| General description | Nesta materia preséntanse os fundamentos dos sistemas dixitais. Preténdese que o alumno adquira capacidade para analizar e deseñar circuitos combinacionais e secuenciais. Simboloxía, esquemas e deseño e simulación mediante VHDL. |        |                       |           |

## Study programme competences

| Code | Study programme competences                                                                                                                                                                                                                                                |
|------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| A26  | Cofecer os fundamentos e aplicacións da electrónica dixital e microprocesadores.                                                                                                                                                                                           |
| A29  | Capacidade para deseñar sistemas electrónicos analóxicos, dixitais e de potencia.                                                                                                                                                                                          |
| A30  | Cofecer e ser capaz de modelar e simular sistemas.                                                                                                                                                                                                                         |
| B1   | Capacidade de resolver problemas con iniciativa, toma de decisións, creatividade e razoamento crítico.                                                                                                                                                                     |
| B2   | Capacidade de comunicar e transmitir cofecementos, habilidades e destrezas no campo da enxeñaría industrial.                                                                                                                                                               |
| B3   | Capacidade de traballar nun contorno multilingüe e multidisciplinar.                                                                                                                                                                                                       |
| B4   | Capacidade de traballar e aprender de forma autónoma e con iniciativa.                                                                                                                                                                                                     |
| B5   | Capacidade para empregar as técnicas, habilidades e ferramentas da enxeñaría necesarias para a práctica desta.                                                                                                                                                             |
| B6   | Capacidade de usar adecuadamente os recursos de información e aplicar as tecnoloxías da información e as comunicacións na enxeñaría.                                                                                                                                       |
| B7   | Capacidade para traballar de forma colaborativa e de motivar un grupo de traballo.                                                                                                                                                                                         |
| B9   | CB2 - Que los estudiantes sepan aplicar sus conocimientos a su trabajo o vocación de una forma profesional y posean las competencias que suelen demostrarse por medio de la elaboración y defensa de argumentos y la resolución de problemas dentro de su área de estudio. |
| C2   | Utilizar as ferramentas básicas das tecnoloxías da información e as comunicacións (TIC) necesarias para o exercicio da súa profesión e para a aprendizaxe ao longo da súa vida.                                                                                            |

## Learning outcomes

| Learning outcomes                                                                                      | Study programme competences |    |    |

|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Methodologies                  | Description                                                                                                                                                                                                                                                                                                                                     |
| Guest lecture / keynote speech | O profesor guía aos alumnos aclarando os principais conceptos.                                                                                                                                                                                                                                                                                  |
| Problem solving                | Resolvense problemas ou exercicios propostos na aula ou da bibliografía. Pretendese que cada alumno realice un traballo previo a sesión na clase de forma individual.                                                                                                                                                                           |
| Laboratory practice            | Son sesións obrigatorias para todos os alumnos. Consistirán no deseño e simulación de circuitos dixitais. Requiren preparación previa antes da sesión no laboratorio, con un análise e deseño xustificado da solución adoptada en cada caso. O profesor revisará o traballo previo realizado así como o desenvolvemento na sesión de prácticas. |

|                                 |                                                                                                                                                                                                                                                                                                                                  |
|---------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Practical test:                 | Consiste no deseño e simulación en VHDL de circuitos dixitais.                                                                                                                                                                                                                                                                   |
| Mixed objective/subjective test | Corresponderá ben a unha proba de avaliación ao final do cuadrimestre, ben a probas repartidas ao longo do cuadrimestre, que englobarán todos os aspectos da materia tanto teóricos como prácticos e de resolución de problemas. Poden constar de cuestións teórico-prácticas, exercicios escritos e exercicios de programación. |

| Personalized attention                                                   |                                                                                                                                                                                                                             |

| Methodologies                   | Competencies | Description                                                                                                                                                                                                                                                                       | Qualification |
| Practical test:                 | A29 A30      | It consists of the design and simulation of digital circuits in VHDL using the ISE software. There will be two practical tests, the first will be done once the first 4 subjects are explained and the second coinciding with the final exam.                                     | 50            |
| Mixed objective/subjective test | B2           | Pode constar de cuestións teórico-prácticas e exercicios escritos, que englobarán todos os aspectos da materia tanto teóricos como prácticos e de resolución de problemas. Haberá dúas probas mixtas, a primeira unha vez explicados os 4 primeiros temas e outra no exame final. | 50            |

| Assessment comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>The scores for the evaluable tasks are only valid for the academic year in which they are made.</p> <p>Objective tests may include short-answer questions and / or test, problem solving on paper or circuit design with the ISE software.</p> <p>Final grade</p> <p>The final grade is usually calculated as:</p> <p>Final grade = 0.4 x objective test 1 grade + 0.6 x objective test 2 grade</p> <p>Those students who do not have qualification in the first objective test, or to resort very low score can choose to make the second objective test with a weight of 100% (the test will be different in this case). So in this case the final grade will be the the qualification of this test.</p> <p>Second opportunity</p> <p>The second time, an objective test that can consist of theoretical and practical questions, written exercises, issues and circuit design with the ISE software will be performed.</p> |
