| General description      | <p>Natural gas is the fossil fuel with less environmental impact. It is the fuel of the present and the future to help reduce emissions. The natural gas passes through various processes from extraction to final consumption by users. One of these processes is the storage and regasification of LNG.</p> <p>In this sujet the regasification process is studied from the thermodynamic point of view to establish strategies to exploiting the energy released in this process. Software tools to optimize the process are used.</p> |        |                       |           |

## Study programme competences

| Code | Study programme competences                                                                                                                                                                                                              |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A13  | Capacidad para analizar, aplicar y optimizar los sistemas de aprovechamiento energético.                                                                                                                                                 |
| B1   | Que los estudiantes sepan aplicar los conocimientos adquiridos y su capacidad de resolución de problemas en entornos nuevos o poco conocidos dentro de contextos más amplios (o multidisciplinares) relacionados con su área de estudio. |
| B3   | Poseer y comprender conocimientos que aporten una base u oportunidad de ser originales en el desarrollo y/o aplicación de ideas, a menudo en un contexto de investigación.                                                               |
| B6   | Buscar y seleccionar alternativas considerando las mejores soluciones posibles.                                                                                                                                                          |
| B7   | Desarrollar las capacidades de análisis y síntesis; fomentar la discusión crítica, la defensa de argumentos y la toma de conclusiones.                                                                                                   |
| B9   | Extraer, interpretar y procesar información, procedente de diferentes fuentes, para su empleo en el estudio y análisis.                                                                                                                  |
| B11  | Adquirir nuevos conocimientos y capacidades relacionados con el ámbito profesional del máster.                                                                                                                                           |
| B13  | Aplicar los conocimientos teóricos a la práctica                                                                                                                                                                                         |
| B14  | Aplicar conocimientos de ciencias y tecnologías avanzadas a la práctica profesional o investigadora de la eficiencia                                                                                                                     |
| B16  | Valorar la aplicación de tecnologías emergentes en el ámbito de la energía y el medio ambiente.                                                                                                                                          |
| B18  | Plantear y resolver problemas, interpretar un conjunto de datos y analizar los resultados obtenidos; en el ámbito de la eficiencia energética y la sostenibilidad.                                                                       |
| C2   | Fomentar la sensibilidad hacia temas medioambientales.                                                                                                                                                                                   |
| C3   | Aplicar una metodología que fomente el aprendizaje y el trabajo autónomo.                                                                                                                                                                |

## Learning outcomes

| Learning outcomes                                                                                                                                                                              | Study programme competences |     |  |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|-----|--|
| Ability to analyze, implement and optimize energy utilization systems.                                                                                                                         | AJ13                        |     |  |
| That the students can apply their knowledge and their ability to solve problems in new or unknown environments within broader (or multidisciplinary) contexts related to their field of study. |                             | BC1 |  |
| Knowledge and understanding that provides a basis or opportunity to be original in the development and / or implementation of ideas.                                                           |                             | BC3 |  |
| Find and select the best alternative considering possible solutions.                                                                                                                           |                             | BC6 |  |

|                                                                                                                                 |  |      |     |
|---------------------------------------------------------------------------------------------------------------------------------|--|------|-----|
| Develop the capacities of analysis and synthesis; encourage critical discussion, arguments and making conclusions.              |  | BC7  |     |
| Extract, interpret and process information from different sources, for use in the study and analysis.                           |  | BC9  |     |
| Acquire new knowledge and skills related to the professional field of the master.                                               |  | BC11 |     |
| Apply theoretical knowledge into practice                                                                                       |  | BC13 |     |

## Assessment comments

A final exam for those students who do not participate in the continuous assessment of the subject throughout the course will be proposed. It allows to evaluate and verify the expected results in terms of global content of matter and verify the degree of achievement of the objectives. The overall final exam will consist of a test composed of 2 parts: a) theoretical (50%); b) practice (50%); with independent valuation, which is necessary to obtain a minimum of 3 points in each part purposed.
