids Section 15 Dynamics of fluids
Chapter VII Mechanical waves	Section 16 Wave movement Section 17 Sound

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A2 B6	21	25.2	46.2
Problem solving	A1 B1 B2 B3 C1	13	52	65
Laboratory practice	C1	10	2	12
Objective test	A1 A2 B1 B3 B6	2	2.8	4.8
Objective test	A1 A2 B1 B3 B6	4	8	12
Personalized attention		10	0	10
(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.				

Methodologies	
Methodologies	Description
Guest lecture / keynote speech	Lecture Explanation and resolution of fundamentals. Comments on bibliography
Problem solving	Medium group: Study of cases and problem solving.
Laboratory practice	Laboratory: students will perform 4 laboratory practices (2 h per session) and an exam about the practices
Objective test	The course is divided in 2 parts, each one with their exam. The first part includes: vectors, static and kinematics. The exam will be held on a date fixed by the official calendar.
Objective test	The second exam includes: dynamics of particles, dynamics of rigid bodies, fluids and waves. The date coincides with the final exam which will be approved by the Xunta de Centro.

Personalized attention	
Methodologies	Description

Problem solving	Tutorials about lectures, exercises, and other situations in relation with the course. Students with recognition of part time dedication and academicians' dispensations of assistance will be evaluated of the same way that the rest.
-----------------	---

Assessment			
Methodologies	Competencies	Description	Qualification
Laboratory practice	C1	? Attendance at lab is compulsory. To get a final qualification students must make 5 practices. ? They will be not admitted lack of assistance without justification ? Qualification of practices represents 10% of the total.	10
Objective test	A1 A2 B1 B3 B6	? There will be a Objective test that will be held during the four-month period. This exam includes the chapters of introduction to Physics, statics and kinematics ? The contribution of this objective test is 30%. The test will be in 3 parts: theory (T = 40 % of the score), problems solving (30 % of the score) and homeworks (30% of the score). ? The total qualification is given by: $NOTA(E1) = 0.4T + 0.3P + 0.3E$? If a lack of attendance before the exam $NOTA(E1) = 0.4T + 0.3P + 0.3E - 0.4$	21
Objective test	A1 A2 B1 B3 B6	? The final Objective test will include the second part of the course: dynamics of particles, dynamics of rigid solid, fluids and waves. ? The score of this exam is 50%. ? The score distribution is equal to the previous one. ? The exam date will coincide with the final exam date to be approved in the Xunta de Centro. ? In July, students will only have to examine suspended parts.	35
Guest lecture / keynote speech	A2 B6	? Attendance at lectures is compulsory. ? 5 unexcused absences are only allowed.	10

Problem solving	A1 B1 B2 B3 C1	? Attendance at problem solving is compulsory. ? In total, there will be 65 problems (30+35). A minimum limit is required to score, 80 % of right solutions. Score will start in 5 (80% of right solutions) to 10 (100% right). ? Attendance at tutorial hours is compulsory (4 tutorials per exam, 8 in total). Other the score would be penalised.	24
-----------------	----------------	---	----

Assessment comments

Final qualification is given by the equation: $\text{Nota} = 0.1 \cdot \text{Practices} + 0.1 \cdot \text{Asistence} + 0.3 \cdot \text{E1} + 0.5 \cdot \text{E2}$
 where: Practices is the score of lab practices Asistence is the ratio number of attendance/ total E1 is the score of the first Objective test
 E2 is the score of the first Objective test

Criteria for the
 evaluation of objective tests and problem solving

Rubric will be used to
 evaluate the competency Understanding and mastery of the
 fundamentals about statics, kinematics, dynamics and waves and their
 applications to engineering problems. The following
 sub-competencies shall be taken into account:

The student has
 knowledge about general laws

The student analyzes
 problems, identifies magnitudes and their relative importance.

The student uses the
 appropriate tools to analyse and to calculate.

The student is
 capable of analyzing the coherence of the results.

The student gets
 error-free numerical results.

The student expresses
 the result with the appropriate units.
