	Study programme competences
Code	Study programme competences
A5	Have a capacity for the space vision and knowledge of the techniques of graphic representation, so much for traditional methods of metric
	geometry and descriptive geometry, as through the applications of design assisted by computer
B1	That the students proved to have and to understand knowledge in an area of study what part of the base of the secondary education, and
	itself tends to find to a level that, although it leans in advanced text books, it includes also some aspects that knowledge implicates
	proceeding from the vanguard of its field of study

B2	That the students know how to apply its knowledge to its work or vocation in a professional way and possess the competences that tend to
	prove itself by the elaboration and defense of arguments and the resolution of problems in its area of study
B4	That the students can transmit information, ideas, problems and solutions to a public as much specialized as not specialized
B5	That the students developed those skills of learning necessary to start subsequent studies with a high degree of autonomy
B6	Be able to carrying out a critical analysis, evaluation and synthesis of new and complex ideas.
C1	Using the basic tools of the technologies of the information and the communications (TIC) necessary for the exercise of its profession and
	for the learning throughout its life.
C2	Coming across for the exercise of a, cultivated open citizenship, awkward, democratic and supportive criticism, capable of analyzing the
	reality, diagnosing problems, formulating and implanting solutions based on the knowledge and orientated to the common good.
C5	Assuming the importance of the learning as professional and as citizen throughout the life.
C6	Recognizing the importance that has the research, the innovation and the technological development in the socioeconomic and cultural
	advance of the society.

Learning outcomes

	Contents
Торіс	Sub-topic
The following blocks or themes develop the contents	Spatial vision development techniques. Metric and descriptive geometry. Graphic
established in the Verification Report card, which are:	representation systems. Introduction to standardization. Computer assisted drawing.
1. SUBJECT TOPICS	1.1 ObJective
	1.2 Concept of the subject
	1.3 Exhibition of the methodology
	1.4 Exhibition of the program
	1.5 Drawing instruments
2. BASIC GRAPHICAL EXPRESSION TECHNIQUES	2.1 Review of metric geometry and projective geometry
	2.2 Descriptive geometry
3. REPRESENTATION TECHNIQUES. STANDARDIZATION	3.1 Presentation of plans
	3.2 Presentation of the drawings
	3.3 Sketch
	3.4 Orthogonal views
	3.5 Standardized views
	3.6 Cuts and sections
	3.7 Dimensioning
	3.8 Dimensional tolerances
	3.9 Graphic presentations
4. DIHEDRAL SYSTEM	4.1 Point and line
	4.2 Planes and belonging between straight point and plane
	4.3 Intersection, parallelism and perpendicularity
	4.4 Tilting, turning and shifting
	4.5 Distances and angles
	4.5 Distances and angles

5. APPLICATIONS OF ENGINEERING	5.1 Drawing in Mechanical Engineering
	5.1.1 Mechanical sets. Representation of mechanical assemblies. Quartering. Plans
	and definition of each piece. Standardized pieces. Explosion sets
	5.2 Connection elements:
	5.2.1 Detachable connections: Threaded connections: Terminology. Forms of thread
	profiles. Symbology and representation. Dimension. Threaded holes. Screws: types,
	representation. Nuts Fixing systems. Keyed links: Types. Representation and
	dimension
	5.2.2 Fixed connections: Welding. Types. Representation
	5.3 Springs: Types: compression, traction, torsion. Flat springs. Representation.
	Dimension
	5.4 Bearings: Sliding and rolling bearings. Elements of a bearing. Classification.
	Representation. Dimension. Standardization. Lubrication. Obturation. Fixings
	5.5 Gears: Use. Representation. Dimension
5. LAYOUT OF TECHNICAL DRAWINGS BY COMPUTER	5.1 Introduction to software
	5.2 Coordinate system
	5.3 Study of the orders of drawing, modification and visualization.
	5.4 Representation of pieces

*)The information in the planning table is for	r quidance only and does not t	take into account the	beterogeneity of the stur	lonts

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies			
Methodologies	Description		
Guest lecture /			
keynote speech	Oral presentation complemented by the use of audiovisual media and the		
	Introduction of some questions directed to the students, with the purpose of transmitting		
	Knowledge and facilitate learning.		
ICT practicals			
	It will be formulated the realization of a set of exercises in autocad.		

Aprendizaxe servizo	Methodology that combines community service with learning in a single project, in which students are trained working on real
	needs of their environment in order to improve it.
	Students enrolled in the subject will be asked to participate in a service-learning activity with a collaborating entity. The student
	may choose between the service-learning activity or the assessable exercises of the practices through ICT, that is, this activity
	and the following are exclusive, so that students will only do one of them. The number of hours dedicated to this activity will
	therefore be the sum of the amount planned for each activity, that is, 20 hours of face-to-face work and 40 hours of
	autonomous work.
Laboratory practice	
	Problem solving. The realization of a set of exercises is proposed, which will be delivered weekly.
Problem solving	
	Problem solving. The realization of a set of exercises is proposed, which will be delivered weekly
Mixed	
objective/subjective	A test is proposed at the end of the course, of an eminently practical nature, in which the criteria and skills acquired are
test	reflected. The exercises for the evaluation will be applications of cases in which the answer must be expressed, mainly, in a
	graphic way. No partial evaluations are proposed, although systems may be established that allow the release of part of the
	matter.
	If the student follows the continuous evaluation it will not be necessary to perform the test.

Personalized attention		
Methodologies	Description	
ICT practicals	It will be developed in person in the classroom and in the office tutorials. It will also be done in a non-contact way through the	
Mixed	Moodle platform and through email.	
objective/subjective		
test	Also, throughout the course the teacher will be available to the student during tutorial hours to clarify any doubts that may	
	arise. It is possible to arrange an appointment at another time through the teacher's email.	
	Both in the internships through ICT and in the service-learning activity, students will have personalized and group tutorials to	
	monitor their work.	
	For students with academic dispensation will be developed in person at the office tutorials and may arrange an appointment a	
	another time through the teacher's email.	

		Assessment	
Methodologies Competencies Description		Description	Qualification
Laboratory practice A5 B1 B2 B4 B5 B6		Descriptive geometry + industrial drawing + Tests	20
	C1 C2 C5 C6	In the modality of continuous evaluation several works and tests related to the topics	
		of the program will be carried out	
ICT practicals	A5 B1 B2 B4 B5 B6	Practices with autocad.	7
	C1 C5 C6	Continuous evaluation and supervised jobs.	
Mixed	A5 B1 B2 B4 B5 B6	The test will evaluate the acquisition of criteria, which is derived from an adequate	30
objective/subjective	C1 C2 C5 C6	assimilation of the acquired knowledge, as well as the attainment of the necessary	
test		skill for a correct graphic representation. His character will be eminently practical. The	
		level of execution required will be the same as in the work carried out during the	
		course.	
		The student who with the continuous assessment modality has demonstrated that he	
		has an adequate base will be exempt from this part.	
Aprendizaxe servizo	A5 B1 B2 B4 B5 B6	As mentioned in the planning section the activity "service-learning" and the	7
	C1 C2 C5 C6	activity "Practices through ICT" are exclusive, so students will choose	
		between doing one or another activity, so that the grade corresponding will be the sum	
		of the assigned to each activity, that is, 14% of the final grade.	

Problem solving

B1 B2 B4 B5 B6 C1 C2 C5 C6 Descriptive geometry + industrial drawing + Tests In the modality of continuous evaluation several works and tests related to the topics

of the program will be carried out.

36

Assessment comments

1st call: the student who does not follow the

continuous evaluation may do an objective test with a 100% grade.

2nd call: the objective test will have a 100%

rating.

Students with academic emption are exempt from continuous evaluation. On the first and second chance, they must do one test with a 100% rating.

Recommendations	
Subjects that it is recommended to have taken before	
Subjects that are recommended to be taken simultaneously	
Subjects that continue the syllabus	
Other comments	

In this subject, together with the acquisition of basic knowledge that allow to act with criteria, it is essential the personal exercise. This can not be replaced, nor the time needed to acquire the skill can be shortened. Therefore it is necessary to respect the time programmed for this activity. In fact, the number of hours indicated is the minimum that is considered essential. Given the importance of order and continuity in work, the teacher can be consulted on the approach and distribution of available time. Even though what is indicated below correspondsto the criteria of behaviour and attitude towards the issues raised by theprofessors in charge of this teaching during all the years in which we havetaught these courses, by legal imperative we are obliged to specifyspecifically, the following: "To help achieve a sustained immediateenvironment and meet the objective of action number 5:" Healthy andenvironmental and social teaching and research "of the" Green CampusFerrol Action Plan ": Thedelivery of the documentary works that are made in this matter: ? Will be requested in virtual format and / orcomputer support ? It will be done throughMoodle, in digital format without the need to print them ? If it is necessary to make them on paper: - Plastics will not be used - Double-sided prints will bemade. - Recycled paper will be used. - Printing of drafts will be voided. Further: ? A sustainable use of resources and the prevention of negative impacts on the natural environment must be made. ? The importance of ethical principles related to the values ?? of sustainability in personal and professional behaviours must be taken into account. ? Genderperspective is incorporated into the teaching of this subject (non-sexistlanguage will be used, bibliography of authors of both sexes will be used,intervention in class of students will be encouraged ...). ? Work will be done to identify and modifyprejudices and sexist attitudes, and the environment will be influenced tomodify them and promote values ??of respect and equality. ? Discrimination situations must bedetected and actions and measures will be proposed to correct them.? The full integration of students who, for physical, sensory, psychological or socio-cultural reasons, have difficulties in gaining adequate, equal and beneficial access to university life will be facilitated.

(*)The teaching guide is the document in which the URV publishes the information about all its courses. It is a public document and cannot be modified. Only in exceptional cases can it be revised by the competent agent or duly revised so that it is in line with current legislation.
