

Teaching Guide

Identifying Data					2020/21
Subject (*)	Mathematics 2		Code	730G05005	
Study programme	Grao en Enxeñaría Naval e Oceánica				
Descriptors					
Cycle	Period	Year	Type	Credits	
Graduate	2nd four-month period	First	Basic training	6	
Language	Galician				
Teaching method	Hybrid				
Prerequisites					
Department	Matemáticas				
Coordinador	Brozos Vázquez, Miguel	E-mail	miguel.brozos.vazquez@udc.es		
Lecturers	Brozos Vázquez, Miguel	E-mail	miguel.brozos.vazquez@udc.es		
Web	campusvirtual.udc.es/moodle				
General description	This course begins with an introduction to Differential and Integral Calculus in several variables. The second part of the course treats parametrized curves and surfaces, including classical theorems as Green's Theorem for curves and Stokes and Divergence's Theorem for surfaces.				

Contingency plan	<p>1. Modifications to the contents</p> <p>There are no changes in contents.</p> <p>2. Methodologies</p> <p>*Teaching methodologies that are maintained</p> <p>Teaching methodologies are the same.</p> <p>*Teaching methodologies that are modified</p> <p>The type of teaching methodologies is the same, except for the fact that it becomes completely online. Moreover, there are changes in the evaluations.</p> <p>3. Mechanisms for personalized attention to students</p> <p>Students will be attended preferably by:</p> <ul style="list-style-type: none"> - Email: daily. - Moodle platform: daily, specially by means of the forums for questions and discussions of each of the topics of the subject. - Teams: for a direct interaction between students and profesor, in office hours or by appointment. <p>4. Modifications in the evaluation</p> <p>The homework and exercise, that will be defended by Teams, will gain weight in a virtual teaching scenario.</p> <p>*Evaluation observations:</p> <p>The students with recognition of part-time dedication and academic exemption from attendance will be assessed through the objective tests in the same conditions as the rest of the students.</p> <p>The second opportunity will be graded following the same criteria than in the first one.</p> <p>5. Modifications to the bibliography or webgraphy</p> <p>The main bibliographic sources are available via Moodle. Recommendations for references are unchanged, but use of sources available online will be preferred.</p>
-------------------------	--

Study programme competences	
Code	Study programme competences
A1	Skill for the resolution of the mathematical problems that can be formulated in the engineering. Aptitude for applying the knowledge on: linear algebra; geometry; differential geometry; differential and integral calculation; differential equations and in partial derivatives; numerical methods; algorithmic numerical; statistics and optimization
B1	That the students proved to have and to understand knowledge in an area of study what part of the base of the secondary education, and itself tends to find to a level that, although it leans in advanced text books, it includes also some aspects that knowledge implicates proceeding from the vanguard of its field of study
B2	That the students know how to apply its knowledge to its work or vocation in a professional way and possess the competences that tend to prove itself by the elaboration and defense of arguments and the resolution of problems in its area of study
B5	That the students developed those skills of learning necessary to start subsequent studies with a high degree of autonomy
B6	Be able to carrying out a critical analysis, evaluation and synthesis of new and complex ideas.

C4	Recognizing critically the knowledge, the technology and the available information to solve the problems that they must face.
----	---

Learning outcomes			
Learning outcomes	Study programme competences		
Identify mathematical concepts and tools to solve problems that can appear in an engineering context.	A1	B1 B2 B5 B6	C4
To show the ability of using techniques of Linear Algebra, Geometry and Calculus to be applied in problem solving.	A1	B1 B2 B5 B6	C4

Contents	
Topic	Sub-topic
Sets and functions in \mathbb{R}^n	Scalar and vector functions. Level sets. Continuity. Continuity in compact sets.
Differential Calculus	Directional derivative. Partial derivative. Differential of a function. Gradient vector. Jacobian matrix. Higher order derivatives. Introduction to vector calculus. Taylor polynomial for scalar functions. Critical points. Hessian matrix. Conditional extreme values. Lagrange multipliers.
Integral Calculus.	Double integrals. Triple integrals. Change of variables. Applications to the computation of areas and volumes.
Differential Geometry	Parameterized curves and line integrals. Integrals of vector functions. Gradient functions and conservative vector fields. Green's theorem. Parameterized surfaces. Rotational and divergence. Surface integrals. Stokes theorem. Divergence theorem.

Planning				
Methodologies / tests	Competencies	Ordinary class hours	Student's personal work hours	Total hours
Guest lecture / keynote speech	A1 B5 B6 C4	30	30	60
Mixed objective/subjective test	A1 B1 B2 B5 B6 C4	8	8	16
Supervised projects	A1 B1 B2 B5 B6 C4	0	10	10
Problem solving	A1 B1 B2 B5 B6 C4	30	30	60
Personalized attention		4	0	4

(*)The information in the planning table is for guidance only and does not take into account the heterogeneity of the students.

Methodologies

Methodologies	Description
Guest lecture / keynote speech	Oral exhibition complemented with the use of audiovisual means and some questions headed to the students, with the purpose to transmit knowledges and facilitate the learning
Mixed objective/subjective test	Written exam used for the evaluation of the learning, whose distinctive stroke is the possibility to determine if the answers given are or no correct. It constitutes an instrument of measure, elaborated rigorously, that allows to evaluate knowledges, capacities, skills, performance, aptitudes, attitudes, etc
Supervised projects	Homework that professors are going to asses during the course.
Problem solving	Technic by means of which one has to solve a specific problematic situation related to the contents of the subject.

Personalized attention

Methodologies	Description
Supervised projects	<p>The contents of the subject as well as the developed methodologies require that students work by themselves. This will generate some questions that they can ask during the classes or during the office hours.</p> <p>The students with recognition of part-time dedication and academic exemption from attendance can use the office hours as a reference in order to follow the course and the autonomous work.</p>

Assessment

Methodologies	Competencies	Description	Qualification
Mixed objective/subjective test	A1 B1 B2 B5 B6 C4	Written exam will be used to assess learning of the contents of the subject. The exam consists of three parts, the first one will be performed during the course as a partial exam. This part will be eliminatory and retrievable. The second part will be developed throughout the course by making homework and will be graded by assessing gained competences. The third part will be performed during the usual period of final exams and will assess the first, second and third parts.	80
Supervised projects	A1 B1 B2 B5 B6 C4	Homework that professors are going to asses during the course.	20

Assessment comments

<p>Students with recognition of part-time dedication and academic exemption from attendance will be graded under the same conditions than other students, as explained above.</p> <p>The second opportunity will be based on the same criteria than the first one.</p>

Recommendations

Subjects that it is recommended to have taken before
--

Mathematics 1/730G05001

Physics 1/730G05002

Subjects that are recommended to be taken simultaneously

Physics 2/730G05006

Subjects that continue the syllabus

Differential equations/730G05011

Other comments

Homework of this course will attend to the following: Preferably, virtual homework will be used, when printing is not required. In the case that paper is needed, then: No plastic materials will be used. Printing will be done both sides. Recycled paper will be used as possible. Unnecessary printed drafts will be avoided. In general, a sustainable use of natural resources will be done. Moreover, ethic principles related to sustainability will be followed.
